INTRODUCTION

This service manual contains technical information which allow service personnel to understand and service the DVCPRO Studio VTR AJ-D940.

Specifications

AJ-D940_P

GENERAL

Power supply voltage	AC 120V, 50 – 60 Hz
Power consumption	215W (full operation)

Operating ambient temperature	41°F to 104°F (5°C to 40°C)
Operating ambient humidity	10% to 90% (no condensation)
Weight	37.84 lb (17.2 kg)
Dimensions	16-3/4" (W) × 6-15/16" (H) × 16-3/8" (D) (424 × 175 × 415 mm) (excluding unit's feet, jacks and jog dial)
Playback format	DVCPRO50/DVCPRO formats
Playback video signals	525i/625i selectable
Playback audio signals	DVCPRO50: 48 kHz, 16 bits, 4 channels DVCPRO: 48 kHz, 16 bits, 2 channels
Playback tracks	Digital/video/audio tracks: Helical tracks Time codes are recorded in sub-code area. Cue track: 1 track Control track: 1 track
Tape speed	67.640 mm/sec (525) 67.708 mm/sec (625)
Playback time	92 min. (using AJ-5P92LP)
Tape used	Metal tape
FF/REW time	Less than 3 min. (using AJ-5P92LP)
Search speed	±32× normal speed (color)
Digital slow	Plus direction: +1× for DVCPRO50 +2× for DVCPRO Minus direction: -1× for DVCPRO50 -2× for DVCPRO
Editing accuracy	±0 frame (using time code)
Tape timer accuracy	±1 frame (using continuous CTL signal)
Servo lock time	Less than 0.5 sec (color framing/standby ON)

VIDEO

Sampling frequencies	DVCPRO50 525i/625i: Y; 13.5 MHz/P _B , P _R ; 6.75 MHz
Quantizing	8 bits
Video compression method	DCT + adaptive quantizing + variable length code
Video compression rate	DVCPRO50: 1/3.3 DVCPRO: 1/5
Error correction	Reed-Solomon product code
Video recording bit rate	DVCPRO50: 50 Mbps DVCPRO: 25 Mbps

Analog Component Output Video

Video bandwidth (see Note 1)	525i: Y; 30 Hz to 5.5 MHz (±0.5 dB), 5.75 MHz (-2.0 dB) P _B , P _R ; 30 Hz to 2.5 MHz (±0.5 dB), 2.75 MHz (-2.0 dB) 625i: Y; 25 Hz to 5.5 MHz (±0.5 dB), 5.75 MHz (-2.0 dB) P _B , P _R ; 25 Hz to 2.5 MHz (±0.5 dB), 2.75 MHz (-2.0 dB) (Note 1: When playing back a tape recorded with digital input signals)
S/N ratio	Better than 60 dB
K factor (2T)	Less than 1%

Video Input Connectors

Reference input	Analog composite, BNC × 2, loop-through, 75Ω ON/OFF selectable
-----------------	----------------------------------------------------------------

Specifications

Video Output Connectors

Analog component output	BNC × 3 (Y, Pb, Pr) Y: 1.0 Vp-p, 75Ω Pb, Pr: 0.525/0.757 Vp-p switchable, 75Ω (75% color bar, 0% setup)
Analog composite output	BNC × 3, video 1, video 2, video 3 (superimpose ON/OFF)
Serial digital component output	BNC × 3, complies with the SMPTE259M-C standard SDI 1, SDI 2, SDI 3 (superimposed ON/OFF)
SDTI output (option)	BNC × 1, complies with the SMPTE305M standard (use of SDI 1 output connector shared)

Video Signal Adjustment Ranges

Video output gain	±3 dB
Video output chroma gain	±3 dB
Video output chroma phase	±30°
Video output setup	±14 IRE
Video output sync phase	±15 μsec
Video output SC phase	±180°

AUDIO

Digital Audio

Sampling frequency	48 kHz (synchronized with video)
Quantizing	16 bits
Frequency response	20 Hz to 20 kHz ±1.0 dB (at reference level)
Dynamic range	Better than 90 dB (1 kHz, emphasis OFF, A weighted)
Distortion	Less than 0.05% (1 kHz, emphasis OFF, reference level)
Crosstalk	Less than -80 dB (1 kHz, between 2 channels)
Wow & flutter	Below measurable limit
Head room	525i: 20 dB 625i: 18 dB
De-emphasis	T1 = 50 μsec, T2 = 15 μsec (selected automatically)

Cue Track

Frequency response	300 Hz to 6 kHz ±3 dB
--------------------	-----------------------

Audio Output Connectors

Analog output (CH1/CH2/CH3/CH4)	XLR × 4, low impedance, +4/0/-20 dBu, selectable using menu item setting
Digital output (CH1/CH2, CH3/CH4)	XLR × 2, AES/EBU format
Serial digital output	Complies with SMPTE259M-C/272M standard (BNC, 75Ω)
Cue track output	XLR × 1, low impedance, +4/0/-20 dBu, selectable using menu item setting
Monitor output	XLR × 2, low impedance, +4/0/-20 dBu, selectable using menu item setting
Headphones output	1/4" phone, 8Ω, variable level

Other Input/Output Signal Connectors

Time code output	XLR ×1, 2.0 Vp-p, low impedance
RS-422A input	D-sub 9-pin, RS-422A interface
RS-422A output	D-sub 9-pin, RS-422A interface
RS-232C	D-sub 25-pin, RS-232C interface
Parallel input/output	D-sub 25-pin
Encoder remote	D-sub 15-pin

Weight and dimensions shown are approximate.
Specifications are subject to change without notice.

IMPORTANT

"Unauthorized recording of copyrighted television programs, video tapes and other materials may infringe the right of copyright owners and be contrary to copyright laws."

AJ-D940_P

The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert the user to the presence of uninsulated "dangerous voltage" within the product's enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

CAUTION:

To reduce the risk of fire or shock hazard and annoying interference, use the recommended accessories only.

WARNING:

TO REDUCE THE RISK OF FIRE OR SHOCK HAZARD, DO NOT EXPOSE THIS EQUIPMENT TO RAIN OR MOISTURE.

CAUTION:

TO REDUCE THE RISK OF FIRE OR SHOCK HAZARD, REFER MOUNTING OF THE OPTIONAL BOARD TO AUTHORIZED SERVICE PERSONNEL.

FCC Note:

This device complies with Part 15 of the FCC Rules. To assure continued compliance follow the attached installation instructions and do not make any unauthorized modifications.

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

 is the safety information.

- Do not insert fingers or any objects into the video cassette holder.
- Avoid operating or leaving the unit near strong magnetic fields. Be especially careful of large audio speakers.
- Avoid operating or storing the unit in an excessively hot, cold, or damp environment as this may result in damage both to the unit and to the tape.
- Do not spray any cleaner or wax directly on the unit.
- If the unit is not going to be used for a length of time, protect it from dirt and dust.
- Do not leave a cassette in the unit when not in use.
- Do not block the ventilation slots of the unit.
- Use this unit horizontally and do not place anything on the top panel.
- Do not attempt to disassemble the unit. There are no user serviceable parts inside.
- If any liquid spills inside the recorder, have the unit examined for possible damage.
- Refer any needed servicing to authorized service personnel.

IMPORTANT

"Unauthorized recording of copyrighted television programs, video tapes and other materials may infringe the right of copyright owners and be contrary to copyright laws."

■ THIS APPARATUS MUST BE EARTHED

To ensure safe operation the three-pin plug must be inserted only into a standard three-pin power point which is effectively earthed through the normal house-hold wiring.

Extension cords used with the equipment must be three-core and be correctly wired to provide connection to earth. Wrongly wired extension cords are a major cause of fatalities.

The fact that the equipment operates satisfactorily does not imply that the power point is earthed and that the installation is completely safe. For your safety, if in any doubt about the effective earthing of the power point, consult a qualified electrician.

■ DO NOT REMOVE PANEL COVER BY UN-SCREWING

To reduce the risk of electric shock, do not remove cover. No user serviceable parts inside. And do not insert fingers or any other objects into the video cassette holder.

CAUTION:

Do not install or place this unit in a bookcase, built in cabinet or in another confined space in order to keep well ventilated condition. Ensure that curtains and any other materials do not obstruct the ventilation condition to prevent risk of electric shock or fire hazard due to overheating.

WARNING:

TO REDUCE THE RISK OF FIRE OR SHOCK HAZARD, DO NOT EXPOSE THIS EQUIPMENT TO RAIN OR MOISTURE.

CAUTION:

TO REDUCE THE RISK OF FIRE OR SHOCK HAZARD, AND ANNOYING INTERFERENCE, USE THE RECOMMENDED ACCESSOIRES ONLY.

CAUTION:

TO REDUCE THE RISK OF FIRE OR SHOCK HAZARD, REFER MOUNTING OF THE OPTIONAL BOARD TO QUALIFIED SERVICE PERSONNEL.

Operating precaution

Operation near any appliance which generates strong magnetic fields may give rise to noise in the video and audio signals. If this should be the case, deal with the situation by, for instance, moving the source of the magnetic fields away from the unit before operation.

 is the safety information.

Attention/Attentie

- This apparatus contains a lithium battery for memory back-up.
- For the removal of the battery at the moment of the disposal at the end of the service life please consult your dealer.
- Do not throw away the battery. Instead, hand it in as hazardous waste.
- Dit apparaat bevat een lithiumbatterij voor memory back-up.
- Raadpleeg uw leverancier over de verwijdering van de batterij op het moment dat u het apparaat bij einde levensduur afdankt.
- Gooi de batterij niet weg, maar lever hem in als KCA.

Caution for AC Mains Lead

FOR YOUR SAFETY PLEASE READ THE FOLLOWING TEXT CAREFULLY.

This product is equipped with 2 types of AC mains cable. One is for continental Europe, etc. and the other one is only for U.K.

Appropriate mains cable must be used in each local area, since the other type of mains cable is not suitable.

FOR CONTINENTAL EUROPE, ETC.

Not to be used in the U.K.

FOR U.K. ONLY

If the plug supplied is not suitable for your socket outlet, it should be cut off and appropriate one fitted.

FOR U.K. ONLY

This appliance is supplied with a moulded three pin mains plug for your safety and convenience.

A 13 amp fuse is fitted in this plug.

Should the fuse need to be replaced please ensure that the replacement fuse has a rating of 13 amps and that it is approved by ASTA or BSI to BS1362.

Check for the ASTA mark  or the BSI mark  on the body of the fuse.

If the plug contains a removable fuse cover you must ensure that it is refitted when the fuse is replaced.

If you lose the fuse cover the plug must not be used until a replacement cover is obtained.

A replacement fuse cover can be purchased from your local Panasonic Dealer.

IF THE FITTED MOULDED PLUG IS UNSUITABLE FOR THE SOCKET OUTLET IN YOUR HOME THEN THE FUSE SHOULD BE REMOVED AND THE PLUG CUT OFF AND DISPOSED OF SAFELY. THERE IS A DANGER OF SEVERE ELECTRICAL SHOCK IF THE CUT OFF PLUG IS INSERTED INTO ANY 13 AMP SOCKET.

If a new plug is to be fitted please observe the wiring code as shown below.

If in any doubt please consult a qualified electrician.

WARNING: THIS APPLIANCE MUST BE EARTHED.

IMPORTANT: The wires in this mains lead are coloured in accordance with the following code:

Green-and-Yellow:	Earth
Blue:	Neutral
Brown:	Live

As the colours of the wires in the mains lead of this appliance may not correspond with the coloured markings identifying the terminals in your plug, proceed as follows:

- The wire which is coloured GREEN-AND-YELLOW must be connected to the terminal in the plug which is marked with the letter E or by the Earth symbol  or coloured GREEN or GREEN-AND-YELLOW.
- The wire which is coloured BLUE must be connected to the terminal in the plug which is marked with the letter N or coloured BLACK.
- The wire which is coloured BROWN must be connected to the terminal in the plug which is marked with the letter L or coloured RED.

How to replace the fuse

1. Open the fuse compartment with a screwdriver.

2. Replace the fuse.

Specifications

AJ-D940_E

GENERAL

Power supply voltage	AC 220 – 240V, 50 – 60 Hz
Power consumption	215W (full operation)

Operating ambient temperature	5°C to 40°C
Operating ambient humidity	10% to 90% (no condensation)
Weight	17.4 kg
Dimensions	424 (W) × 175 (H) × 415 (D) mm (excluding unit's feet, jacks and jog dial)
Playback format	DVCPRO50/DVCPRO formats
Playback video signals	625i/525i selectable
Playback audio signals	DVCPRO50: 48 kHz, 16 bits, 4 channels DVCPRO: 48 kHz, 16 bits, 2 channels
Playback tracks	Digital/video/audio tracks: Helical tracks Time codes are recorded in sub-code area. Cue track: 1 track Control track: 1 track
Tape speed	67.708 mm/sec (625i) 67.640 mm/sec (525i)
Playback time	92 min. (using AJ-5P92LP)
Tape used	Metal tape
FF/REW time	Less than 3 min. (using AJ-5P92LP)
Search speed	±32× normal speed (colour)
Digital slow	Plus direction: +1× for DVCPRO50 +2× for DVCPRO Minus direction: -1× for DVCPRO50 -2× for DVCPRO
Editing accuracy	±0 frame (using time code)
Tape timer accuracy	±1 frame (using continuous CTL signal)
Servo lock time	Less than 0.5 sec (colour framing/standby ON)

VIDEO

Sampling frequencies	DVCPRO50 625i/525i: Y; 13.5 MHz/P _B , P _R ; 6.75 MHz
Quantizing	8 bits
Video compression method	DCT + adaptable quantizing + variable length code
Video compression rate	DVCPRO50: 1/3.3 DVCPRO: 1/5
Error correction	Reed-Solomon product code
Video recording bit rate	DVCPRO50: 50 Mbps DVCPRO: 25 Mbps

Analogue Component Output Video

Video bandwidth (see Note 1)	625i: Y; 25 Hz to 5.5 MHz (±0.5 dB), 5.75 MHz (-2.0 dB) P _B , P _R ; 25 Hz to 2.5 MHz (±0.5 dB), 2.75 MHz (-2.0 dB) 525i: Y; 30 Hz to 5.5 MHz (±0.5 dB), 5.75 MHz (-2.0 dB) P _B , P _R ; 30 Hz to 2.5 MHz (±0.5 dB), 2.75 MHz (-2.0 dB) (Note 1: When playing back a tape recorded with digital input signals)
S/N ratio	Better than 60 dB
K factor (2T)	Less than 1%

Video Input Connectors

Reference input	Analogue composite, BNC × 2, loop through, 75Ω ON/OFF selectable
-----------------	------------------------------------------------------------------

Specifications

AJ-D940_E

Video Output Connectors

Analogue component output	BNC × 3 (Y, P _B , P _R) Y: 1.0 Vp-p, 75Ω P _B , P _R : 0.7 Vp-p, 75Ω (100% colour bar)
Analogue composite output	BNC × 3, video 1, video 2, video 3 (superimpose ON/OFF)
Serial digital component output	BNC × 3, complies with the EBU Tech. 3267-E standard SDI 1, SDI 2, SDI 3 (superimposed ON/OFF)
SDTI output (option)	BNC × 1, complies with the SMPTE 305M standard (use of SDI 1 output connector shared)

Video Signal Adjustment Ranges

Video output gain	±3 dB
Video output chroma gain	±3 dB
Video output chroma phase	±30°
Video output setup	±100 mV
Video output sync phase	±15 μsec
Video output SC phase	±180°

AUDIO

Digital Audio

Sampling frequency	48 kHz (synchronized with video)
Quantizing	16 bits
Frequency response	20 Hz to 20 kHz ±1.0 dB (at reference level)
Dynamic range	Better than 90 dB (1 kHz, emphasis OFF, "A" weighted)
Distortion	Less than 0.05% (1 kHz, emphasis OFF, reference level)
Crosstalk	Less than -80 dB (1 kHz, between 2 channels)
Wow & flutter	Below measurable limit
Head room	625i: 18 dB 525i: 20 dB
De-emphasis	T1 = 50 μsec, T2 = 15 μsec (selected automatically)

Cue Track

Frequency response	300 Hz to 6 kHz ±3 dB
--------------------	-----------------------

Audio Output Connectors

Analogue output (CH1/CH2/CH3/CH4)	XLR × 4, low impedance, +4/0/-20 dBu, selectable using menu item setting*
Digital output (CH1/CH2, CH3/CH4)	XLR × 2, AES/EBU format
Serial digital output	Complies with EBU Tech. 3267-E standard (BNC, 75Ω)
Cue track output	XLR × 1, low impedance, +4/0/-20 dBu, selectable using menu item setting*
Monitor output	XLR × 2, low impedance, +4/0/-20 dBu, selectable using menu item setting*
Headphones output	6.35 mm, 8Ω, variable level

Other Input/Output Signal Connectors

Time code output	XLR × 1, 2.0 Vp-p, low impedance
RS-422A input	D-sub 9-pin, RS-422A interface
RS-422A output	D-sub 9-pin, RS-422A interface
RS-232C	D-sub 25-pin, RS-232C interface
Parallel input/output	D-sub 25-pin
Encoder remote	D-sub 15-pin

Weight and dimensions shown are approximate.
Specifications are subject to change without notice.

* EG model is fixed to -3 dBu.

SAFETY PRECAUTIONS

GENERAL GUIDELINES

1. When servicing, observe the original lead dress. If a short circuit is found, replace all parts which have been overheated or damaged by the short circuit.
2. After servicing, see to it that all the protective devices such as insulation barriers, insulation papers shields are properly installed.
3. After servicing, make the following leakage current checks to prevent the customer from being exposed to shock hazards.

LEAKAGE CURRENT COLD CHECK

1. Unplug the AC cord and connect a jumper between the two prongs on the plug.
2. Measure the resistance value, with an ohmmeter, between the jumpered AC plug and each exposed metallic cabinet part on the equipment such as screwheads, connectors, control shafts, etc. When the exposed metallic part has a return path to the chassis, the reading should be between $1\text{M}\Omega$ and $5.2\text{M}\Omega$.

When the exposed metal does not have a return path to the chassis, the reading must be ∞ .

Figure 1

LEAKAGE CURRENT HOT CHECK (See Figure 1.)

1. Plug the AC cord directly into the AC outlet.
Do not use an isolation transformer for this check.
2. Connect a $1.5\text{k}\Omega$, 10W resistor, in parallel with a $0.15\mu\text{F}$ capacitor, between each exposed metallic part on the set and a good earth ground such as a water pipe, as shown in Figure 1.
3. Use an AC voltmeter, with 1000 ohms/volt or more sensitivity, to measure the potential across the resistor.
4. Check each exposed metallic part, and measure the voltage at each point.
5. Reverse the AC plug in the AC outlet and repeat each of the above measurements.
6. The potential at any point should not exceed 0.75 volts RMS . A leakage current tester (Simpson Model 229 equivalent) may be used to make the hot checks, leakage current must not exceed $1/2\text{ milliamp}$. In case a measurement is outside of the limits specified, there is a possibility of a shock hazard, and the equipment should be repaired and rechecked before it is returned to the customer.

ELECTROSTATICALLY SENSITIVE (ES) DEVICES

Some semiconductor (solid state) devices can be damaged easily by static electricity. Such components commonly are called Electrostatically Sensitive (ES) Devices. Examples of typical ES devices are integrated circuits and some field-effect transistors and semiconductor "chip" components. The following techniques should be used to help reduce the incidence of component damage caused by static electricity.

1. Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any electrostatic charge on your body by touching a known earth ground.
Alternatively, obtain and wear a commercially available discharging wrist strap device, which should be removed for potential shock reasons prior to applying power to the unit under test.
2. After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.
3. Use only a grounded-tip soldering iron to solder or unsolder ES devices.
4. Use only an anti-static solder removal device classified as "anti-static" can generate electrical charges sufficient to damage ES devices.
5. Do not use freon-propelled chemicals. These can generate electrical charges sufficient to damage ES devices.
6. Do not remove a replacement ES device from its protective package until immediately before you are ready to install it. (most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material).
7. Immediately before removing the protective material from the leads of a replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed.
CAUTION: Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.
8. Minimize bodily motions when handling unpackaged replacement ES devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity sufficient to damage an ES device).

X-RADIATION

WARNING

1. The potential source of X-Radiation in EVF sets is the High Voltage section and the picture tube.
2. When using a picture tube test jig for service, ensure that jig is capable of handling 10kV without causing X-Radiation.

NOTE: It is important to use an accurate periodically calibrated high voltage meter.

3. Measure the High Voltage. The meter (electric type) reading should indicate 2.5kV , $\pm 0.15\text{kV}$. If the meter indication is out of tolerance, immediate service and correction is required to prevent the possibility of premature component failure. To prevent an X-Radiation possibility, it is essential to use the specified picture tube.

Power cord.....1 pc

Options

- AJ-CS750P cassette adapter
- AJ-MA75P rack-mounting adapters

Introduction and Features

The AJ-D940 is a multi-purpose studio digital VTR which uses 1/4-inch wide compact cassette tapes and which is designed exclusively for slow-motion playback with a high picture quality at a 50 Mbps video recording rate. It is capable of playing back existing DVCPRO (25 Mbps) cassette tapes as well. It is equipped with a 525/625 switchable function to enable it to be operated as a studio VTR anywhere in the world.

This VTR with its high picture quality, which is due to the incorporation of digital compression technology, significantly reduces the deterioration in the quality of both sound and pictures which accompanies dubbing operations. Its compact 4U size and light-weight design makes it easy for the unit to be carried around and installed in a 19-inch rack.

A dialogue system enables the unit's setup settings to be performed while monitoring the on-screen menus that appear on the TV monitor.

Features

Compact size and light weight

This digital VTR has a 4U size. This means that it is easy to install it in a 19-inch rack, too, if the rack-mounting adapters (optional accessory, AJ-MA75P) are used.

Up to 92 minutes of playback time

Two sizes of cassette tape, the M size (for up to 33 minutes of playback time) and L size (for up to 92 minutes of playback time), can be used with this unit.

The tape has a 1/4-inch width for a compact design.

High picture quality

A high picture quality is achieved using 4:2:2 component signals whose recording rate is twice as high as that of the existing DVCPRO format.

525i/625i switchable function

By setting the 525i/625i selector switch to the setting that corresponds to the TV system of the signals (525i or 625i) recorded on the tape, the signals of either TV system can be played back.

Compatibility with DVCPRO format

Tapes recorded using the existing DVCPRO format can be played back on this unit.

Compatibility with general consumer video equipment

Cassette tapes designed for general consumer applications containing material shot by a consumer digital camera can be played back on this unit if the cassette adapter (optional accessory, AJ-CS750P) is used.

<Note>

Tapes recorded in the LP consumer mode cannot be played back.

Digital slow motion/dial jog functions

Using Panasonic's very own digital slow-motion technology, pictures played back in slow motion at the following speeds can be reproduced clearly.

DVCPRO50 (50 Mbps): -1x to +1x speed

DVCPRO (25 Mbps): -2x to +2x speed

DV: ±0.03x, ±0.07x, ±0.1x, ±0.2x, ±0.4x to ±1x

Dial shuttle function

Shuttle operations enable color pictures to be played back in the forward or reverse direction at a maximum of 32 times the normal tape speed.

Time code

The unit contains a time code reader (TCR).

Features

(continued)

Multi-functional interface capability

- **Serial digital output**
The unit is equipped with a component serial interface connector to enable interfacing with serial digital component signals. (SMPTE 259M-C, 272M)
- **Analog video output**
Both component (Y, P_B, P_R) and composite output connectors are provided.
- **AES/EBU audio output**
The unit comes with digital audio output connectors.
- **SDTI output (option)**
- **9-pin RS-422A/RS-232C remote**
In addition to the standard 9-pin serial remote (RS-422A) connector, both RS-232C and 25-pin parallel remote connectors are provided.

4-channel digital audio for high sound quality

A 4-channel PCM audio capability plus another channel for the analog cue track is featured.

Menu-operated setup

The settings for the setup prior to operating the unit are performed while viewing the setup menus which appear on the unit's display or the TV monitor.

Parts and Their Functions

Front panel

<Front panel top area>

❶ POWER switch

❷ TV system and format display

The selected TV system and format are displayed here.

<525/625>

525: This lights when the 525 TV system is selected.

625: This lights when the 625 TV system is selected.

<25 Mbps/50 Mbps>

25 Mbps: This indicates the DVCPRO (25 Mbps) and DV playback mode.

In the case of the DVCPRO (25 Mbps) playback mode, the DVCPRO (25 Mbps) cassette playback display lamp ❸ in the center of the front panel also lights.

50 Mbps: This indicates the DVCPRO50 (50 Mbps) playback mode.

❸ Cassette insertion slot

❹ EJECT button

When this button is pressed, the tape inside is unloaded and several seconds later it is automatically ejected.

If the counter display area is set to the CTL display, the display will be reset.

❺ Channel condition lamps

One of these lamps lights in accordance with the error rate statuses. (Green→Amber→Red)

Green: This lamp lights when the error rates for both the video and audio playback signals are at an acceptable level.

Amber: This lamp lights when the error rate for either the video and audio playback signals has deteriorated. A normal playback picture will appear even when this lamp is lighted.

Red: This lamp lights when either the video or audio playback signals are subject to correction or interpolation.

❻ AUTO OFF lamp

This lights when trouble has occurred in the unit's operation.

Parts and Their Functions (continued)

<Front panel center>

❶ PLAY button

This button is pressed to commence playback.

❷ STOP button

This button is pressed to stop the tape travel.

The tape drum continues to rotate even in the stop mode, and the tape remains in close contact with the drum.

When the stop mode continues beyond the prescribed period of time, the unit is automatically set to the standby OFF mode in order to protect the tape.

The stop mode is established immediately after a cassette has been inserted into the unit.

❸ FF button (see *1)

This button is pressed to fast forward the tape.

❹ REW button (see *1)

This button is pressed to rewind the tape.

❺ SERVO lamp

This lamp lights when the drum servo and capstan servo lock.

❻ STANDBY button

While the same level of tape tension is applied as in the regular stop mode and the head drum continues to rotate, the lamp in the button lights to indicate that the standby ON mode is established.

The tape is set to the half-loading mode when the standby OFF mode is established. When this button is pressed in the stop mode, the standby OFF mode is established and the tape is set to the half-loading mode. At this time, the lamp in the button will go off.

When the stop mode continues beyond the prescribed period of time, the unit is automatically set to the standby OFF mode in order to protect the tape.

When either this button or the STOP button is pressed in the standby OFF mode, the standby ON mode is established. When a function button other than the STOP button is pressed, the tape will be set to the mode corresponding to the pressed button.

The time taken for operation to transfer to the standby OFF mode can be set on-screen.

❽ TC/CTL switch

When this switch is pressed, what appears on the counter display changes from TC to CTL or vice versa. When TC is selected, either the TC or UB value will be displayed depending on the position to which the TC/UB switch has been set.

❾ TC/UB switch

This selector switch is used to indicate either the TC value or UB value on the counter display area when the TC/CTL switch has been set to the TC position.

❿ REMOTE/LOCAL switch

This switch is provided to enable the unit to be controlled from an external source using the REMOTE, RS-232C or parallel connector.

REMOTE: Set here when the unit is to be controlled using the 9-pin REMOTE, RS-232C or parallel remote connector.

LOCAL: Set here when the unit is to be controlled using the controls on its operation panel.

*1 The fast forward or rewind speed can be selected using setup menu item No. 102 (FF.REW MAX).

<Front panel center>

⑫ REMOTE lamp

This lamp lights when the REMOTE setting has been selected by the REMOTE/LOCAL switch.

⑬ Search button

This button is pressed to establish the search mode.

When this button is pressed after the search dial is set to the shuttle mode and turned to the desired position, playback will commence at the speed which has been set by the search dial.

⑭ JOG, SHTL and SLOW lamps

These lamps indicate the current status of the search dial and SHTL/SLOW switch.

JOG: This lights when the JOG mode is established.

SHTL (shuttle): This lights when the SHTL mode is established.

SLOW: This lights when the VAR mode is established.

⑮ SHTL/SLOW switch

This selector switch is set when the search dial is to be used for SHTL or VAR purposes.

⑯ REV, STILL and FWD lamps

These lamps light in accordance with the search dial operation.

REV: This lights when the dial is rotated counterclockwise, and if the search button lamp is also lighted at this time, the tape travels in the reverse direction.

STILL: In the JOG mode this lights when the dial rotation is stopped, and if the search button lamp is also lighted at this time, the tape also stops traveling. In the shuttle mode, it lights when the dial is at the STILL position.

FWD: This lights when the dial is rotated clockwise, and if the search button lamp is also lighted at this time, the tape travels in the forward direction.

⑰ Search dial

This dial is used to locate the edit points.

Each time the dial is pressed, the shuttle mode or jog mode is selected alternately, and the JOG, SHTL or SLOW lamp lights.

When the unit's power is turned on, the search dial will not work unless it is first returned to the STILL position.

SHTL (shuttle) mode: If the dial is rotated and stopped at the desired position when the SHTL/SLOW switch has been set to SHTL, the tape can be played back at the speed that corresponds to the angle to which the dial has been rotated. A still picture will appear when the dial is set to its center position.

When the SHTL/SLOW switch has been set to SLOW, the tape will travel at the $-4.1\times$ speed if the dial is rotated counterclockwise as far as it will go, a still picture will appear when it is set to its center position, and the tape will travel at the $+4.1\times$ speed if the dial is rotated clockwise as far as it will go. The maximum speed at the SLOW setting can be selected by setup menu item No. 320 (VAR FWD MAX) or No. 321 (VAR REV MAX).

Jog mode: The dial's clickstop positions are cleared, and the tape is played back at the speed (see *1) that corresponds to the speed with which the dial is rotated.

*1 DVCPRO50 (50 Mbps): $-1\times$ to $+1\times$ speed

DVCPRO (25 Mbps): $-2\times$ to $+2\times$ speed

DV: $-1\times$ to $+1\times$ speed

Parts and Their Functions (continued)

<Front panel center>

⑱ PREROLL button

This button is used to cue the tape for a transmission, etc.

If it is pressed when a CUE point has been selected (when the CUE lamp is flashing), the tape is prerolled to the CUE point, and a still picture appears on the screen.

If it is pressed when a CUE point has not been selected, the tape will be prerolled from the point where the button was pressed, and a still picture will appear on the screen.

• The preroll time can be set using setup menu item No. 000 (P-ROLL TIME).

⑲ CUE UP button

This button is used to cue the tape for a transmission, etc.

If it is pressed when a CUE point has been selected (when the CUE lamp is flashing), the tape is prerolled to the CUE point, and a still picture appears on the screen.

If it is pressed when a CUE point has not been selected, the tape will be prerolled from the point where the button was pressed, and a still picture will appear on the screen.

• The preroll time can be set using setup menu item No. 016 (CU-ROLL TIME).

⑳ CUE buttons 1 through 8

These buttons are used to enter, check or erase cue points.

When a button is pressed at a cueing position on the tape, the cue point will be entered in that button.

To check a cue point which has been entered, press the CUE button in which the point was entered.

To erase a cue point, press the RESET button while holding down the CUE button.

㉑ SET button

This button is used when cue points are to be entered or erased.

When it is pressed at the cueing position, the cue point will be entered and the corresponding CUE button's lamp will light. When it is pressed at positions to which the tape is successively cued, the CUE buttons in which no cue points have been entered will light in sequence starting with the lowest number, and the cue points will be entered.

When the RESET button is pressed while the SET button is held down, all the registered cue points will be deleted.

㉒ Counter display area

The TC and CTL count values as well as the messages and other on-screen information appear on the counter display area.

㉓ RESET button

When this button is pressed in the CTL mode, the display is cleared to "00:00:00:00."

㉔ Warning lamp

This lamp lights when a warning is issued.

㉕ Cassette insertion display lamp

This lamp lights when a cassette has been inserted into the unit.

㉖ DVCPRO (25 Mbps) cassette playback display lamp

This lamp lights when a cassette recorded using the DVCPRO (25 Mbps) format is played back.

㉗ SCH lamp

This lamp lights when the SCH phase of the external sync signal is within the specified range.

<Front panel center>

① CF lamp

This lamp lights when the color framing is locked.

② Level meter

The playback levels for channels 1, 2, 3 and 4 of the PCM audio signals and for the cue track signals are displayed by this meter.

③ Audio output level controls

These controls are used to adjust the playback levels for channels 1, 2, 3 and 4 of the PCM audio signals and for the cue track signals. They use a "pull to vary level" system which means that the levels can be adjusted after they have been pulled up. The unity (default) levels apply when they are pushed down.

④ Headphones jack

When a pair of stereo headphones are connected to this jack, the sound being played back can be monitored through the headphones.

⑤ Volume control

This control is used to adjust the headphones volume and monitor output volume. Setup menu item No. 713 (MONI OUT) can be used to set whether the headphones output and monitor output are to be linked together or separated. (However, the headphones are always linked to the monitor output.) When the two outputs are separated, the monitor output is set the unity (default) level.

⑥ MONITOR SELECT switches

These switches are used to select the audio signals which are to be output to the monitor L and R channels.

Each time the "L" button is pressed, the signals which are to be output to the monitor L channel are switched in the following sequence: CH1, CH2, CH3, CH4, CUE, CH1, etc.

[This switching is disabled when CH1+2 or CH3+4 has been selected as the setup menu item No. 729 (MONI MIX L) setting.]

Each time the "R" button is pressed, the signals which are output to the monitor R channel are switched in the following sequence: CH1, CH2, CH3, CH4, CUE, CH1, etc.

[This switching is disabled when CH1+2 or CH3+4 has been selected as the setup menu item No. 730 (MONI MIX R) setting.]

The signals which have been selected are indicated by the L or R lamps which light on the level meter display area. [When AUTO has been selected as the setup menu item No. 721 (MONI CH SEL) setting, the display is switched in tandem with the monitor output.]

⑦ METER (FULL/FINE) selector switch

This switch is used to select the scale display on the audio level meter.

FULL mode: The standard scale (ranging from $-\infty$ to 0 dB) is selected.

FINE mode: The scale in 0.5 dB increments is selected.

Parts and Their Functions (continued)

<Front panel bottom>

⑧ ENCODER CONTROL switch

This switch is used to select whether the adjustments of the video output signals are to be performed using the controls either on the unit or on an external encoder remote controller.

REMOTE: The video output signals are adjusted using the controls on the external encoder remote controller.

LOCAL: The video output signals are adjusted using the controls on the unit.

⑨ VIDEO LEVEL control and switch

These enable the video level to be adjusted when the ENCODER CONTROL switch has been set to the LOCAL position.

When the VIDEO LEVEL switch is set to PRESET, the video level is set to the unity (0 dB) level. When it is set to MANUAL, the video level can be adjusted using the control.

⑩ CHROMA LEVEL control and switch

These enable the chroma level to be adjusted when the ENCODER CONTROL switch has been set to the LOCAL position.

When the CHROMA LEVEL switch is set to PRESET, the chroma level is set to the unity (0 dB) level. When it is set to MANUAL, the chroma level can be adjusted using the control.

⑪ SET UP LEVEL control and switch

These enable the setup level to be adjusted when the ENCODER CONTROL switch has been set to the LOCAL position.

When the SET UP LEVEL switch is set to PRESET, the setup level is set to the unity (0 IRE) level. When it is set to MANUAL, the set-up level can be adjusted using the control.

⑫ HUE LEVEL control and switch

These enable the hue to be adjusted when the ENCODER CONTROL switch has been set to the LOCAL position.

When the HUE LEVEL switch is set to PRESET, the hue is set to the unity (0°) level. When it is set to MANUAL, the hue can be adjusted using the control.

⑬ CF switch

This switch is used to select either 4- or 8-field or 2-field increments for the playback framing lock.

4F/8F: 525 mode = The framing is locked in 4-field increments.

625 mode = The framing is locked in 4 or 8-field increments. The setup menu item No. 108 (CAP.LOCK) setting is used to switch between 4-field or 8-field increments.

2F: The framing is locked in 2-field increments.

⑭ TV SYSTEM selector switch

This switch is used to select the TV system. For this setting to take effect, the power must be turned off and then turned back on.

525: The 525 interlace/59.94 Hz TV system is selected.

625: The 625 interlace/50 Hz TV system is selected.

For playback, make sure that the switch is set to the position that corresponds to the TV system, 525i or 625i, which was used when the tape was recorded.

<Front panel bottom>

⑭ MENU button

When this button is pressed, the setup menu appears on the TV monitor (but only when the VIDEO OUT 3 connector is used), and the setup menu number appears on the unit's display. When it is pressed again, the setup menu setting is exited and the original operation is restored.

⑮ SET button

When this button is pressed, the data which has been set on the setup menu is entered. After the data has been entered, the setup menu setting is exited and the original operation is restored.

⑯ DIAG button

When this button is pressed, the VTR information is displayed. When it is pressed again, the original display is restored.

The VTR information consists of the HOUR METER information and WARNING information. The search button is pressed to switch between the displays of the two types of information.

Displayed on the HOURS METER screen are the deck's serial number, power-on time, drum rotation time, tape travel time, number of times the cassette has been loaded, and the number of times the power has been switched on and off.

Displayed on the WARNING screen is the nature of the warnings issued.

Parts and Their Functions

Connector panel

<Connector panel>

❶ AC IN socket

This is connected to the power outlet using the accessory power cord.

❷ SIGNAL GND terminal

This is connected to the signal ground terminal on the connected component for noise reduction purposes. It is not a safety ground.

❸ Fuse holder

This contains a fuse.

❹ Fan motor

This motor drives the fan that cools down the unit.

The ❶ lamp lights when trouble in some form or other has caused the fan motor to shut down. If operation is continued while this warning condition persists, the temperature inside the deck will rise, and once it has exceeded the safe temperature level, all the unit's operations will be shut down.

❺ TIME CODE OUT connector

The playback time code signals are output from this connector.

❻ CUE OUT connector

The analog signals recorded on the CUE track are output from this connector.

❼ MONITOR OUT connectors

The PCM audio signals of CH1, CH2, CH3 and CH4 or the playback signals from the CUE track are output from this connector.

❽ REF VIDEO IN connectors and 75Ω termination switch

These are the input connectors for the reference video signal.

Supply a composite video signal such as a black burst signal complying with the broadcast standards (see *1). Set the switch to ON for a 75Ω termination.

*1 525: RS-170A

625: CCIR624

❾ ANALOG AUDIO OUT connectors

The analog audio signals are output from these connectors.

❿ ANALOG COMPONENT VIDEO OUT connectors

The analog component video signals are output from these connectors.

⓫ ANALOG COMPOSITE VIDEO OUT connectors

The analog composite video signals are output from these connectors. Video signals with superimposed characters can be output from the VIDEO OUT 3 connector. Use setup menu item No. 007 (SUPER) to select ON or OFF as the superimposed character setting.

⓬ DIGITAL AUDIO OUT connectors

Digital audio signals complying with the AES/EBU standards are output from these connectors.

⓭ SERIAL DIGITAL COMPONENT AUDIO/VIDEO OUT connectors

Digital component audio and video signals complying with the SMPTE 259M-C/272M standards are output from these connectors.

Parts and Their Functions (continued)

<Connector panel>

❶ Remote control connectors

The unit can be operated from an external source when it is connected with another player for deck-to-deck editing or with an external controller. There are two remote control connectors, one for input signals (IN) and the other for output signals (OUT).

IN: To be connected with an external controller.

To be connected for deck-to-deck operations.

OUT: To be connected for parallel run operations.

To be used for loop-through applications.

❷ ENCODER REMOTE connector

This is connected to an external encoder remote controller when the video output signal settings are to be adjusted from an external source.

❸ RS-232C connector

❹ PARALLEL REMOTE connector

This is used when the unit is to be operated from an external source.

Connections using one unit

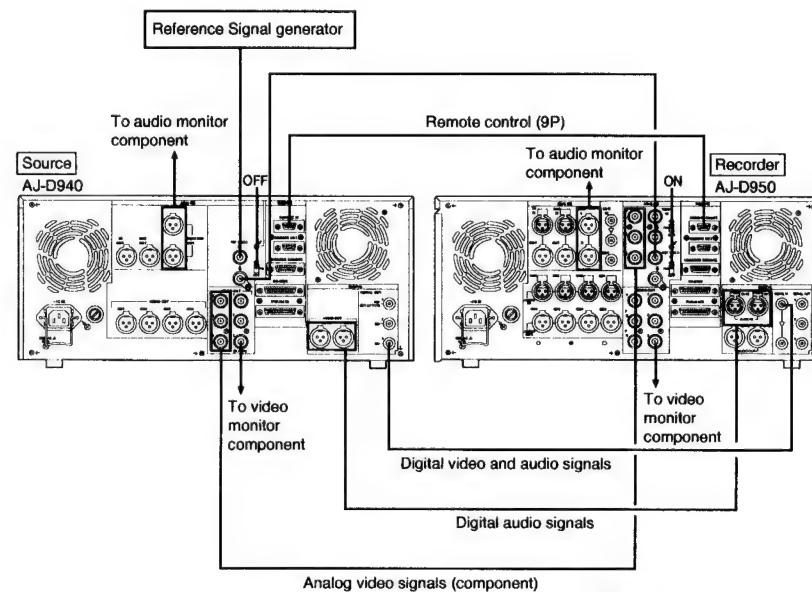

Set the CONTROL switch on the front panel to LOCAL.

Example of connections when the unit is used as the source machine for editing (deck-to-deck editing)

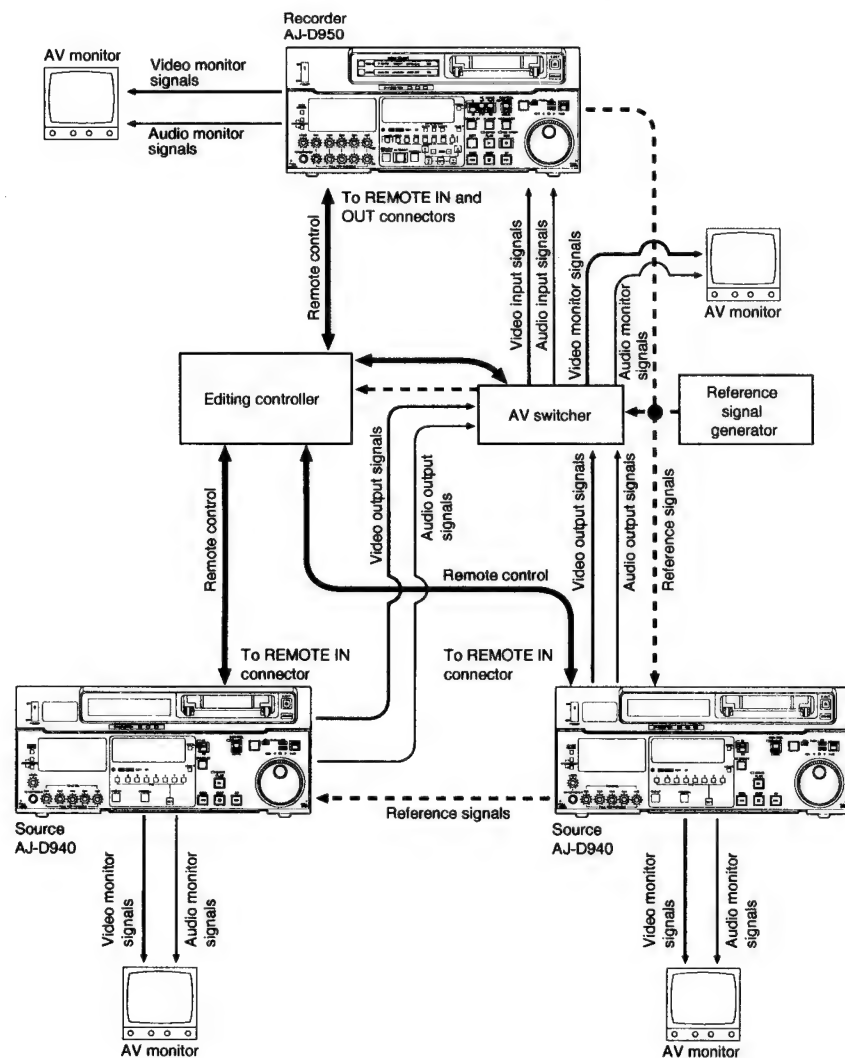

Source unit: Set the CONTROL switch on the front panel to REMOTE.

Recorder unit: Set the CONTROL switch on the front panel to LOCAL.

AJ-D950:
The analog input/output signal interface kit board (optional accessory) must be installed for use.

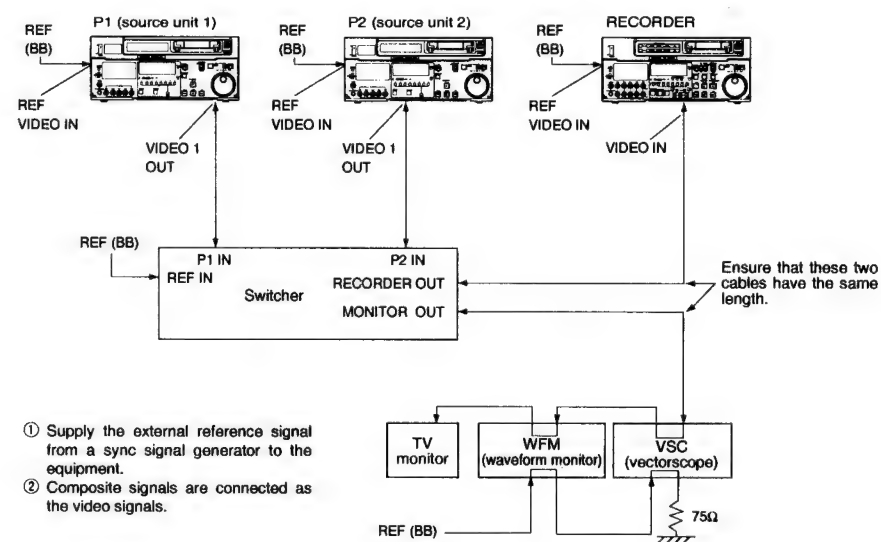

Example of connections with an editing controller

<Note>

If an editing controller made by CMX is to be used, steps must be taken at the editing controller side to support it.

Connections for adjusting the video output signals (encoder output)

- ① Supply the external reference signal from a sync signal generator to the equipment.
- ② Composite signals are connected as the video signals.

Tapes

Type	Description
Consumer cassette (S size cassette)	These tapes are exclusively used with general consumer camera/recorders. They can be played back on the unit if a cassette adapter AJ-CS750P (available as an optional accessory) is used. However, bear in mind that long-playing cassette tapes (80 minutes in the standard mode; 120 minutes in the LP mode) cannot be used. It is recommended that Panasonic's DV tapes for general consumer applications be used. Bear in mind that inserting one of these cassette tapes without first installing the cassette adapter will cause malfunctioning.
M size cassette	Tapes with a maximum playback time of 33 minutes. (AJ-5P23MP, AJ-5P33MP)
L cassette	<div> <div>DVCPRO (50 Mbps)</div> <div>For consumer use</div> </div> Tapes with a maximum playback time of 92 minutes. (AJ-5P63LP, AJ-5P92LP) Standard playback cassette tapes for consumer use. For playback, select DV as the setup menu item No. 014 (FORMAT SEL) setting. Use of Panasonic's consumer-use DV tapes is recommended.

Align the cassette with the center of the insertion slot, and gently push it inside. The cassette tape is automatically loaded.

<Note>

For AJ-5P92LP cassette tapes recorded using the DVCPRO (25 Mbps) mode, use a VTR supporting DVCPRO (25 Mbps) 184 minute tapes.

<Precautions when playing back general consumer DV tapes>

- General consumer tapes recorded in the LP mode cannot be played back.
- When material recorded on a general consumer tape is to be edited, either use a DVCPRO50 (50 Mbps) or DVCPRO (25 Mbps) tape or record the material on another VTR used for broadcast applications.
- The maximum speed at which general consumer tapes can be advanced is 32 times the normal tape speed.
- The maximum still mode time for general consumer tapes is set to 10 seconds.
- Loading up a general consumer tape at the same position should be kept to the minimum in order to protect the tape from damage.
- The maximum time for STILL TIMER when a general consumer tape is used is set to 10 seconds, and the total time during which such a tape may be left standing in the STILL mode is set to 1 minute.

Switching on the Power/Inserting the Cassette

Before starting to operate the unit, check that the equipment has been connected properly.

- 1 Turn on the power.
- 2 Check that the AUTO OFF lamp is off. In the event of condensation or other trouble, the AUTO OFF lamp lights, and all of the unit's operations are disabled.
- 3 Insert the cassette tape. Insert the tape into the prescribe position without forcing it in any way.
- 4 Check that the STOP lamp is lighted. When the tape is inserted, the cylinder starts rotating automatically, the tape is loaded, and the STOP mode is established. The EJECT lamp now goes off.

STOP/STANDBY mode

- 1** The stop mode is established when the STOP button is pressed.
The STOP lamp lights, and the tape stops traveling.
 - In order to protect the tape, the standby OFF mode is established after the time set in setup menu item No. 400 (STILL TIMER) has elapsed.
When the STOP, REW, FF or PLAY button is pressed, the corresponding mode is established.
- 2** When the STANDBY button is pressed, the standby ON or OFF mode is established.
The standby ON mode is established while the button's lamp is lighted.
When the button is pressed in the stop mode, the standby OFF mode is established, the tape is set to the half-loading status, and the button's lamp goes off.
When the button is pressed in the standby OFF mode, the standby ON mode is established.

<Precautions for the STILL TIMER setting>

- Remember that at times when the same material is repeatedly used such as when programs are aired, the cumulative standby time in the same position will be increased.
- In order to protect the tape, make the standby time at the same tape locations as short as possible: for instance, select a maximum of 30 seconds or so as the setup menu item No. 400 (STILL TIMER) setting.

Playback

- 1** Insert the cassette tape and set the unit to the STOP mode.
- 2** Press the PLAY button. Normal playback now commences.
- 3** Adjust the audio playback levels. Pull out the audio level controls, and turn them clockwise or counterclockwise to adjust the levels. Normally, they are kept at their pushed-in positions (unity level).
- 4** To end playback, press the STOP button.
The unit is now set to the stop mode.

<Note>

Check that the SERVO lamp remains lighted during playback. The playback pictures will be disturbed if the lamp is flashing or off.

Jog/Shuttle

Jog mode

- 1 Push the search dial to set it to its "in" position. Check that the JOG lamp is lighted.
- 2 Rotate the search dial.
The clickstop positions of the dial are cleared, and the tape is played back at a speed ($-1\times$ to $+1\times$) corresponding to the speed at which the dial is rotated. When the rotation of the dial is stopped, a still picture appears. The playback picture is free from noise.
- 3 To transfer operation from the jog mode to another mode, press the button which corresponds to the mode which is to be transferred to.

Shuttle mode

- 1 Push the search dial to release it from its "in" position.
The SHTL lamp now lights, and the shuttle mode is established.
• Immediately after the power is turned on, rotate the search dial and set it to its center position.
- 2 Set the SHTL/SLOW switch to the SHTL or SLOW position.
- 3 Rotate the search dial.
When the SHTL/SLOW switch is set to the SHTL position, the speed of the playback picture is varied in the 0 to $\pm 32\times$ range depending on the dial's position. (The speed can be switched to $\pm 8.4\times$, $\pm 16\times$ or $\pm 32\times$ using setup menu item No. 101 (SHTL MAX).)
The dial is set to the clickstop at the center: at this position a still picture appears on the screen.
When the SHTL/SLOW switch is set to the SLOW position, the speed of the playback picture is varied in the $-4.1\times$ to $+4.1\times$ range depending on the dial's position. (The maximum speed can be selected using setup menu item No. 320 (VAR FWD MAX) and No. 321 (VAR REV MAX). However, noise will appear at any speed outside the $-1\times$ to $+1\times$ range for the DVCPRO50 (50 Mbps) format, the $-2\times$ to $+2\times$ range for the DVCPRO (25 Mbps) format and the $-1\times$ to $+1\times$ range for the DV format.) The dial is set to the clickstop at the center: at this position a still picture appears on the screen.
The playback picture is free from noise.
- 4 To transfer operation from the shuttle mode to another mode, press the STOP button or another button.

<Note>

The unit is set at the factory in such a way that operation will be transferred to the shuttle or jog mode when the search dial is rotated. If it is inconvenient to transfer directly to the variable speed mode, operation transfer can be set up to go through the search button. Set setup menu item No. 100 (SEARCH ENA) to KEY.

MULTI CUE Function

Entering CUE points

■ Automatic entry

Using the search dial or in the PLAY mode, press the SET button at the place where the tape is to be cued. The CUE button in which the CUE point was entered now lights.

Each time the SET button is pressed at the next place where the tape is to be cued, the CUE point will be entered into the CUE button, in which a CUE point has not yet been entered, in sequence starting with the button having the lowest number.

<Note>

When CUE points are entered in all 8 buttons, no further points will be entered even when the SET button is pressed. In this case, either overwrite an existing entry using the procedure for entry into a particular CUE button or reset the CUE point entry and then enter another CUE point.

■ Entry into a particular CUE button

There are two procedures for entering a CUE point into a particular CUE button.

- When a CUE point is to be entered into a CUE button in which no CUE point has been entered, press one of the CUE buttons (CUE 1 to CUE 8) directly at the place where the tape is to be cued. The lamp of the CUE button which was pressed now lights, indicating that the CUE point has been entered for that button.
- When a CUE point is to be entered into a CUE button in which a CUE point has already been entered, press the CUE button and SET button together at the place where the tape is to be used. In this case, the previous CUE point in the CUE button will be overwritten and a new CUE point will be entered.

Checking CUE points

Press one of the CUE buttons in which a CUE point has been entered to check the CUE point. The value of the entered CUE point appears on the display and the CUE button which was pressed now flashes. To release the flashing of the CUE button, either press the flashing CUE button or press another CUE button in which a CUE point has been entered. In this case, the flashing moves to the CUE button which was pressed.

■ Cueing up the tape to the CUE point

Press the CUE UP button while the CUE button is flashing. When this button is pressed, the tape is prerolled to the CUE point, and a still picture appears on the screen.

- The preroll time can be set using setup menu item No. 016 (CU-ROLL TIME).
- The mode to be established upon completion of the prerolling can be set to the STOP or STILL by setting setup menu item No. 315 (AFTER CUE-UP).

<Note>

If the button is pressed when no CUE point has been selected, the tape will be prerolled from the point where the button was pressed, and a still picture will appear on the screen.

■ Prerolling the tape to the CUE point

Press the PREROLL button while the CUE button is flashing. When this button is pressed, the tape is prerolled to the CUE point, and a still picture appears on the screen.

- The preroll time can be set using setup menu item No. 000 (P-ROLL TIME).
- The mode to be established upon completion of the prerolling can be set to the STOP or STILL by setting setup menu item No. 315 (AFTER CUE-UP).

<Note>

If the button is pressed when no CUE point has been selected, the tape will be prerolled from the point where the button was pressed, and a still picture will appear on the screen.

MULTI CUE Function

Clearing CUE points

■ Clearing a particular CUE point

Press the RESET button while holding down the CUE button in which the point to be cleared has been entered. The entered CUE point will be reset, and the lamp of the CUE button concerned will go off at the same time.

■ Clearing all the CUE points together

Press the RESET button while holding down the SET button. All the entered CUE points will be reset and all the lamps of the CUE buttons will go off at the same time.

<Notes>

- The following applies when the CTL mode has been set.
When the RESET button is pressed while the SET button is held down, all the entered CUE points will be reset but the CTL value will not be reset.
Conversely, when the SET button is pressed while the RESET button is held down, all the entered CUE points will be reset and the CTL value will also be reset.
- The entered CUE points are not reset even when the tape is ejected. In the CTL mode, only the CTL value is reset.

Video Output Signal (Encoder Output) Adjustments

In order to ensure an accuracy which is free from errors during editing when proceeding with AB roll editing (editing using two source units) using editors, it is necessary to adjust the video output signal (ENCODER OUT) after the system connections have been performed. (These adjustments must be performed again each time a connecting cable has been replaced or the connections are changed.)
The adjustment procedure for this unit is described below.

- 1 Check the connections. (See page 20)
- 2 Set the **REMOTE/LOCAL** switch at the bottom of the front panel to the adjustment position (LOCAL).
REMOTE: The video output signals are adjusted using the external encoder remote controller.
LOCAL: The video output signals are adjusted using the controls on this unit.
- 3 Perform the adjustments separately for each source unit.
 - 3-1 **When the preset values are to be used**
 Set the PRESET/MANUAL switches for VIDEO LEVEL, CHROMA LEVEL, SETUP and HUE to the PRESET position.
 - 3-2 **When adjusting the video output signals without using the PRESET values**
 - 1 Play back a cassette tape on which standard color bars have been recorded.
 - 2 Adjust the controls in such a way that the following will appear on the waveform monitor (WFM) and vectorscope (VSC).

[A] Setup level:

Adjust in such a way as to eliminate any deviation.

[B] Video level:

Adjust to 100 IRE.

[C] Chroma level and hue:

Adjust the two controls and place the vector waveform traces within the square grid mark.

- 4 Adjust the connected source units in the same way.

Setup (Default Settings)

The unit's main settings are performed while making selections using a menu system. The setting menus will appear on a TV screen when the VIDEO OUT 3 connector on the connector panel has been connected to a TV monitor.

Changing the settings

- 1 Press the MENU button.
 The setup menu screen appears on the TV monitor, and the setup menu item number appears on the unit's counter display.
 (When setup has already been performed, the screen showing the changes made last is displayed.)
- 2 Rotate the search dial and select the item to be set.
 The cursor (*) moves on the menu screen, and the item number on the display flashes.
 • When the dial is rotated clockwise, the flashing item number is incremented (001 → 002 → 003 → 004 → and so on); when it is rotated counterclockwise, it is decremented.
 • When the FF or REW button is pressed while the PLAY button is held down, the next or previous item is selected.
 • Use the search dial in the JOG mode whenever possible.
- 3 Rotate the search dial while holding down the search button at the position where the change is to be made. The menu screen and setting on the display flash.
 When the dial is rotated clockwise, the setting is incremented; when it is rotated counterclockwise, it is decremented.
- 4 Release the search button when the settings are completed. The item number now flashes.
 • When the search dial is in the SHTL mode, the item will move unless the dial is held at the STILL position.
- 5 Repeat steps 2 to 4 if another item is to be changed.
- 6 Press the SET button. The changes made are now stored in the memory. To return the settings to what was set before the changes were made, press the MENU button.
 • To return the setup settings to the factory (default) settings, press the RESET button while the menu is displayed. The following message will appear.

SETUP-MENU INIT SET
YES<PLAY>/NO<STOP>

When the PLAY button is now pressed, the factory settings will be restored.

<Notes>

- When the RESET button is pressed to restore the factory settings, the change will be made for the user file in current use only. The other user files will not be affected.
- The changes made to the SYSTEM menu settings can be stored in the memory also by pressing the MENU button.

Setup (Setting) Menus

This unit offers five user files each of which can hold different menu settings. One of these files can be selected for use as the situation demands.

Changing the file

- 1 Press the MENU button.
- 2 When the FF button is pressed while the STANDBY button is held down, the next user file is selected in place of the current user file. Conversely, when the REW button is pressed while the STANDBY button is held down, the previous user file is selected in place of the current user file.

User files

Each user file has the following items.

- BASIC
- OPERATION
- INTERFACE
- EDIT
- TAPE PROTECT
- TIME CODE
- VIDEO
- AUDIO
- V BLANK
- MENU

- 3 When the user file to be used has been selected in step 2, press the SET button. The user file is changed and stored in the memory.

<Note>

The SYSTEM menu items are not contained in user files 1 to 5. Therefore, to set the SYSTEM menu items, select the user file and switch to the SYSTEM file.

Setup Menus

The lock mode can be set to protect the settings in the system file and user files (USER2 to USER5). Once the lock mode has been set, it is no longer possible to change the settings. The setting and release of the lock mode can be performed using setup menu item No. 30 (MENU LOCK) for the system file and using setup menu item No. A03 (MENU LOCK) for the user files.

Setting and releasing the lock mode

- 1 Press the MENU button.
- 2 Press the FF or REW button while the STANDBY button is held down to select the file for which the lock mode is to be set or released.
- 3 Rotate the search dial, and move the cursor (*) on the menu screen to No. 30 (MENU LOCK) for the system file or to No. A03 (MENU LOCK) for the user files.
- 4 Rotate the search dial while the search button is held down, and select whether to set or release lock mode.
Set lock: Set the setting to 0001 (ON).
Release lock: Set the setting to 0000 (OFF).

When the lock is set, "LOCKED" appears at the top of the menu screen. In addition, the counter display stops flashing and lights up.

SETUP-MENU	LOCKED
<USER2>	No.000 - 0005
*000 P-ROLL TIME	5s
001 LOCAL ENA	ST&EJ
002 TAPE TIMER	±12h
003 REMAIN SEL	OFF
004 SETUP NUMBER	OFF
007 SUPER	ON
008 DISPLAY SEL	T&STA
009 CHARA H-POS	5
010 CHARA V-POS	23

- 5 Press the SET button. The setting is now stored in the memory.

<Notes>

- The lock mode cannot be set for the USER1 file.
- Once a file has been set to the lock mode, it cannot be reset to the factory settings even when the RESET button is pressed.

The contents of the USER2 to USER5 files can be copied (loaded) to the USER1 file. Alternatively, the contents of the USER1 file can be copied (saved) to the USER2 to USER5 files.

Loading a user file

- 1 Press the MENU button.
- 2 Press the FF or REW button while the STANDBY button is held down and select USER1.
- 3 Rotate the search dial, and move the cursor (*) on the menu screen to No. A00 (LOAD).

```

SETUP-MENU  MENU
<USER1>    NO.A00 - 0000
804 BLANK LINE   BLANK
*A00 LOAD      USER2
A01 SAVE       USER2
A02 P.ON LOAD   OFF
END
  
```

- 4 Rotate the search dial while the search button is held down, and select the user file which is to be loaded in USER1.
- 5 Press the SET button. The following messages now appear on the menu screen and counter display.

Menu screen

```

SETUP-MENU LOAD

USER2 → USER1 OK?
YES<PLAY>/NO<STOP>
  
```

Counter display

```

TCR 00:00:00:00
SETUP LOAD U-2 → U-1
  
```

The number of the user file selected in step 4 is displayed in the shaded area.

- 6 Press the PLAY button. The settings in the user file selected in step 4 are loaded, and the USER1 menu display appears. If the STOP button is pressed instead, the USER1 menu display appears with its settings remaining unchanged.
- 7 Rotate the search dial, and move the cursor (*) on the menu screen to any item except No. A00 (LOAD) or No. A01 (SAVE).
- 8 Press the SET button. The USER1 settings are now stored in the memory. If they are not going to be stored in the memory, press the MENU button instead of the SET button.

Setup Menus

Saving a user file

- 1 Press the MENU button.
- 2 Press the FF or REW button while the STANDBY button is held down and select USER1.
- 3 Rotate the search dial, and move the cursor (*) on the menu screen to No. A01 (SAVE).

```

SETUP-MENU  MENU
<USER1>    NO.A00 - 0000
804 BLANK LINE   BLANK
A00 LOAD      USER2
*A01 SAVE     USER2
A02 P.ON LOAD   OFF
END
  
```

- 4 Rotate the search dial while the search button is held down, and select the user file in which the USER1 settings are to be saved. User files which have been set to the lock mode will not be displayed at this time. If all the user files are set to the lock mode, the "LOCKED" display appears, and the save operation cannot be performed.
- 5 Press the SET button. The following messages now appear on the menu screen and counter display.

Menu screen

```

SETUP-MENU SAVE

USER1 → USER2 OK?
YES<PLAY>/NO<STOP>
  
```

Counter display

```

TCR 00:00:00:00
SETUP SAVE U-1 → U-2
  
```

The number of the user file selected in step 4 is displayed in the shaded area.

- 6 Press the PLAY button. The USER1 settings are saved in the user file selected in step 4. If the STOP button is pressed instead, the USER1 menu display appears with its settings remaining unchanged.
- 7 Rotate the search dial, and move the cursor (*) on the menu screen to any item except No. A00 (LOAD) or No. A01 (SAVE).
- 8 Press the SET button. The USER1 settings are now stored in the memory. If they are not going to be stored in the memory, press the MENU button instead of the SET button.

Automatically calling a user file when the power is turned on

If the user file to be loaded is set in advance using setup menu item No. A02 (P.ON LOAD), the file will be loaded into USER1 automatically when the power is turned on.

<OPERATION> (continued)

Item		Setting		Description
No.	Superimposed display	No.	Superimposed display	
110	MEMORY STOP	0000 0001	OFF ON	This selects whether the VTR is to stop automatically when the counter value reaches "0" during fast forwarding or rewinding in the CTL mode. 0: The VTR does not stop. 1: The VTR stops automatically. <Notes> 1. The stop mode concerned is either the stop or still-picture (SHTL STILL) mode depending on the setup menu item No. 315 (AFTER CUE-UP) setting. 2. When the AUTO REW function and MEMORY function have been selected at the same time, the AUTO REW function takes precedence.
111	FRZ MODE SEL	0000 0001 0002	DIS STBOFF SOF&EJ	This selects the image which is to be output in the STANDBY OFF (HALF LOADING) mode and EJECT mode. 0: The video output is muted. 1: In the STANDBY OFF (HALF LOADING) mode only, the playback picture corresponding to the point in time when the STANDBY OFF mode was established is frozen and output. 2: In the STANDBY OFF (HALF LOADING) and EJECT mode, the playback picture corresponding to the point in time when the mode was established is frozen and output. <Note> The mode of field freeze is used when the playback picture is frozen.

"_" denotes the factory setting.

Description of memory stop function

- When the FF button is pressed, the VTR performs the regular fast forward operation since the zero point is not located in the direction of operation.
- When the REW button is pressed, the PREROLL lamp lights (the SHTL lamp also lights), the VTR proceeds with the preroll operation, and it automatically stops when it reaches the position where the counter reads "0."
- When the REW button is pressed, the VTR performs the regular rewind operation since the zero point is not located in the direction of operation.
- When the FF button is pressed, the PREROLL lamp lights (the SHTL lamp also lights), the VTR proceeds with the preroll operation, and it automatically stops when it reaches the position where the counter reads "0."

319	VAR STEP	0000 0001	FINE COARSE	This selects the VAR speed above $\pm 1\times$ for remote control operations. 0: The tape is played at a speed which can be varied in fine steps. 1: The tape is played at a speed which can be varied in coarse steps. <Note> Phase synchronization from the editing controller is not possible at the "1" (COARSE) setting.
320	VAR FWD MAX	0000 0001 0002	+4.1 +1.85 +1	This sets the maximum VAR FWD speed. 0: DVCPR050 (50 Mbps) = $+4.1\times$ normal speed DVCPR0 (25 Mbps) = $+4.1\times$ normal speed DV = $+3.1\times$ normal speed 1: DVCPR050 (50 Mbps) = $+1.85\times$ normal speed DVCPR0 (25 Mbps) = $+2\times$ normal speed DV = $+1.85\times$ normal speed 2: $+1\times$ normal speed <Note> Phase synchronization from the editing controller is not possible at a setting other than "0" (+4.1).
321	VAR REV MAX	0000 0001 0002	-4.1 -1.85 -1	This sets the maximum VAR REV speed. 0: DVCPR050 (50 Mbps) = $-4.1\times$ normal speed DVCPR0 (25 Mbps) = $-4.1\times$ normal speed DV = $-3.1\times$ normal speed 1: DVCPR050 (50 Mbps) = $-1.85\times$ normal speed DVCPR0 (25 Mbps) = $-2\times$ normal speed DV = $-1.85\times$ normal speed 2: $-1\times$ normal speed <Note> Phase synchronization from the editing controller is not possible at a setting other than "0" (-4.1).
322	JOG STEP	0000 0001	FINE COARSE	This selects the JOG speed during remote control operations. 0: The tape is played at a speed which can be varied in fine steps. 1: The tape is played at a speed which can be varied in coarse steps. <Note> Phase synchronization from the editing controller, which synchronizes the phase using the JOG command, is not possible at the "1" (COARSE) setting.
323	JOG FWD MAX	0000 0001 0002	+4.1 +1.85 +1	This sets the maximum JOG FWD speed. 0: DVCPR050 (50 Mbps) = $+4.1\times$ normal speed DVCPR0 (25 Mbps) = $+4.1\times$ normal speed DV = $+3.1\times$ normal speed 1: DVCPR050 (50 Mbps) = $+1.85\times$ normal speed DVCPR0 (25 Mbps) = $+2\times$ normal speed DV = $+1.85\times$ normal speed 2: $+1\times$ normal speed <Notes> • When the dial is operated on the front panel, the maximum playback speed is $+1\times$ normal speed for the DVCPR050 (50 Mbps) and DV formats. With the DVCPR0 (25 Mbps) format, it is $+2\times$ normal speed at "0" or "1" and $+1\times$ normal speed at "2" depending on the menu setting. • Phase synchronization from the editing controller, which synchronizes the phase using the JOG command, is not possible at a setting other than "0" (+4.1).

"_" denotes the factory setting.

324	JOG REV MAX	0000 0001 0002	-4.1 -1.85 -1	This sets the maximum JOG REV speed. 0: DVCPR050 (50 Mbps) = $-4.1\times$ normal speed DVCPR0 (25 Mbps) = $-4.1\times$ normal speed DV = $-3.1\times$ normal speed 1: DVCPR050 (50 Mbps) = $-1.85\times$ normal speed DVCPR0 (25 Mbps) = $-2\times$ normal speed DV = $-1.85\times$ normal speed 2: $-1\times$ normal speed <Notes> • When the dial is operated on the front panel, the maximum speed is $-1\times$ normal speed for the DVCPR050 (50 Mbps) and DV formats. With the DVCPR0 (25 Mbps) format, it is $-2\times$ normal speed at "0" or "1" and $-1\times$ normal speed at "2" depending on the menu setting. • Phase synchronization from the editing controller which synchronizes the phase using the JOG command is not possible when a setting other than 0 (-4.1) is used.

<TAPE PROTECT>

Item		Setting		Description
No.	Superimposed display	No.	Superimposed display	
400	STILL TIMER	0000 0001 0002 0003 0004 0005 0006 0007 0008	0.5s 5s 10s 20s 30s 40s 50s 1min 2min	This selects the time taken until the tape protection mode is established when the unit has been left standing in the stop or search still (JOG/VAR/SHTL) mode. (Unit: s = second, min = minute) <Note> When a DV tape for general consumer applications is used, any setting above 10 seconds will be treated as 10 seconds. However, the selection screen will show operations up to 2 minutes.
401	SRC PROTECT	0000 0001	STEP HALF	When the time selected as the setup menu item No. 400 (STILL TIMER) setting elapses while the unit is in the search STILL (JOG/VAR/SHTL) mode, the unit automatically enters a tape protection mode. This menu item is for selecting which tape protection mode is to be entered by the unit. 0: STEP FWD 1: HALF LOADING <Note> When STEP FWD has been selected, the STANDBY OFF (HALF LOADING) mode will automatically be established when the total time during which the unit has been left standing in the still status has reached 30 minutes (or 1 minute for a DV tape).
402	DRUM STDBY	0000 0001	OFF ON	This selects whether the head drum is to be rotated when operation is transferred to the STANDBY OFF (HALF LOADING) mode. 0: The head drum is stopped. 1: The head drum is rotated.
403	STOP PROTECT	0000 0001	STEP HALF	When the time selected as the setup menu item No. 400 (STILL TIMER) setting elapses while the unit is in the STOP mode, the unit automatically enters a tape protection mode. This menu item is for selecting which tape protection mode is to be entered by the unit. 0: STEP FWD 1: HALF LOADING <Note> When STEP FWD has been selected, the STANDBY OFF (HALF LOADING) mode will automatically be established when the total time during which the unit has been left standing in the stop status has reached 30 minutes (or 1 minute for a DV tape).

<Precaution for STILL TIMER setting>
The cumulative standby time at the same position increases when programs are transmitted or at other times when the same material is used repeatedly, etc.

"_" denotes the factory setting. - 44 -

		0001	ON	
509	DF MODE	0000	DF	This selects the DF or NDF mode for CTL. 0: Drop frame mode 1: Non-drop frame mode <Notes> • This Item is valid when the unit is in the LOCAL mode or when "ENA" is selected as the menu setup item No. 004 (LOCAL ENA). • This setup menu item is not displayed in the 625 mode.
		0001	NDF	
511	VITC OUT	0000 0001	SBC VAUX	This selects the method of outputting VITC which is superimposed onto the video output signals. SBC: The time code recorded in the SBC area is output as the VITC. VAUX: The time code recorded in the VAUX area is output as the VITC.

"—" denotes the factory setting.

SBC (Sub Code Data) area

This area is separate from the video and audio data area on the helical track. It is used to store the time codes complying with the SMPTE/EBU standard. As with the conventional linear time code (LTC), the time code can be read even during rewinding or fast forwarding. It can also be read when the tape has stopped.

VAUX (Video Auxiliary Data) area

This area is located in the video data area on the helical track. It is used to store the auxiliary data relating to the video data.

<Notes>

Control over the time code and user bit during tape play is exercised using the data recorded in the SBC area. In other words, data recorded in the SBC area is used as the source of the data which is displayed or superimposed or the data which is sent to the editing controller.

If the MENU is pressed instead, the settings will not be changed.
A01	SAVE	.0000 0001 0002 0003 0004	USER2 USER3 USER4 USER5 LOCKED	This selects the user file in which the USER1 settings are to be saved. 0: The USER1 settings are to be saved in the USER2 file. 1: The USER1 settings are to be saved in the USER3 file. 2: The USER1 settings are to be saved in the USER4 file. 3: The USER1 settings are to be saved in the USER5 file. 4: The "LOCKED" display appears when the change prohibit status has been established for all the files. <Notes> • A user file for which change prohibit is set cannot be selected. • When the change prohibit status has been established for all the files, the "LOCKED" display appears, and the saving operation cannot be performed.
A02	P.ON LOAD	.0000 0001 0002 0003 0004	OFF USER2 USER3 USER4 USER5	This selects the user file whose settings are to be loaded into USER1 when the power is turned on so that the unit will start up with these settings. 0: The unit is started up with the settings in the user file which was previously set. 1: The settings of USER2 are loaded in USER1 and the unit starts with these settings. 2: The settings of USER3 are loaded in USER1 and the unit starts with these settings. 3: The settings of USER4 are loaded in USER1 and the unit starts with these settings. 4: The settings of USER5 are loaded in USER1 and the unit starts with these settings.
A03	MENU LOCK	.0000 0001	OFF ON	This selects whether the lock mode is to be set or released for the user files (USER2 to USER5). 0: The lock is released (changes to the files can be made). 1: The lock is set (no changes to the files can be made). <Note> The lock cannot be set for USER1.

"_" denotes the factory setting.

<Notes>

- Menu items No. A00 (LOAD), No. A01 (SAVE) and No. A02 (P.ON LOAD) can be set for the USER1 file only. They will not appear for the USER2 to USER5 files.
- Menu item No. A03 (MENU LOCK) can be set for the USER2 to USER5 files only. It will not appear for the USER1 files.

Time Code/User Bit

Time code

The time codes are used when their values are to be read by the time code reader (time code signal reader) and the absolute position of the tape is to be displayed in increments of hours, minutes, seconds and frames.

The time codes are written in the sub-code area (data area) of the helical track. They enable the VTR's playback speed to be read from the stop mode to slow-motion playback up to high-speed speed play (approx. 50x normal speed or approx. 100x when a DVCPRO tape is used).

The time code values are shown on the display or superimposed.

User bit

The "user bit" refers to the 32-bit (8-digit) data frame among the time code signals which has been released to users.

Time Code/User Bit Playback

- 1 Set the unit to the stop mode.
- 2 Set the TC/CTL button to TC.
- 3 Set the TC/UB switch to TC or UB.
TC: The time code is displayed.
UB: The user bit is displayed.
 • When it is no longer possible to read the time code, it is interpolated using the CTL signal.
- 4 Press the PLAY button.
 Playback now commences, and the time code appears on the display.
 When "ON" has been selected as the setup menu item No. 007 (SUPER), the time code value is superimposed onto the video signal from the VIDEO OUT 3 connector.

<Notes>

- The colon between the seconds and frames changes to a period when the drop frame time code is read.
- When the time code signal is missing, it is automatically compensated for using the CTL signal. In this case, the following display appears.

T * R 00:01:04:07

The colon between the seconds and frames changes to a period in the drop frame mode.

When the time code signal is missing, an asterisk (*) appears here.

Superimpose Screen

The control signals, time code, etc. are displayed using abbreviations.

TV monitor

CTL = control signal
 TCR = TC time code reading
 UBR = TC user bit reading

Characters displayed

The background of the characters superimposed on the display can be changed using setup menu item No. 011 (CHARA TYPE).

TV monitor

Display position

The position of the characters superimposed on the display can be changed using setup menu items No. 009 (CHARA H-POS) and No. 010 (CHARA V-POS).

TV monitor

TV monitor

Operation mode

The VTR's operation mode can also be displayed using setup menu item No. 008 (DISPLAY SEL).

TV monitor

VTR's operation mode

Servo Reference

This unit automatically selects the reference video signal which is supplied from the REF VIDEO input connector or the internal sync signal (INT) as the servo reference signal. When the signal is selected, the unit's mode and servo reference setting stand in the relationship shown in the flowchart presented below.

Audio V Fade Function

When a tape is edited, the information on the edit point splicing method selected is recorded on the tape. This information is therefore sensed when the tape is inserted and played back, and V fade or cut processing is automatically performed for these sections [but only when "AUTO" has been set as the playback fade selection (setup menu item No. 727)].

When "CUT" is set as the edit point splicing method

When "FADE" is set as the edit point splicing method

<Notes>

- When "CUT" is set as the edit point splicing method (setup menu item No. 727), cut processing is performed for all the splices.
- When "FADE" is set as the edit point splicing method (setup menu item No. 727), V fade processing is performed for all the splices.

Selecting the Audio Monitor Output

Monitor output channels

The monitor output channels can be selected using the MONITOR SELECT switches as shown below.

Monitor output	Output signals
L	CH1/CH2/CH3/CH4/CH1+CH2/CH3+CH4/CUE
R	CH1/CH2/CH3/CH4/CH1+CH2/CH3+CH4/CUE

MONITOR SELECT switches

Rack Mounting

The unit can be mounted into a 19-inch standard rack if the AJ-MA75P rack-mounting adapters (optional accessory) are used. For the installation rails, it is recommended that the rail and bracket for 18" length (model number CC3061-99-0400) of CHASSIS TRAK be used. (The complete slide rail and bracket unit is not available from Panasonic.) For further details, consult with your dealer.

- 1 Remove the screws on the left and right sides of the unit.
- 2 Use the screws which have just been removed to attach the inner members of the slide rails.

The length of the screws used is subject to restriction. If some of the mounting screws have been lost or misplaced, use screws which are less than 2/5" long in their place. Four screws must be used to secure each inner member.

- 3 Attach the outer member brackets to the rack.
Check that the height is the same for the left and right brackets.
- 4 Attach the AJ-MA75P rack-mounting adapters with the four screws supplied.

- 5 Remove the four rubber feet from the bottom of the unit, and install the unit in the rack. After the unit has been installed, check that it moves smoothly along the rails.

<Notes>

- Keep the temperature inside the rack to between 41°F and 104°F (5°C and 40°C).
- Bolt the rack securely to the floor so that it will not topple over when the VTR is drawn out.

Video Head Cleaning

This unit has an auto head cleaning function which automatically reduces the dirt on the heads. However, to further increase the unit's reliability, it is recommended that its video heads be cleaned every day.

Use the cleaning fluid designated by Panasonic.

Condensation

Condensation forms due to the same principle involved when droplets of water form on a window pane of a heated room. This phenomenon occurs when the unit or tape is moved between places where the temperature or humidity varies greatly or when, for instance:

- It is moved to a very humid place full of steam or a room immediately after it has been heated up.
- It is suddenly moved from an air-conditioned location to a hot or humid location.

When moving the unit or tape to locations such as these, leave it standing for about 10 minutes instead of switching on the power immediately.

If condensation has formed on or in the unit, the AUTO OFF lamp lights, and the cassette tape is automatically ejected.

Keep the power supplied and wait until the AUTO OFF lamp goes off.

■ Maintenance

Before proceeding with maintenance, be absolutely sure to set the power switch to OFF and take hold of the power plug and unplug it from the power outlet.

Use a soft cloth to clean the cabinet. In the case of stubborn dirt, dilute some kitchen detergent, soak a cloth in the solution, wring it out well, and wipe the surfaces clean. Then wipe up the remaining moisture using a dry cloth.

Error Messages

When a warning occurs in this unit, the warning lamp lights up.

Open the DIAG menu. A description of the warning will now appear on the counter display and TV monitor. In addition, if trouble has occurred in the operation of the unit, the AUTO OFF lamp lights, and a message appears on the counter display.

DIAG menu

This displays the VTR information.

The VTR information includes the warning information, the deck's serial number, and hour meter (usage time) information. The DIAG menu appears on the TV monitor when the TV monitor has been connected to the VIDEO OUT 3 connector on the connector panel.

Displaying the DIAG menu

- 1** Press the DIAG button.
The DIAG menu screen appears on the TV monitor, and a message appears on the counter display.
- 2** Each time the search button is pressed, the display is switched to the warning information, the deck's serial number and hour meter information in this order.
- 3** Press the DIAG button to return to the original display.

Warning Information display

- A warning message appears whenever a warning occurs (the warning lamp lights). When a warning has not occurred, "NO WARNING" is displayed.
- When more than one warning has occurred, a description of each warning can be checked by turning the search dial.

Displaying the hour meter information

Turn the search dial to move the cursor (*), and a description of the item where the cursor is located will appear on the counter display.

Item No.	Item	Description
Ser	*****	This displays the deck's serial number.
H00	OPERATION	This displays the number of hours during which the power has been supplied in 1-hour units.
H01	DRUM RUN	This displays the number of hours during which the drum has been rotating in 1-hour units.
H02	TAPE RUN	This displays the number of hours during which the tape has traveled in the FF, REW, PLAY and SEARCH (JOG, VAR, SHTL) modes in 1-hour units.
H03	THREADING	This displays the number of times the tape has been threaded and unthreaded in 1-time units.
H11	DRUM RUN r	This displays the number of hours during which the drum has been rotating in 1-hour units. (The display can be reset.)
H12	TAPE RUN r	This displays the number of hours during which the tape has traveled in the FF, REW, PLAY and SEARCH (JOG, VAR, SHTL) modes in 1-hour units. (The display can be reset.)
H13	THREADING r	This displays the number of times the tape has been threaded and unthreaded in 1-time units. (The display can be reset.)
H30	POWER ON	This displays the number of times the power has been turned on in 1-time units.

<Notes>

- The hour meter information items which can be reset are reset by the dealer when maintenance work, etc. has been performed.
- Operations involving the search button and search dial cannot be performed while the DIAG menu is displayed.

If "T&S&M" has been selected as the setup menu item No. 008 (DISPLAY SEL) setting, the message will appear on the mode display area when a warning or error has occurred. When two or more warnings or errors have occurred, they are displayed in sequence of priority starting with the one which has the highest priority.

Priority	Display	Description
High ↑	Error messages (see error message table)	When trouble has occurred in the operation of the unit, the AUTO OFF lamp lights, and an error message is displayed.
	ILLEGAL REF	When illegal signals, which are not black burst or other composite signals complying with the broadcast standards (525: RS-170A, 625: CCIR624), have been supplied to the REF VIDEO input connector, the message shown on the left may appear depending on the signal concerned. Since, in a case like this, it cannot be guaranteed that the VTR will operate properly, eject the cassette and turn off the power. Check the REF VIDEO signals before turning the power back on. <Note> The tape will not be damaged even when this message appears.
Low ↓	Warning messages (see error message table)	When a warning occurs, the warning lamp lights, and a warning message is displayed. When two or more warnings have occurred, they are displayed in sequence of priority starting with the one which has the highest priority.

Warning messages

Priority	On counter display and TV monitor	Description	VTR operation
High ↑	FAN STOP	This appears when the fan motor has stopped.	The VTR continues operating.
	NO RF	This appears when a blank portion of the tape lasting more than 1 second has been detected during playback. Any portion of the tape is recognized as a blank when all the following conditions are satisfied: • When no signals are output from any of the heads. • When no playback data can be read. • When there is no CTL signal (this does not apply with DV tapes for general consumer applications).	The VTR continues operating.
	SERVO NOT LOCKED	This appears when the servo is not locked for 3 or more seconds during playback.	The VTR continues operating.
	LOW RF	This appears when it has been detected that the envelope level has dropped to approximately one-third of its usual level during playback.	The VTR continues operating.
Low ↓	HIGH ERROR RATE	This appears when the error rate increases, and correction or interpolation is performed for either the video or audio playback signals.	The VTR continues operating.

Error Messages (when AUTO OFF lamp lights)

On counter display	On TV monitor	Description	VTR operation (restart action)
CAP ROTATE TOO SLOW	CAP ROTA TOO SLOW	When the capstan motor speed is abnormally low, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF→ON)
CAP TENSION ERROR	CAP TENSION ERROR	When abnormal tension is detected at the supply side in the capstan mode, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF→ON)
DEW	DEW	When condensation is detected, the AUTO OFF lamp lights, the message display flashes, and the VTR is transferred to the eject mode. After the tape is ejected, the drum rotates in order to dry out the condensation. When the condensation has dried out, the AUTO OFF lamp goes off, the message display is cleared, and the VTR can be operated again. • When condensation is detected in the eject mode, the drum starts rotating as soon as it is detected. • When condensation is detected when the cassette has been inserted, the drum rotation is stopped, and after the tape is ejected, the drum starts rotating.	Eject
DRUM ROTATE TOO FAST	DRUM ROTA TOO FAST	When the cylinder motor speed is abnormally high, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF→ON)
DRUM ROTATE TOO SLOW	DRUM ROTA TOO SLOW	When the cylinder motor speed is abnormally low, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF→ON)
E-FF	E-FF	When the tape start and tape end are detected simultaneously either during or after loading, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF→ON)
FRONT LOAD ERROR	FRONT LOAD ERROR	When the take-up reel has been rotating without taking up the tape for a specific period of time while the start or end processing operation during loading (half position) is being performed, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF→ON)
FRONT LOAD MOTOR	FRONT LOAD MOTOR	When the cassette fails to move up even when 6 seconds have elapsed after the eject mode was established, the AUTO OFF lamp lights, and the message display flashes. <Note> When the cassette fails to move down even when 6 seconds have elapsed after the cassette was inserted, the eject mode is established.	Stop (power OFF→ON)
LOADING MOTOR	LOADING MOTOR	When the unloading operation fails to be completed within 6 seconds, the AUTO OFF lamp lights, and the message display flashes. <Note> When the loading operations fails to be completed within 6 seconds, the eject mode (unloading mode) is established.	Stop (power OFF→ON)
REEL DIR UNMATCH	REEL DIR UNMATCH	When the take-up reel motor is running in the reverse direction, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF→ON)

On counter display	On TV monitor	Description	VTR operation (restart action)
REEL TENSION ERROR	REEL TENSION ERROR	When abnormal tension at the supply side is detected in the reel mode, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF→ON)
SERVO COMM ERROR	SERVO COMM ERROR	When the servo microcomputer does not follow the instructions of the system control microcomputer even after 10 seconds have elapsed, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF→ON)
SERVO CONTROL ERROR	SERVO CONTROL ERR	When there is no response from the servo microcomputer for 1 or more seconds, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF→ON)
SERVO ERROR	SERVO ERROR	When only the servo microcomputer was reset in an instantaneous power failure, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF→ON)
S-FF/REW TIMEOVER	S-FF/REW TIMEOVER	When the start or end processing operation fails to be completed, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF→ON)
S REEL ROTA TOO FAST	S REEL TOO FAST	When the supply reel motor rotates at an abnormally fast rate, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF→ON)
S REEL TORQUE ERROR	S REEL TORQUE ERR	When an abnormal torque applied to the supply reel motor is detected or an abnormal current flowing to the current-sensing resistor is detected, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF→ON)
T REEL ROTA TOO FAST	T REEL TOO FAST	When the take-up reel motor rotates at an abnormally fast rate, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF→ON)
T REEL TORQUE ERROR	T REEL TORQUE ERR	When an abnormal torque applied to the take-up reel motor is detected, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF→ON)
UNLOAD ERROR	UNLOAD ERROR	When the tape has not been wound up during unloading, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF→ON)
WINDUP ERROR	WINDUP ERROR	If, after the total tape amount has been detected, the amount of tape wound up on the take-up reel and the amount of tape supplied by the supply reel differ to an abnormal extent while the tape is traveling, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF→ON)
WINDUP REEL NOT ROTA	W-UP REEL NOT ROTA	If, after the cassette has been inserted, the tape take-up reel has not wound up the tape while the total tape amount is not detected and while the tape is traveling, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF→ON)

RS-232C Interface

1. Introduction

(1) The VTR can be operated by commands when the RS-232 interface is used.
(See command tables on pages 67 to 69.)

(2) Conditions for acknowledging commands from the RS-232C interface
The front panel REMOTE/LOCAL switch must be set to REMOTE.
The setup menu item No. 204 (RS232C SEL) must be set to ON.

If the above conditions are not met, [ACK] + [STX] ER001 [ETX] is returned to the external unit.

Whether the [ACK] code is returned depends on the setting which has been selected for setup menu item No. 209 (RETURN ACK).

2. Hardware specifications

External interface specifications

(1) Connector specifications

Connector: D-SUB 25-pin (crossover cable supported)

Pin No.	Signal	Circuit name	Description
1	FG	Protective ground	Frame ground
2	RXD	Received data	Data is sent to PC.
3	TXD	Transmitted data	Data is received from PC.
4	CTS	Clear to send	Shorted with pin 5.
5	RTS	Request to send	Shorted with pin 4.
6	DTR	Data terminal ready	Not processed
7	SG	Signal ground	Signal ground
20	DSR	Data set ready	+ voltage output after communication enable status

(2) Example of connections with controller (PC)

(Using crossover cable with D-SUB 25-pin connectors)

PC side
(D-SUB 25-pin connector)

(Using crossover cable with D-SUB 9-pin and 25-pin connectors)

PC side
(D-SUB 9-pin connector)

3. Software specifications

Protocol

1) Communication parameters

Communication system	Asynchronous, full duplex
Baud rate	300, 600, 1200, 2400, 4800, <u>9600</u> bps
Data length	7 bits or <u>8 bits</u>
Stop bit	<u>1 bit</u> or 2 bits
Parity bit	<u>None</u> , odd or even
ACK code	ACK code returned or <u>not returned</u> <Note> The ACK code is what is returned from the VTR to the controller when data has been sent successfully from the controller.

"_" denotes the factory setting.

Changes to the settings can be made using the setup menu items listed below.

Communication parameter	Setup menu item
Communication system	No. 205 BAUD RATE
Data length	No. 206 DATA LENGTH
Stop bit	No. 207 STOP BIT
Parity bit	No. 208 PARITY
ACK code	No. 209 RETURN ACK

2) Send format [controller (PC) → VTR]

■ Data format

[STX] [command] [:] [data] [ETX]

02h XX XX XX 3Ah XX-XX 03h

← (ASCII code: symbols, numbers, upper-case letters)

20h<XX<7Fh

- [command]: Command identifier; a 3-byte identifier (ASCII code: symbols, numbers, upper-case letters) is sent as the command.
- [:]: The colon serves as a delimiter between the command and data.
- [data]: Data (ASCII code: symbols, numbers, upper-case letters) can be added in the number of bytes required.

■ Outline of procedure for sending data from controller

1. The send command starts with STX (start of text = 02h). The command is then identified by COMMAND which follows, and the data is added as required.
The format ends with ETX (end of text = 03h).
2. When a different command is to be sent, a response is awaited from the VTR, and then the command is sent. (See page 66.)
3. If STX is sent again before ETX is sent, the receive data buffer inside the VTR is cleared. A command error is returned to the controller, and the data is newly processed with STX, which was received again, at the head.

RS-232C Interface

(3) Return format [VTR → controller (PC)]

The following responses are made to the command. If necessary, more than one response may be made.

■ When the communication has terminated normally

1. The receive completion message is returned.

[ACK]
06h

2. The execution completion message is returned.

[STX] [command] [data] [ETX]
02h XX XX XX XX-XX 03h

• [command]: This is the message (data) which is returned or the execution completion message identifier.

• [data]: This is the data to be returned. It can be omitted.

[example]: Send command Return message (data)
 [STX] OPL [ETX] → [ACK] [STX] OPL [ETX]

■ When the communication has terminated abnormally

[NACK]
15h

■ When processing is not possible due to incorrect data or trouble in the VTR

1. The receive completion message is returned.

[ACK]
06h

2. An error code is returned.

[STX] E R N₁ N₂ N₃ [ETX]
02h Error code 03h

4. Error code table

- ER001: Invalid command
- Unsupported command received
 - Error in command execution
- ER002: Parameter error
- ER102: VTR mode error (front loading motor)
- ER103: VTR mode error (loading motor)
- ER104: VTR mode error (drum, capstan system)
- ER105: VTR mode error (reel system)
- ER106: VTR mode error (tension system)
- ER108: VTR dew (condensation) error
- ER1FF: VTR system error

5. Command table

(1) Commands relating to operation control

<Notes>

- Under the "return (completion) message," only the execution messages which are returned after [ACK] is returned when data is received are listed.
- In the case of commands not listed in the table, ER001 (invalid command) is returned after [ACK] has been returned.

VTR operation	Send command	Return (completion) message	Supplementary notes
STOP	[STX] OSP [ETX]	[STX] OSP [ETX]	This command is for stopping the tape travel.
EJECT	[STX] OEJ [ETX]	[STX] OEJ [ETX]	This command is for ejecting the cassette tape. The output picture status differs according to the setup menu item No. 111 (FRZ MODE SEL) setting. For details, refer to the setup menu item.
PLAY	[STX] OPL [ETX]	[STX] OPL [ETX]	This command is for starting playback.
REWIND	[STX] ORW [ETX]	[STX] ORW [ETX]	This command is for rewinding the tape. The maximum tape speed differs according to the setup menu item No. 102 (FF. REW MAX) setting. For details, refer to the setup menu item.
FAST FORWARD	[STX] OFF [ETX]	[STX] OFF [ETX]	This command is for fast forwarding the tape. The maximum tape speed differs according to the setup menu item No. 102 (FF. REW MAX) setting. For details, refer to the setup menu item.
SHTL FORWARD	[STX] OSF:data [ETX]	[STX] OSF [ETX]	This is the forward direction shuttle command. data = n: speed data 0: STILL (STILL) 1: x0.03 (x0.03) 2: x0.1 (x0.1) 3: x0.2 (x0.2) 4: x0.5 (x0.5) 5: x1 (x1) 6: x1.85 (x18.5) 7: x4.1 (x3.1) 8: x9.5*1 (x9.5*1) 9: x16*1 (x16*1) A: x32*1 (x32*1) *1: [This speed differs according to the setup menu item No. 101 (SHTL MAX) setting.] The speeds for the DV format are given in parentheses.

RS-232C interface

VTR operation	Send command	Return (completion) message	Supplementary notes
SHTL REVERSE	[STX] OSR:data [ETX]	[STX] OSR [ETX]	This is the reverse direction shuttle command. data = n: speed data 0: STILL (STILL) 1: x0.03 (x0.03) 2: x0.1 (x0.1) 3: x0.2 (x0.2) 4: x0.5 (x0.5) 5: x1 (x1) 6: x1.85 (x18.5) 7: x4.1 (x3.1) 8: x9.5*1 (x9.5*1) 9: x16*1 (x16*1) A: x32*1 (x32*1) *1: [This speed differs according to the setup menu item No. 101 (SHTL MAX) setting.] The speeds for the DV format are given in parentheses.
STANDBY OFF	[STX] OBF [ETX]	[STX] OBF [ETX]	This command is for setting the VTR to STANDBY OFF.
STANDBY ON	[STX] OBN [ETX]	[STX] OBN [ETX]	This command is for setting the VTR to STANDBY ON.

(2) Commands related to inquiries

<Notes>

- Under the "return (completion) message," only the execution messages which are returned after [ACK] is returned when data is received are listed.
- In the case of commands not listed in the table, ER001 (invalid command) is returned after [ACK] has been returned.

VTR operation	Send command	Return (completion) message	Supplementary notes
CTL/TC DATA REQUEST	[STX] QCD [ETX]	[STX] CD data [ETX] data = f w gh mm ss ff f = F w = S gh = CTL: g = SP (20h): for a plus display - (2Dh): for a minus display h = 0-9: hours TC: gh = 00-23: hours mm = 00-59: minutes ss = 00-59: seconds ff = 00-29: frames (525 mode) = 00-24: frames (625 mode)	This command is for inquiring about the counter value. CTL or TC is returned, whichever corresponds to the front display mode.
STATUS REQUEST	[STX] QOP [ETX]	[STX] xxx [ETX] xxx = OEJ: EJECT OFF: FAST FORWARD OPL: PLAY ORW: REWIND OSP: STOP (including STANDBY ON) SRS: PREROLL OBF: STANDBY OFF OSF: SHTL FORWARD OSR: SHTL REVERSE OJG: JOG FORWARD/REVERSE OSW: VAR FORWARD/REVERSE	This command is for inquiring about the VTR's operation mode.
ID (VTR No.) REQUEST	[STX] QID [ETX]	[STX] data [ETX] data = AJ-D940	This command is for inquiring about the VTR used.

Options

- AJ-CS750P cassette adapter
- AJ-MA75P rack-mounting adapters

Introduction and Features

The AJ-D940 is a multi-purpose studio digital VTR which uses 1/4-inch wide compact cassette tapes and which is designed exclusively for slow-motion playback with a high picture quality at a 50 Mbps video recording rate. It is capable of playing back existing DVCPRO (25 Mbps) cassette tapes as well. It is equipped with a 525/625 switchable function to enable it to be operated as a studio VTR anywhere in the world.

This VTR with its high picture quality, which is due to the incorporation of digital compression technology, significantly reduces the deterioration in the quality of both sound and pictures which accompanies dubbing operations. Its compact 4U size and light-weight design makes it easy for the unit to be carried around and installed in a 19-inch rack.

A dialogue system enables the unit's setup settings to be performed while monitoring the on-screen menus that appear on the TV monitor.

Features

Compact size and light weight

This digital VTR has a 4U size. This means that it is easy to install it in a 19-inch rack, too, if the rack-mounting adapters (optional accessory, AJ-MA75P) are used.

Up to 92 minutes of playback time

Two sizes of cassette tape, the M size (for up to 33 minutes of playback time) and L size (for up to 92 minutes of playback time), can be used with this unit.

The tape has a 1/4-inch width for a compact design.

High picture quality

A high picture quality is achieved using 4:2:2 component signals whose recording rate is twice as high as that of the existing DVCPRO format.

625i/525i switchable function

By setting the 625i/525i selector switch to the setting that corresponds to the TV system of the signals (625i or 525i) recorded on the tape, the signals of either TV system can be played back.

Compatibility with DVCPRO format

Tapes recorded using the existing DVCPRO format can be played back on this unit.

Compatibility with general consumer video equipment

Cassette tapes designed for general consumer applications containing material shot by a consumer digital camera can be played back on this unit if the cassette adapter (optional accessory, AJ-CS750P) is used.

<Note>

Tapes recorded in the LP consumer mode cannot be played back.

Digital slow motion/dial jog functions

Using Panasonic's very own digital slow-motion technology, pictures played back in slow motion at the following speeds can be reproduced clearly.

DVCPRO50 (50 Mbps): -1x to +1x speed

DVCPRO (25 Mbps): -2x to +2x speed

DV: ±0.03x, ±0.07x, ±0.1x, ±0.2x, ±0.4x to ±1x

Dial shuttle function

Shuttle operations enable colour pictures to be played back in the forward or reverse direction at a maximum of 32 times the normal tape speed.

Time code

The unit contains a time code reader (TCR).

Introduction and Features

Features

(continued)

Multi-functional interface capability

• Serial digital output

The unit is equipped with a component serial interface connector to enable interfacing with serial digital component signals. (EBU Tech. 3267-E)

• Analogue video output

Both component (Y, Pb, Pr) and composite output connectors are provided.

• AES/EBU audio output

The unit comes with digital audio output connectors.

• SDTI output (option)

• 9-pin RS-422A/RS-232C remote

In addition to the standard 9-pin serial remote (RS-422A) connector, both RS-232C and 25-pin parallel remote connectors are provided.

4-channel digital audio for high sound quality

A 4-channel PCM audio capability plus another channel for the analogue cue track is featured.

Menu-operated setup

The settings for the setup prior to operating the unit are performed while viewing the setup menus which appear on the unit's display or the TV monitor.

Parts and Their Functions

Front panel

Parts and Their Functions

<Front panel top area>

❶ **POWER switch**

❷ **TV system and format display**

The selected TV system and format are displayed here.

<625/525>

625: This lights when the 625 TV system is selected.

525: This lights when the 525 TV system is selected.

<25 Mbps/50 Mbps>

25 Mbps: This indicates the DVCPRO (25 Mbps) and DV playback mode.

In the case of the DVCPRO (25 Mbps) playback mode, the DVCPRO (25 Mbps) cassette playback display lamp ❸ in the centre of the front panel also lights.

50 Mbps: This indicates the DVCPRO50 (50 Mbps) playback mode.

❸ **Cassette insertion slot**

❹ **EJECT button**

When this button is pressed, the tape inside is unloaded and several seconds later it is automatically ejected.

If the counter display area is set to the CTL display, the display will be reset.

❺ **Channel condition lamps**

One of these lamps lights in accordance with the error rate statuses. (Green → Amber → Red)

Green: This lamp lights when the error rates for both the video and audio playback signals are at an acceptable level.

Amber: This lamp lights when the error rate for either the video and audio playback signals has deteriorated. A normal playback picture will appear even when this lamp is lit.

Red: This lamp lights when either the video or audio playback signals are subject to correction or interpolation.

❻ **AUTO OFF lamp**

This lights when trouble has occurred in the unit's operation.

Parts and Their Functions

<Front panel centre>

❶ **PLAY button**

This button is pressed to commence playback.

❷ **STOP button**

This button is pressed to stop the tape travel.

The tape drum continues to rotate even in the stop mode, and the tape remains in close contact with the drum.

When the stop mode continues beyond the prescribed period of time, the unit is automatically set to the standby OFF mode in order to protect the tape.

The stop mode is established immediately after a cassette has been inserted into the unit.

❸ **FF button (see *1)**

This button is pressed to fast forward the tape.

❹ **REW button (see *1)**

This button is pressed to rewind the tape.

❺ **SERVO lamp**

This lamp lights when the drum servo and capstan servo lock.

❻ **STANDBY button**

While the same level of tape tension is applied as in the regular stop mode and the head drum continues to rotate, the lamp in the button lights to indicate that the standby ON mode is established.

The tape is set to the half-loading mode when the standby OFF mode is established. When this button is pressed in the stop mode, the standby OFF mode is established and the tape is set to the half-loading mode. At this time, the lamp in the button will go off.

When the stop mode continues beyond the prescribed period of time, the unit is automatically set to the standby OFF mode in order to protect the tape.

When either this button or the STOP button is pressed in the standby OFF mode, the standby ON mode is established. When a function button other than the STOP button is pressed, the tape will be set to the mode corresponding to the pressed button.

The time taken for operation to transfer to the standby OFF mode can be set on-screen.

❼ **TC/CTL switch**

When this switch is pressed, what appears on the counter display changes from TC to CTL or vice versa. When TC is selected, either the TC or UB value will be displayed depending on the position to which the TC/UB switch has been set.

❽ **TC/UB switch**

This selector switch is used to indicate either the TC value or UB value on the counter display area when the TC/CTL switch has been set to the TC position.

❾ **REMOTE/LOCAL switch**

This switch is provided to enable the unit to be controlled from an external source using the REMOTE, RS-232C or parallel connector.

REMOTE: Set here when the unit is to be controlled using the 9-pin REMOTE, RS-232C or parallel remote connector.

LOCAL: Set here when the unit is to be controlled using the controls on its operation panel.

*1 The fast forward or rewind speed can be selected using setup menu item No. 102 (FF.REW MAX).

Parts and Their Functions

<Front panel centre>

- ⑫ **REMOTE lamp**
This lamp lights when the REMOTE setting has been selected by the REMOTE/LOCAL switch.
- ⑬ **Search button**
This button is pressed to establish the search mode.
When this button is pressed after the search dial is set to the shuttle mode and turned to the desired position, playback will commence at the speed which has been set by the search dial.
- ⑭ **JOG, SHTL and SLOW lamps**
These lamps indicate the current status of the search dial and SHTL/SLOW switch.
JOG: This lights when the JOG mode is established.
SHTL (shuttle): This lights when the SHTL mode is established.
SLOW: This lights when the VAR mode is established.
- ⑮ **SHTL/SLOW switch**
This selector switch is set when the search dial is to be used for SHTL or VAR purposes.
- ⑯ **REV, STILL and FWD lamps**
These lamps light in accordance with the search dial operation.
REV: This lights when the dial is rotated counterclockwise, and if the search button lamp is also lit at this time, the tape travels in the reverse direction.
STILL: In the JOG mode this lights when the dial rotation is stopped, and if the search button lamp is also lit at this time, the tape also stops travelling.
In the shuttle mode, it lights when the dial is at the STILL position.
FWD: This lights when the dial is rotated clockwise, and if the search button lamp is also lit at this time, the tape travels in the forward direction.
- ⑰ **Search dial**
This dial is used to locate the edit points.
Each time the dial is pressed, the shuttle mode or jog mode is selected alternately, and the JOG, SHTL or SLOW lamp lights.
When the unit's power is turned on, the search dial will not work unless it is first returned to the STILL position.
SHTL (shuttle) mode: If the dial is rotated and stopped at the desired position when the SHTL/SLOW switch has been set to SHTL, the tape can be played back at the speed that corresponds to the angle to which the dial has been rotated. A still picture will appear when the dial is set to its centre position.
When the SHTL/SLOW switch has been set to SLOW, the tape will travel at the -4.1x speed if the dial is rotated counterclockwise as far as it will go, a still picture will appear when it is set to its centre position, and the tape will travel at the +4.1x speed if the dial is rotated clockwise as far as it will go. The maximum speed at the SLOW setting can be selected by setup menu item No. 320 (VAR FWD MAX) or No. 321 (VAR REV MAX).
Jog mode: The dial's clickstop positions are cleared, and the tape is played back at the speed (see *) that corresponds to the speed with which the dial is rotated.
*1 DVCPRO50 (50 Mbps): -1x to +1x speed
DVCPRO (25 Mbps): -2x to +2x speed
DV: -1x to +1x speed

Parts and Their Functions

<Front panel centre>

- ⑱ **PREROLL button**
This button is used to cue the tape for a transmission, etc.
If it is pressed when a CUE point has been selected (when the CUE lamp is flashing), the tape is prerolled to the CUE point, and a still picture appears on the screen.
If it is pressed when a CUE point has not been selected, the tape will be prerolled from the point where the button was pressed, and a still picture will appear on the screen.
• The preroll time can be set using setup menu item No. 000 (P-ROLL TIME).
- ⑲ **CUE UP button**
This button is used to cue the tape for a transmission, etc.
If it is pressed when a CUE point has been selected (when the CUE lamp is flashing), the tape is prerolled to the CUE point, and a still picture appears on the screen.
If it is pressed when a CUE point has not been selected, the tape will be prerolled from the point where the button was pressed, and a still picture will appear on the screen.
• The preroll time can be set using setup menu item No. 016 (CU-ROLL TIME).
- ⑳ **CUE buttons 1 through 8**
These buttons are used to enter, check or erase cue points.
When a button is pressed at a cueing position on the tape, the cue point will be entered in that button.
To check a cue point which has been entered, press the CUE button in which the point was entered.
To erase a cue point, press the RESET button while holding down the CUE button.
- ㉑ **SET button**
This button is used when cue points are to be entered or erased.
When it is pressed at the cueing position, the cue point will be entered and the corresponding CUE button's lamp will light. When it is pressed at positions to which the tape is to be successively cued, the CUE buttons in which no cue points have been entered will light in sequence starting with the lowest number, and the cue points will be entered.
When the RESET button is pressed while the SET button is held down, all the registered cue points will be deleted.
- ㉒ **Counter display area**
The TC and CTL count values as well as the messages and other on-screen information appear on the counter display area.
- ㉓ **RESET button**
When this button is pressed in the CTL mode, the display is cleared to "00:00:00:00."
- ㉔ **Warning lamp**
This lamp lights when a warning is issued.
- ㉕ **Cassette Insertion display lamp**
This lamp lights when a cassette has been inserted into the unit.
- ㉖ **DVCPRO (25 Mbps) cassette playback display lamp**
This lamp lights when a cassette recorded using the DVCPRO (25 Mbps) format is played back.
- ㉗ **SCH lamp**
This lamp lights when the SCH phase of the external sync signal is within the specified range.

Parts and Their Functions

<Front panel centre>

⑭ CF lamp

This lamp lights when the colour framing is locked.

⑮ Level meter

The playback levels for channels 1, 2, 3 and 4 of the PCM audio signals and for the cue track signals are displayed by this meter.

⑯ Audio output level controls

These controls are used to adjust the playback levels for channels 1, 2, 3 and 4 of the PCM audio signals and for the cue track signals.

They use a "pull to vary level" system which means that the levels can be adjusted after they have been pulled up. The unity (default) levels apply when they are pushed down.

⑰ Headphones jack

When a pair of stereo headphones are connected to this jack, the sound being played back can be monitored through the headphones.

⑱ Volume control

This control is used to adjust the headphones volume and monitor output volume.

Setup menu item No. 713 (MONI OUT) can be used to set whether the headphones output and monitor output are to be linked together or separated. (However, the headphones are always linked to the monitor output.) When the two outputs are separated, the monitor output is set the unity (default) level.

⑲ MONITOR SELECT switches

These switches are used to select the audio signals which are to be output to the monitor L and R channels.

Each time the "L" button is pressed, the signals which are to be output to the monitor L channel are switched in the following sequence: CH1, CH2, CH3, CH4, CUE, CH1, etc.

[This switching is disabled when CH1+2 or CH3+4 has been selected as the setup menu item No. 729 (MONI MIX L) setting.]

Each time the "R" button is pressed, the signals which are output to the monitor R channel are switched in the following sequence: CH1, CH2, CH3, CH4, CUE, CH1, etc.

[This switching is disabled when CH1+2 or CH3+4 has been selected as the setup menu item No. 730 (MONI MIX R) setting.]

The signals which have been selected are indicated by the L or R lamps which light on the level meter display area. [When AUTO has been selected as the setup menu item No. 721 (MONI CH SEL) setting, the display is switched in tandem with the monitor output.]

⑳ METER (FULL/FINE) selector switch

This switch is used to select the scale display on the audio level meter.

FULL mode: The standard scale (ranging from $-\infty$ to 0 dB) is selected.

FINE mode: The scale in 0.5 dB increments is selected.

Parts and Their Functions

<Front panel bottom>

㉑ ENCODER CONTROL switch

This switch is used to select whether the adjustments of the video output signals are to be performed using the controls either on the unit or on an external encoder remote controller.

REMOTE: The video output signals are adjusted using the controls on the external encoder remote controller.

LOCAL: The video output signals are adjusted using the controls on the unit.

㉒ VIDEO LEVEL control and switch

These enable the video level to be adjusted when the ENCODER CONTROL switch has been set to the LOCAL position.

When the VIDEO LEVEL switch is set to PRESET, the video level is set to the unity (0 dB) level. When it is set to MANUAL, the video level can be adjusted using the control.

㉓ CHROMA LEVEL control and switch

These enable the chroma level to be adjusted when the ENCODER CONTROL switch has been set to the LOCAL position.

When the CHROMA LEVEL switch is set to PRESET, the chroma level is set to the unity (0 dB) level. When it is set to MANUAL, the chroma level can be adjusted using the control.

㉔ BLACK LEVEL control and switch

These enable the black level to be adjusted when the ENCODER CONTROL switch has been set to the LOCAL position.

When the BLACK LEVEL switch is set to PRESET, the black level is set to the unity (0 IRE) level. When it is set to MANUAL, the black level can be adjusted using the control.

㉕ CHROMA PHASE control and switch

These enable the chroma phase to be adjusted when the ENCODER CONTROL switch has been set to the LOCAL position.

When the CHROMA PHASE switch is set to PRESET, the hue is set to the unity (0°) level. When it is set to MANUAL, the chroma phase can be adjusted using the control.

㉖ CF switch

This switch is used to select either 4- or 8-field or 2-field increments for the playback framing lock.

4F/8F: 625 mode = The framing is locked in 4 or 8-field increments. The setup menu item No. 108 (CAP.LOCK) setting is used to switch between 4-field or 8-field increments.

525 mode = The framing is locked in 4-field increments.

2F: The framing is locked in 2-field increments.

㉗ TV SYSTEM selector switch

This switch is used to select the TV system. For this setting to take effect, the power must be turned off and then turned back on.

625: The 625 interlace/50 Hz TV system is selected.

525: The 525 interlace/59.94 Hz TV system is selected.

For playback, make sure that the switch is set to the position that corresponds to the TV system, 625i or 525i, which was used when the tape was recorded.

Parts and Their Functions

<Front panel bottom>

⑭ MENU button

When this button is pressed, the setup menu appears on the TV monitor (but only when the VIDEO OUT 3 connector is used), and the setup menu number appears on the unit's display. When it is pressed again, the setup menu setting is exited and the original operation is restored.

⑮ SET button

When this button is pressed, the data which has been set on the setup menu is entered. After the data has been entered, the setup menu setting is exited and the original operation is restored.

⑯ DIAG button

When this button is pressed, the VTR information is displayed. When it is pressed again, the original display is restored.

The VTR information consists of the HOUR METER information and WARNING information. The search button is pressed to switch between the displays of the two types of information.

Displayed on the HOURS METER screen are the deck's serial number, power-on time, drum rotation time, tape travel time, number of times the cassette has been loaded, and the number of times the power has been switched on and off.

Displayed on the WARNING screen is the nature of the warnings issued.

Parts and Their Functions

Connector panel

Parts and Their Functions

<Connector panel>

- ❶ **AC IN socket**
This is connected to the power outlet using the accessory power cord.
- ❷ **SIGNAL GND terminal**
This is connected to the signal ground terminal on the connected component for noise reduction purposes. It is not a safety ground.
- ❸ **Fuse holder**
This contains a fuse.
- ❹ **Fan motor**
This motor drives the fan that cools down the unit.
The ❶ lamp lights when trouble in some form or other has caused the fan motor to shut down. If operation is continued while this warning condition persists, the temperature inside the deck will rise, and once it has exceeded the safe temperature level, all the unit's operations will be shut down.
- ❺ **TIME CODE OUT connector**
The playback time code signals are output from this connector.
- ❻ **CUE OUT connector**
The analogue signals recorded on the CUE track are output from this connector.
- ❼ **MONITOR OUT connectors**
The PCM audio signals of CH1, CH2, CH3 and CH4 or the playback signals from the CUE track are output from this connector.
- ❽ **REF VIDEO IN connectors and 75Ω termination switch**
These are the input connectors for the reference video signal.
Supply a composite video signal such as a black burst signal complying with the broadcast standards (see *1). Set the switch to ON for a 75Ω termination.
*1 625: CCIR624
525: RS-170A
- ❾ **ANALOG AUDIO OUT connectors**
The analogue audio signals are output from these connectors.
- ❿ **ANALOG COMPONENT VIDEO OUT connectors**
The analogue component video signals are output from these connectors.
- ⓫ **ANALOG COMPOSITE VIDEO OUT connectors**
The analogue composite video signals are output from these connectors. Video signals with superimposed characters can be output from the VIDEO OUT 3 connector. Use setup menu item No. 007 (SUPER) to select ON or OFF as the superimposed character setting.
- ⓬ **DIGITAL AUDIO OUT connectors**
Digital audio signals complying with the AES/EBU standards are output from these connectors.
- ⓭ **SERIAL DIGITAL COMPONENT AUDIO/VIDEO OUT connectors**
Digital component audio and video signals complying with the EBU Tech. 3267-E standards are output from these connectors.

Parts and Their Functions

<Connector panel>

- ❶ **Remote control connectors**
The unit can be operated from an external source when it is connected with another player for deck-to-deck editing or with an external controller. There are two remote control connectors, one for input signals (IN) and the other for output signals (OUT).
IN: To be connected with an external controller.
To be connected for deck-to-deck operations.
OUT: To be connected for parallel run operations.
To be used for loop-through applications.
- ❷ **ENCODER REMOTE connector**
This is connected to an external encoder remote controller when the video output signal settings are to be adjusted from an external source.
- ❸ **RS-232C connector**
- ❹ **PARALLEL REMOTE connector**
This is used when the unit is to be operated from an external source.

Connections using one unit

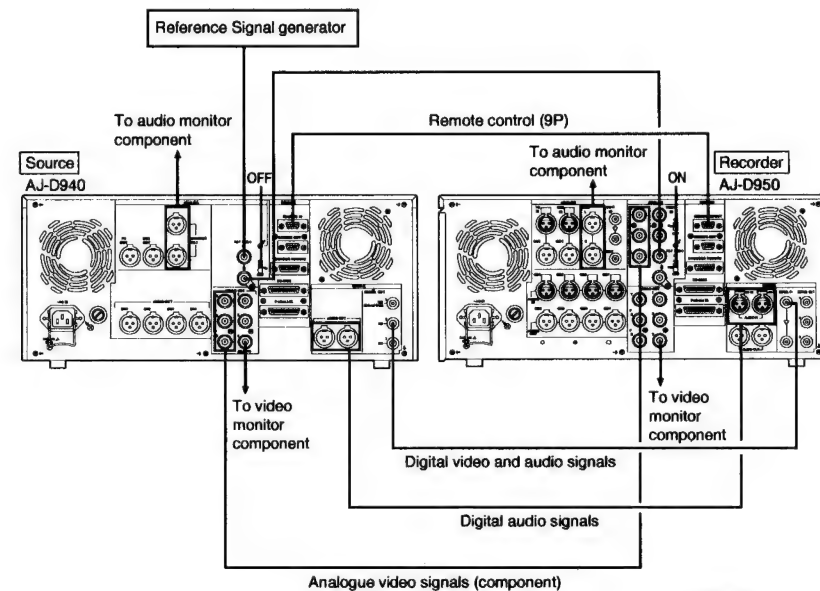

Set the CONTROL switch on the front panel to LOCAL.

Example of connections when the unit is used as the source machine for editing (deck-to-deck)

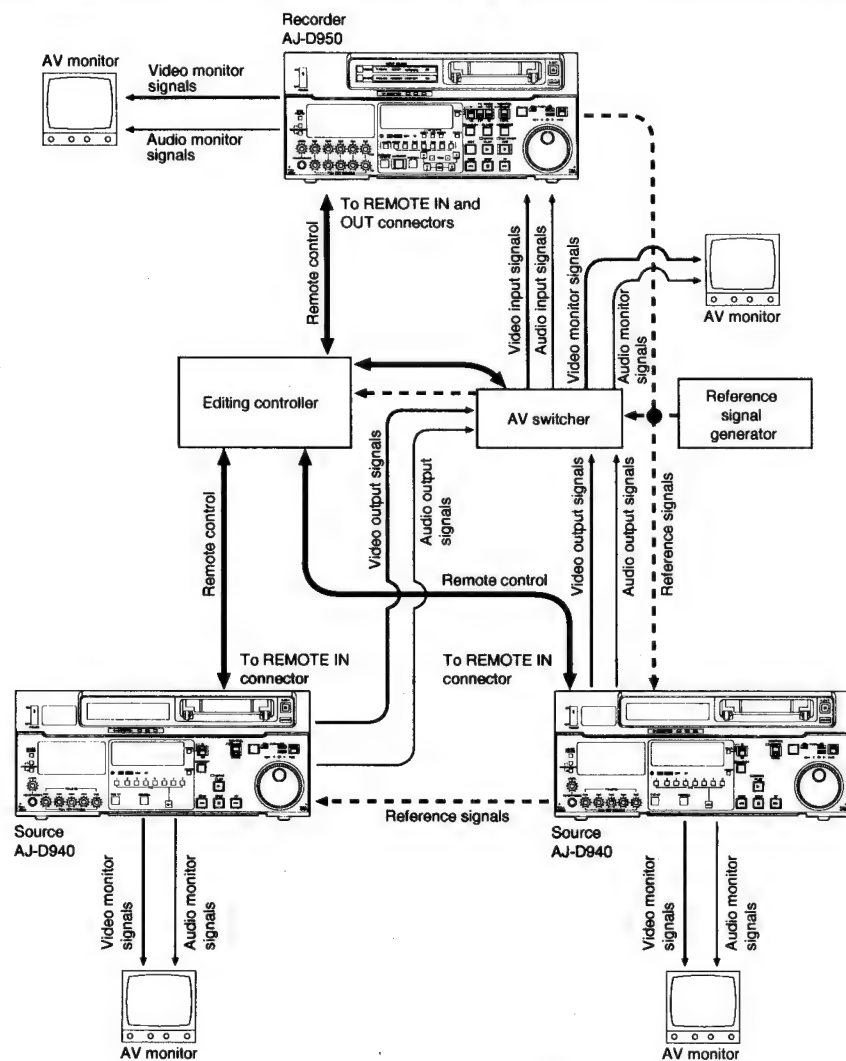

Source unit: Set the CONTROL switch on the front panel to REMOTE.

Recorder unit: Set the CONTROL switch on the front panel to LOCAL.

AJ-D950:
The analogue video input board (optional accessory) must be installed for use.

Example of connections with an editing controller

<Note>
If an editing controller made by CMX is to be used, steps must be taken at the editing controller side to support it.

Connections for adjusting the video output signals (encoder output)

Tapes

Type	Description
Consumer cassette (S size cassette)	These tapes are exclusively used with general consumer camera/recorders. They can be played back on the unit if a cassette adapter AJ-CS750P (available as an optional accessory) is used. However, bear in mind that long-playing cassette tapes (80 minutes in the standard mode; 120 minutes in the LP mode) cannot be used. It is recommended that Panasonic's DV tapes for general consumer applications be used. Bear in mind that inserting one of these cassette tapes without first installing the cassette adapter will cause malfunctioning.
M size cassette	Tapes with a maximum playback time of 33 minutes. (AJ-P66MP)
L cassette	DVCPRO (50 Mbps)
	For consumer use Standard playback cassette tapes for consumer use. For playback, select DV as the setup menu item No. 014 (FORMAT SEL) setting. Use of Panasonic's consumer-use DV tapes is recommended.

Align the cassette with the centre of the insertion slot, and gently push it inside. The cassette tape is automatically loaded.

<Note>

For AJ-5P92LP cassette tapes recorded using the DVCPRO (25 Mbps) mode, use a VTR supporting DVCPRO (25 Mbps) 184 minute tapes.

<Precautions when playing back general consumer DV tapes>

- General consumer tapes recorded in the LP mode cannot be played back.
- When material recorded on a general consumer tape is to be edited, either use a DVCPRO50 (50 Mbps) or DVCPRO (25 Mbps) tape or record the material on another VTR used for broadcast applications.
- The maximum speed at which general consumer tapes can be advanced is 32 times the normal tape speed.
- The maximum still mode time for general consumer tapes is set to 10 seconds.
- Cueing up a general consumer tape at the same position should be kept to the minimum in order to protect the tape from damage.
- The maximum time for STILL TIMER when a general consumer tape is used is set to 10 seconds, and the total time during which such a tape may be left standing in the STILL mode is set to 1 minute.

Switching on the Power/Inserting the Cassette

Before starting to operate the unit, check that the equipment has been connected properly.

- 1 Turn on the power.
- 2 Check that the AUTO OFF lamp is off.
In the event of condensation or other trouble, the AUTO OFF lamp lights, and all of the unit's operations are disabled.
- 3 Insert the cassette tape.
Insert the tape into the prescribe position without forcing it in any way.
- 4 Check that the STOP lamp is lit.
When the tape is inserted, the cylinder starts rotating automatically, the tape is loaded, and the STOP mode is established.
The EJECT lamp now goes off.

STOP/STANDBY mode

- 1 The stop mode is established when the STOP button is pressed. The STOP lamp lights, and the tape stops travelling.
 • In order to protect the tape, the standby OFF mode is established after the time set in setup menu item No. 400 (STILL TIMER) has elapsed.
 When the STOP, REW, FF or PLAY button is pressed, the corresponding mode is established.
- 2 When the STANDBY button is pressed, the standby ON or OFF mode is established. The standby ON mode is established while the button's lamp is lit.
 When the button is pressed in the stop mode, the standby OFF mode is established, the tape is set to the half-loading status, and the button's lamp goes off.
 When the button is pressed in the standby OFF mode, the standby ON mode is established.

<Precautions for the STILL TIMER setting>

- Remember that at times when the same material is repeatedly used such as when programmes are aired, the cumulative standby time in the same position will be increased.
- In order to protect the tape, make the standby time at the same tape locations as short as possible: for instance, select a maximum of 30 seconds or so as the setup menu item No. 400 (STILL TIMER) setting.

Playback

- 1 Insert the cassette tape and set the unit to the STOP mode.
- 2 Press the PLAY button. Normal playback now commences.
- 3 Adjust the audio playback levels. Pull out the audio level controls, and turn them clockwise or counterclockwise to adjust the levels. Normally, they are kept at their pushed-in positions (unity level).
- 4 To end playback, press the STOP button. The unit is now set to the stop mode.

<Note>

Check that the SERVO lamp remains lit during playback. The playback pictures will be disturbed if the lamp is flashing or off.

Jog/Shuttle

Jog mode

- 1 Push the search dial to set it to its "in" position. Check that the JOG lamp is lit.
- 2 Rotate the search dial.
The clickstop positions of the dial are cleared, and the tape is played back at a speed (-1x to +1x) corresponding to the speed at which the dial is rotated. When the rotation of the dial is stopped, a still picture appears. The playback picture is free from noise.
- 3 To transfer operation from the jog mode to another mode, press the button which corresponds to the mode which is to be transferred to.

Shuttle mode

- 1 Push the search dial to release it from its "in" position.
The SHTL lamp now lights, and the shuttle mode is established.
• Immediately after the power is turned on, rotate the search dial and set it to its centre position.
- 2 Set the SHTL/SLOW switch to the SHTL or SLOW position.
- 3 Rotate the search dial.
When the SHTL/SLOW switch is set to the SHTL position, the speed of the playback picture is varied in the 0 to $\pm 32\times$ range depending on the dial's position. (The speed can be switched to $\pm 8.4\times$, $\pm 16\times$ or $\pm 32\times$ using setup menu item No. 101 (SHTL MAX).)
The dial is set to the clickstop at the centre: at this position a still picture appears on the screen.
When the SHTL/SLOW switch is set to the SLOW position, the speed of the playback picture is varied in the $-4.1\times$ to $+4.1\times$ range depending on the dial's position. (The maximum speed can be selected using setup menu item No. 320 (VAR FWD MAX) and No. 321 (VAR REV MAX). However, noise will appear at any speed outside the $-1\times$ to $+1\times$ range for the DVCPRO50 (50 Mbps) format, the $-2\times$ to $+2\times$ range for the DVCPRO (25 Mbps) format and the $-1\times$ to $+1\times$ range for the DV format.) The dial is set to the clickstop at the centre: at this position a still picture appears on the screen.
The playback picture is free from noise.
- 4 To transfer operation from the shuttle mode to another mode, press the STOP button or another button.

<Note>

The unit is set at the factory in such a way that operation will be transferred to the shuttle or jog mode when the search dial is rotated. If it is inconvenient to transfer directly to the variable speed mode, operation transfer can be set up to go through the search button. Set setup menu item No. 100 (SEARCH ENA) to KEY.

MULTI CUE Function

Entering CUE points

■ Automatic entry

Using the search dial or in the PLAY mode, press the SET button at the place where the tape is to be cued. The CUE button in which the CUE point was entered now lights.

Each time the SET button is pressed at the next place where the tape is to be cued, the CUE point will be entered into the CUE button, in which a CUE point has not yet been entered, in sequence starting with the button having the lowest number.

<Note>

When CUE points are entered in all 8 buttons, no further points will be entered even when the SET button is pressed. In this case, either overwrite an existing entry using the procedure for entry into a particular CUE button or reset the CUE point entry and then enter another CUE point.

■ Entry into a particular CUE button

There are two procedures for entering a CUE point into a particular CUE button.

- When a CUE point is to be entered into a CUE button in which no CUE point has been entered, press one of the CUE buttons (CUE 1 to CUE 8) directly at the place where the tape is to be cued. The lamp of the CUE button which was pressed now lights, indicating that the CUE point has been entered for that button.
- When a CUE point is to be entered into a CUE button in which a CUE point has already been entered, press the CUE button and SET button together at the place where the tape is to be used. In this case, the previous CUE point in the CUE button will be overwritten and a new CUE point will be entered.

MULTI CUE Function

Checking CUE points

Press one of the CUE buttons in which a CUE point has been entered to check the CUE point. The value of the entered CUE point appears on the display and the CUE button which was pressed now flashes. To release the flashing of the CUE button, either press the flashing CUE button or press another CUE button in which a CUE point has been entered. In this case, the flashing moves to the CUE button which was pressed.

■ Cueing up the tape to the CUE point

Press the CUE UP button while the CUE button is flashing. When this button is pressed, the tape is prerolled to the CUE point, and a still picture appears on the screen.

- The preroll time can be set using setup menu item No. 016 (CU-ROLL TIME).
- The mode to be established upon completion of the prerolling can be set to the STOP or STILL by setting setup menu item No. 315 (AFTER CUE-UP).

<Note>

If the button is pressed when no CUE point has been selected, the tape will be prerolled from the point where the button was pressed, and a still picture will appear on the screen.

■ Prerolling the tape to the CUE point

Press the PREROLL button while the CUE button is flashing. When this button is pressed, the tape is prerolled to the CUE point, and a still picture appears on the screen.

- The preroll time can be set using setup menu item No. 000 (P-ROLL TIME).
- The mode to be established upon completion of the prerolling can be set to the STOP or STILL by setting setup menu item No. 315 (AFTER CUE-UP).

<Note>

If the button is pressed when no CUE point has been selected, the tape will be prerolled from the point where the button was pressed, and a still picture will appear on the screen.

MULTI CUE Function

Clearing CUE points

■ Clearing a particular CUE point

Press the RESET button while holding down the CUE button in which the point to be cleared has been entered. The entered CUE point will be reset, and the lamp of the CUE button concerned will go off at the same time.

■ Clearing all the CUE points together

Press the RESET button while holding down the SET button. All the entered CUE points will be reset and all the lamps of the CUE buttons will go off at the same time.

<Notes>

- The following applies when the CTL mode has been set. When the RESET button is pressed while the SET button is held down, all the entered CUE points will be reset but the CTL value will not be reset. Conversely, when the SET button is pressed while the RESET button is held down, all the entered CUE points will be reset and the CTL value will also be reset.
- The entered CUE points are not reset even when the tape is ejected. In the CTL mode, only the CTL value is reset.

Video Output Signal (Encoder Output) Adjustments

In order to ensure an accuracy which is free from errors during editing when proceeding with AB roll editing (editing using two source units) using editors, it is necessary to adjust the video output signal (ENCODER OUT) after the system connections have been performed. (These adjustments must be performed again each time a connecting cable has been replaced or the connections are changed.)

The adjustment procedure for this unit is described below.

- 1 Check the connections. (See page 21)
- 2 Set the **REMOTE/LOCAL** switch at the bottom of the front panel to the adjustment position (LOCAL).
REMOTE: The video output signals are adjusted using the external encoder remote controller.
LOCAL: The video output signals are adjusted using the controls on this unit.
- 3 Perform the adjustments separately for each source unit.
 - 3-1 **When the preset values are to be used**
 Set the PRESET/MANUAL switches for VIDEO LEVEL, CHROMA LEVEL, BLACK LEVEL and CHROMA PHASE to the PRESET position.
 - 3-2 **When adjusting the video output signals without using the PRESET values**
 - 1 Play back a cassette tape on which standard colour bars have been recorded.
 - 2 Adjust the controls in such a way that the following will appear on the waveform monitor (WFM) and vectorscope (VSC).

A Black level:

Adjust in such a way as to eliminate any deviation.

B Video level:

Adjust to 700 mV.

C Chroma level and chroma phase:

Adjust the two controls and place the vector waveform traces within the square grid mark.

■ Waveform on WFM

■ Waveform on VSC

- 4 Adjust the connected source units in the same way.

Setup (Default Settings)

The unit's main settings are performed while making selections using a menu system. The setting menus will appear on a TV screen when the VIDEO OUT 3 connector on the connector panel has been connected to a TV monitor.

Changing the settings

- 1 Press the MENU button.
 The setup menu screen appears on the TV monitor, and the setup menu item number appears on the unit's counter display.
 (When setup has already been performed, the screen showing the changes made last is displayed.)
- 2 Rotate the search dial and select the item to be set.
 The cursor (*) moves on the menu screen, and the item number on the display flashes.
 • When the dial is rotated clockwise, the flashing item number is incremented (001 → 002 → 003 → 004 → and so on); when it is rotated counterclockwise, it is decremented.
 • When the FF or REW button is pressed while the PLAY button is held down, the next or previous item is selected.
 • Use the search dial in the JOG mode whenever possible.
- 3 Rotate the search dial while holding down the search button at the position where the change is to be made. The menu screen and setting on the display flash.
 When the dial is rotated clockwise, the setting is incremented; when it is rotated counterclockwise, it is decremented.
- 4 Release the search button when the settings are completed. The item number now flashes.
 • When the search dial is in the SHTL mode, the item will move unless the dial is held at the STILL position.
- 5 Repeat steps 2 to 4 if another item is to be changed.
- 6 Press the SET button. The changes made are now stored in the memory. To return the settings to what was set before the changes were made, press the MENU button.
 • To return the setup settings to the factory (default) settings, press the RESET button while the menu is displayed. The following message will appear.

SETUP-MENU INIT SET
YES<PLAY>/NO<STOP>

When the PLAY button is now pressed, the factory settings will be restored.

<Notes>

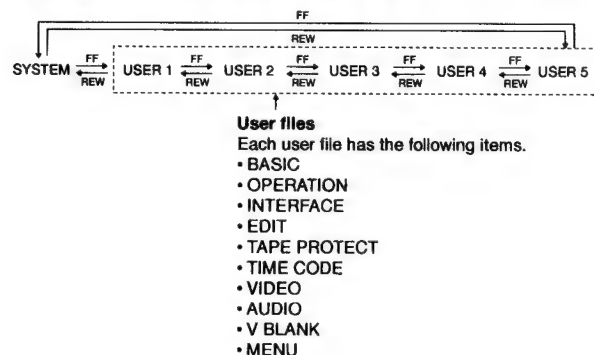

- When the RESET button is pressed to restore the factory settings, the change will be made for the user file in current use only. The other user files will not be affected.
- The changes made to the SYSTEM menu settings can be stored in the memory also by pressing the MENU button.

Setup (Setting) Menus

This unit offers five user files each of which can hold different menu settings. One of these files can be selected for use as the situation demands.

Changing the file

- 1 Press the MENU button.
- 2 When the FF button is pressed while the STANDBY button is held down, the next user file is selected in place of the current user file. Conversely, when the REW button is pressed while the STANDBY button is held down, the previous user file is selected in place of the current user file.

- 3 When the user file to be used has been selected in step 2, press the SET button. The user file is changed and stored in the memory.

<Note>

The SYSTEM menu items are not contained in user files 1 to 5. Therefore, to set the SYSTEM menu items, select the user file and switch to the SYSTEM file.

Setup Menus

The lock mode can be set to protect the settings in the system file and user files (USER2 to USER5). Once the lock mode has been set, it is no longer possible to change the settings. The setting and release of the lock mode can be performed using setup menu item No. 30 (MENU LOCK) for the system file and using setup menu item No. A03 (MENU LOCK) for the user files.

Setting and releasing the lock mode

- 1 Press the MENU button.
- 2 Press the FF or REW button while the STANDBY button is held down to select the file for which the lock mode is to be set or released.
- 3 Rotate the search dial, and move the cursor (*) on the menu screen to No. 30 (MENU LOCK) for the system file or to No. A03 (MENU LOCK) for the user files.
- 4 Rotate the search dial while the search button is held down, and select whether to set or release lock mode.
Set lock: Set the setting to 0001 (ON).
Release lock: Set the setting to 0000 (OFF).

When the lock is set, "LOCKED" appears at the top of the menu screen. In addition, the counter display stops flashing and lights up.

SETUP-MENU	LOCKED
<USER2>	No.000 - 0005
*000 P-ROLL TIME	5s
001 LOCAL ENA	ST&EJ
002 TAPE TIMER	±12h
003 REMAIN SEL	OFF
004 SETUP NUMBER	OFF
007 SUPER	ON
008 DISPLAY SEL	T&STA
009 CHARA H-POS	5
010 CHARA V-POS	23

- 5 Press the SET button. The setting is now stored in the memory.

<Notes>

- The lock mode cannot be set for the USER1 file.
- Once a file has been set to the lock mode, it cannot be reset to the factory settings even when the RESET button is pressed.

Setup Menu

The contents of the USER2 to USER5 files can be copied (loaded) to the USER1 file. Alternatively, the contents of the USER1 file can be copied (saved) to the USER2 to USER5 files.

Loading a user file

- 1 Press the MENU button.
- 2 Press the FF or REW button while the STANDBY button is held down and select USER1.
- 3 Rotate the search dial, and move the cursor (*) on the menu screen to No. A00 (LOAD).

```

SETUP-MENU  MENU
<USER1>    NO.A00 - 0000
804 BLANK LINE  BLANK
*A00 LOAD      USER2
A01 SAVE       USER2
A02 P.ON LOAD  OFF
END
  
```

- 4 Rotate the search dial while the search button is held down, and select the user file which is to be loaded in USER1.
- 5 Press the SET button. The following messages now appear on the menu screen and counter display.

Menu screen

```

SETUP-MENU LOAD

USER2 → USER1 OK?
YES<PLAY>/NO<STOP>
  
```

Counter display

```

TCR 00:00:00:00
SETUP LOAD U-2 → U-1
  
```

The number of the user file selected in step 4 is displayed in the shaded area.

- 6 Press the PLAY button. The settings in the user file selected in step 4 are loaded, and the USER1 menu display appears. If the STOP button is pressed instead, the USER1 menu display appears with its settings remaining unchanged.
- 7 Rotate the search dial, and move the cursor (*) on the menu screen to any item except No. A00 (LOAD) or No. A01 (SAVE).
- 8 Press the SET button. The USER1 settings are now stored in the memory. If they are not going to be stored in the memory, press the MENU button instead of the SET button.

Setup Menu

Saving a user file

- 1 Press the MENU button.
- 2 Press the FF or REW button while the STANDBY button is held down and select USER1.
- 3 Rotate the search dial, and move the cursor (*) on the menu screen to No. A01 (SAVE).

```

SETUP-MENU  MENU
<USER1>    NO.A00 - 0000
804 BLANK LINE  BLANK
A00 LOAD      USER2
*A01 SAVE       USER2
A02 P.ON LOAD  OFF
END
  
```

- 4 Rotate the search dial while the search button is held down, and select the user file in which the USER1 settings are to be saved. User files which have been set to the lock mode will not be displayed at this time. If all the user files are set to the lock mode, the "LOCKED" display appears, and the save operation cannot be performed.
- 5 Press the SET button. The following messages now appear on the menu screen and counter display.

Menu screen

```

SETUP-MENU SAVE

USER1 → USER2 OK?
YES<PLAY>/NO<STOP>
  
```

Counter display

```

TCR 00:00:00:00
SETUP SAVE U-1 → U-2
  
```

The number of the user file selected in step 4 is displayed in the shaded area.

- 6 Press the PLAY button. The USER1 settings are saved in the user file selected in step 4. If the STOP button is pressed instead, the USER1 menu display appears with its settings remaining unchanged.
- 7 Rotate the search dial, and move the cursor (*) on the menu screen to any item except No. A00 (LOAD) or No. A01 (SAVE).
- 8 Press the SET button. The USER1 settings are now stored in the memory. If they are not going to be stored in the memory, press the MENU button instead of the SET button.

Automatically calling a user file when the power is turned on

If the user file to be loaded is set in advance using setup menu item No. A02 (P.ON LOAD), the file will be loaded into USER1 automatically when the power is turned on.

Item		Setting		Description
No.	Superimposed display	No.	Superimposed display	
110	MEMORY STOP	0000 0001	OFF ON	This selects whether the VTR is to stop automatically when the counter value reaches "0" during fast forwarding or rewinding in the CTL mode. 0: The VTR does not stop. 1: The VTR stops automatically. <Notes> 1. The stop mode concerned is either the stop or still-picture (SHTL STILL) mode depending on the setup menu item No. 315 (AFTER CUE-UP) setting. 2. When the AUTO REW function and MEMORY function have been selected at the same time, the AUTO REW function takes precedence.
111	FRZ MODE SEL	0000 0001 0002	DIS STBOFF SOF&EJ	This selects the image which is to be output in the STANDBY OFF (HALF LOADING) mode and EJECT mode. 0: The video output is muted. 1: In the STANDBY OFF (HALF LOADING) mode only, the playback picture corresponding to the point in time when the STANDBY OFF mode was established is frozen and output. 2: In the STANDBY OFF (HALF LOADING) and EJECT mode, the playback picture corresponding to the point in time when the mode was established is frozen and output. <Note> The mode of field freeze is used when the playback picture is frozen.

"_" denotes the factory setting.

Description of memory stop function

- When the FF button is pressed, the VTR performs the regular fast forward operation since the zero point is not located in the direction of operation.
- When the REW button is pressed, the PREROLL lamp lights (the SHTL lamp also lights), the VTR proceeds with the preroll operation, and it automatically stops when it reaches the position where the counter reads "0".
- When the REW button is pressed, the VTR performs the regular rewind operation since the zero point is not located in the direction of operation.
- When the FF button is pressed, the PREROLL lamp lights (the SHTL lamp also lights), the VTR proceeds with the preroll operation, and it automatically stops when it reaches the position where the counter reads "0".

502	VITC POS-2	625 mode 0000 0006 0015 525 mode 0000 0006 0010	7L 13L 22L 10L 16L 20L	This sets the position where the VITC signal is to be inserted. (The same line as for VITC POS-1 in 501 cannot be selected.)
507	PHASE CORR	0000 0001	OFF ON	This selects whether to control the phase correction of the LTC output during playback. 0: Phase correction control is not performed. 1: Phase correction control is performed.
509	DF MODE	0000 0001	DE NDF	This selects the DF or NDF mode for CTL. 0: Drop frame mode 1: Non-drop frame mode <Notes> • This item is valid when the unit is in the LOCAL mode or when "ENA" is selected as the menu setup item No. 001 (LOCAL ENA). • This setup menu item is not displayed in the 625 mode.
511	VITC OUT	0000 0001	SBC VAUX	This selects the method of outputting VITC which is superimposed onto the video output signals. SBC: The time code recorded in the SBC area is output as the VITC. VAUX: The time code recorded in the VAUX area is output as the VITC.

"_" denotes the factory setting.

SBC (Sub Code Data) area

This area is separate from the video and audio data area on the helical track. It is used to store the time codes complying with the SMPTE/EBU standard. As with the conventional linear time code (LTC), the time code can be read even during rewinding or fast forwarding. It can also be read when the tape has stopped.

VAUX (Video Auxiliary Data) area

This area is located in the video data area on the helical track. It is used to store the auxiliary data relating to the video data.

<Note>

Control over the time code and user bit during tape play is exercised using the data recorded in the SBC area. In other words, data recorded in the SBC area is used as the source of the data which is displayed or superimposed or the data which is sent to the editing controller.

If the MENU is pressed instead, the settings will not be changed.
A01	SAVE	0000 0001 0002 0003 0004	USER2 USER3 USER4 USER5 LOCKED	This selects the user file in which the USER1 settings are to be saved. 0: The USER1 settings are to be saved in the USER2 file. 1: The USER1 settings are to be saved in the USER3 file. 2: The USER1 settings are to be saved in the USER4 file. 3: The USER1 settings are to be saved in the USER5 file. 4: The "LOCKED" display appears when the change prohibit status has been established for all the files. <Notes> • A user file for which change prohibit is set cannot be selected. • When the change prohibit status has been established for all the files, the "LOCKED" display appears, and the saving operation cannot be performed.
A02	P.ON LOAD	0000 0001 0002 0003 0004	OFF USER2 USER3 USER4 USER5	This selects the user file whose settings are to be loaded into USER1 when the power is turned on so that the unit will start up with these settings. 0: The unit is started up with the settings in the user file which was previously set. 1: The settings of USER2 are loaded in USER1 and the unit starts with these settings. 2: The settings of USER3 are loaded in USER1 and the unit starts with these settings. 3: The settings of USER4 are loaded in USER1 and the unit starts with these settings. 4: The settings of USER5 are loaded in USER1 and the unit starts with these settings.
A03	MENU LOCK	0000 0001	OFF ON	This selects whether the lock mode is to be set or released for the user files (USER2 to USER5). 0: The lock is released (changes to the files can be made). 1: The lock is set (no changes to the files can be made). <Note> The lock cannot be set for USER1.

"_" denotes the factory setting.

<Notes>

- Menu items No. A00 (LOAD), No. A01 (SAVE) and No. A02 (P.ON LOAD) can be set for the USER1 file only. They will not appear for the USER2 to USER5 files.
- Menu item No. A03 (MENU LOCK) can be set for the USER2 to USER5 files only. It will not appear for the USER1 files.

Time Code/User Bit

Time code

The time codes are used when their values are to be read by the time code reader (time code signal reader) and the absolute position of the tape is to be displayed in increments of hours, minutes, seconds and frames.

The time codes are written in the sub-code area (data area) of the helical track. They enable the VTR's playback speed to be read from the stop mode to slow-motion playback up to high-speed speed play (approx. 50× normal speed or approx. 100× when a DVCPRO tape is used).

The time code values are shown on the display or superimposed.

TCR 00 : 07 : 04 : 24
 ↑ ↑ ↑ ↑
 Hours Minutes Seconds Frames

User bit

The "user bit" refers to the 32-bit (8-digit) data frame among the time code signals which has been released to users.

Time Code/User Bit Playback

- 1 Set the unit to the stop mode.
- 2 Set the TC/CTL switch to TC.
- 3 Set the TC/UB switch to TC or UB.
TC: The time code is displayed.
UB: The user bit is displayed.
 • When it is no longer possible to read the time code, it is interpolated using the CTL signal.
- 4 Press the PLAY button.
 Playback now commences, and the time code appears on the display.
 When "ON" has been selected as the setup menu item No. 007 (SUPER), the time code value is superimposed onto the video signal from the VIDEO OUT 3 connector.

<Notes>

- The colon between the seconds and frames changes to a period in the drop frame time code is read. (In the 525 mode only.)
- When the time code signal is missing, it is automatically compensated for using the CTL signal. In this case, the following display appears.

T * R 00:01:04:07

When the time code signal is missing, an asterisk (*) appears here.

The colon between the seconds and frames changes to a period in the drop frame mode. (In the 525 mode only.)

Superimpose Screen

The control signals, time code, etc. are displayed using abbreviations.

TV monitor

CTL = control signal
 TCR = TC time code reading
 UBR = TC user bit reading

Characters displayed

The background of the characters superimposed on the display can be changed using setup menu item No. 011 (CHARA TYPE).

TV monitor

Display position

The position of the characters superimposed on the display can be changed using setup menu items No. 009 (CHARA H-POS) and No. 010 (CHARA V-POS).

TV monitor

TV monitor

Operation mode

The VTR's operation mode can also be displayed using setup menu item No. 008 (DISPLAY SEL).

TV monitor

VTR's operation mode

Servo Reference

This unit automatically selects the reference video signal which is supplied from the REF VIDEO input connector or the internal sync signal (INT) as the servo reference signal. When the signal is selected, the unit's mode and servo reference setting stand in the relationship shown in the flowchart presented below.

Audio V Fade Function

When a tape is edited, the information on the edit point splicing method selected is recorded on the tape. This information is therefore sensed when the tape is inserted and played back, and V fade or cut processing is automatically performed for these sections [but only when "AUTO" has been set as the playback fade selection (setup menu item No. 727)].

When "CUT" is set as the edit point splicing method

When "FADE" is set as the edit point splicing method

<Notes>

- When "CUT" is set as the edit point splicing method (setup menu item No. 727), cut processing is performed for all the splices.
- When "FADE" is set as the edit point splicing method (setup menu item No. 727), V fade processing is performed for all the splices.

Selecting the Audio Monitor Output

Monitor output channels

The monitor output channels can be selected using the MONITOR SELECT switches as shown below.

Monitor output	Output signals
L	CH1/CH2/CH3/CH4/CH1+CH2/CH3+CH4/CUE
R	CH1/CH2/CH3/CH4/CH1+CH2/CH3+CH4/CUE

MONITOR SELECT switches

Rack Mounting

The unit can be mounted into a 19-inch standard rack if the AJ-MA75P rack-mounting adaptors (optional accessory) are used. For the installation rails, it is recommended that the rail and bracket for 18" length (model number CC3061-99-0400) of CHASSIS TRAK be used. (The complete slide rail and bracket unit is not available from Panasonic.) For further details, consult with your dealer.

- 1 Remove the screws on the left and right sides of the unit.
- 2 Use the screws which have just been removed to attach the inner members of the slide rails.

Inner member

The length of the screws used is subject to restriction. If some of the mounting screws have been lost or misplaced, use screws which are less than 10 mm long in their place. Four screws must be used to secure each inner member.

- 3 Attach the outer member brackets to the rack. Check that the height is the same for the left and right brackets.
- 4 Attach the AJ-MA75P rack-mounting adaptors with the four screws supplied.

Rack-mounting adaptor

- 1 Remove the four rubber feet from the bottom of the unit, and install the unit in the rack. After the unit has been installed, check that it moves smoothly along the rails.

Standard rack

<Notes>

- Keep the temperature inside the rack to between 5°C and 40°C.
- Bolt the rack securely to the floor so that it will not topple over when the VTR is drawn out.

Video Head Cleaning

This unit has an auto head cleaning function which automatically reduces the dirt on the heads. However, to further increase the unit's reliability, it is recommended that its video heads be cleaned every day.
Use the cleaning fluid designated by Panasonic.

Condensation

Condensation forms due to the same principle involved when droplets of water form on a window pane of a heated room. This phenomenon occurs when the unit or tape is moved between places where the temperature or humidity varies greatly or when, for instance:

- It is moved to a very humid place full of steam or a room immediately after it has been heated up.
- It is suddenly moved from an air-conditioned location to a hot or humid location.

When moving the unit or tape to locations such as these, leave it standing for about 10 minutes instead of switching on the power immediately.

If condensation has formed on or in the unit, the AUTO OFF lamp lights, and the cassette tape is automatically ejected.

Keep the power supplied and wait until the AUTO OFF lamp goes off.

■ Maintenance

Before proceeding with maintenance, be absolutely sure to set the power switch to OFF and take hold of the power plug and unplug it from the power outlet.

Use a soft cloth to clean the cabinet. In the case of stubborn dirt, dilute some kitchen detergent, soak a cloth in the solution, wring it out well, and wipe the surfaces clean. Then wipe up the remaining moisture using a dry cloth.

- Do not insert fingers or any objects into the video cassette holder.
- Avoid operating or leaving the unit near strong magnetic fields. Be especially careful of large audio speakers.
- Avoid operating or storing the unit in an excessively hot, cold, or damp environment as this may result in damage both to the unit and to the tape.
- Do not spray any cleaner or wax directly on the unit.
- If the unit is not going to be used for a length of time, protect it from dirt and dust.

- Do not leave a cassette in the unit when not in use.
- Do not block the ventilation slots of the unit.
- Use this unit horizontally and do not place anything on the top panel.
- Do not attempt to disassemble the unit. There are no user serviceable parts inside.
- If any liquid spills inside the recorder, have the unit examined for possible damage.
- Refer any needed servicing to authorized service personnel.

Error Messages

When a warning occurs in this unit, the warning lamp lights up.

Open the DIAG menu. A description of the warning will now appear on the counter display and TV monitor. In addition, if trouble has occurred in the operation of the unit, the AUTO OFF lamp lights, and a message appears on the counter display.

DIAG menu

This displays the VTR information.

The VTR information includes the warning information, the deck's serial number, and hour meter (usage time) information. The DIAG menu appears on the TV monitor when the TV monitor has been connected to the VIDEO OUT 3 connector on the connector panel.

Displaying the DIAG menu

- 1** Press the DIAG button.
The DIAG menu screen appears on the TV monitor, and a message appears on the counter display.
- 2** Each time the search button is pressed, the display is switched to the warning information, the deck's serial number and hour meter information in this order.
- 3** Press the DIAG button to return to the original display.

Warning information display

- A warning message appears whenever a warning occurs (the warning lamp lights). When a warning has not occurred, "NO WARNING" is displayed.
- When more than one warning has occurred, a description of each warning can be checked by turning the search dial.

Error Messages

Displaying the hour meter information

Turn the search dial to move the cursor (*), and a description of the item where the cursor is located will appear on the counter display.

Item No.	Item	Description
Ser	*****	This displays the deck's serial number.
H00	OPERATION	This displays the number of hours during which the power has been supplied in 1-hour units.
H01	DRUM RUN	This displays the number of hours during which the drum has been rotating in 1-hour units.
H02	TAPE RUN	This displays the number of hours during which the tape has travelled in the FF, REW, PLAY and SEARCH (JOG, VAR, SHTL) modes in 1-hour units.
H03	THREADING	This displays the number of times the tape has been threaded and unthreaded in 1-time units.
H11	DRUM RUN r	This displays the number of hours during which the drum has been rotating in 1-hour units. (The display can be reset.)
H12	TAPE RUN r	This displays the number of hours during which the tape has travelled in the FF, REW, PLAY and SEARCH (JOG, VAR, SHTL) modes in 1-hour units. (The display can be reset.)
H13	THREADING r	This displays the number of times the tape has been threaded and unthreaded in 1-time units. (The display can be reset.)
H30	POWER ON	This displays the number of times the power has been turned on in 1-time units.

<Notes>

- The hour meter information items which can be reset are reset by the dealer when maintenance work, etc. has been performed.
- Operations involving the search button and search dial cannot be performed while the DIAG menu is displayed.

If "T&S&M" has been selected as the setup menu item No. 008 (DISPLAY SEL) setting, the message will appear on the mode display area when a warning or error has occurred. When two or more warnings or errors have occurred, they are displayed in sequence of priority starting with the one which has the highest priority.

Priority	Display	Description
High ↑ ↓ Low	Error messages (see error message table)	When trouble has occurred in the operation of the unit, the AUTO OFF lamp lights, and an error message is displayed.
	ILLEGAL REF	When illegal signals, which are not black burst or other composite signals complying with the broadcast standards (625: CCIR624, 525: RS-170A), have been supplied to the REF VIDEO input connector, the message shown on the left may appear depending on the signal concerned. Since, in a case like this, it cannot be guaranteed that the VTR will operate properly, eject the cassette and turn off the power. <Note> The tape will not be damaged even when this message appears.
	Warning messages (see error message table)	When a warning occurs, the warning lamp lights, and a warning message is displayed. When two or more warnings have occurred, they are displayed in sequence of priority starting with the one which has the highest priority.

Warning messages

Priority	On counter display and TV monitor	Description	VTR operation
High ↑ ↓ Low	FAN STOP	This appears when the fan motor has stopped.	The VTR continues operating.
	NO RF	This appears when a blank portion of the tape lasting more than 1 second has been detected during playback. Any portion of the tape is recognized as a blank when all the following conditions are satisfied: • When no signals are output from any of the heads. • When no playback data can be read. • When there is no CTL signal (this does not apply with DV tapes for general consumer applications).	The VTR continues operating.
	SERVO NOT LOCKED	This appears when the servo is not locked for 3 or more seconds during playback.	The VTR continues operating.
	LOW RF	This appears when it has been detected that the envelope level has dropped to approximately one-third of its usual level during playback.	The VTR continues operating.
	HIGH ERROR RATE	This appears when the error rate increases, and correction or interpolation is performed for either the video or audio playback signals.	The VTR continues operating.

Error Messages (when AUTO OFF lamp lights)

On counter display	On TV monitor	Description	VTR operation (restart action)
CAP ROTATE TOO SLOW	CAP ROTA TOO SLOW	When the capstan motor speed is abnormally low, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF → ON)
CAP TENSION ERROR	CAP TENSION ERROR	When abnormal tension is detected at the supply side in the capstan mode, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF → ON)
DEW	DEW	When condensation is detected, the AUTO OFF lamp lights, the message display flashes, and the VTR is transferred to the eject mode. After the tape is ejected, the drum rotates in order to dry out the condensation. When the condensation has dried out, the AUTO OFF lamp goes off, the message display is cleared, and the VTR can be operated again. • When condensation is detected in the eject mode, the drum starts rotating as soon as it is detected. • When condensation is detected when the cassette has been inserted, the drum rotation is stopped, and after the tape is ejected, the drum starts rotating.	Eject
DRUM ROTATE TOO FAST	DRUM ROTA TOO FAST	When the cylinder motor speed is abnormally high, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF → ON)
DRUM ROTATE TOO SLOW	DRUM ROTA TOO SLOW	When the cylinder motor speed is abnormally low, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF → ON)
E-FF	E-FF	When the tape start and tape end are detected simultaneously either during or after loading, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF → ON)
FRONT LOAD ERROR	FRONT LOAD ERROR	When the take-up reel has been rotating without taking up the tape for a specific period of time while the start or end processing operation during loading (half position) is being performed, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF → ON)
FRONT LOAD MOTOR	FRONT LOAD MOTOR	When the cassette fails to move up even when 6 seconds have elapsed after the eject mode was established, the AUTO OFF lamp lights, and the message display flashes. <Note> When the cassette fails to move down even when 6 seconds have elapsed after the cassette was inserted, the eject mode is established.	Stop (power OFF → ON)
LOADING MOTOR	LOADING MOTOR	When the unloading operation fails to be completed within 6 seconds, the AUTO OFF lamp lights, and the message display flashes. <Note> When the loading operations fails to be completed within 6 seconds, the eject mode (unloading mode) is established.	Stop (power OFF → ON)
REEL DIR UNMATCH	REEL DIR UNMATCH	When the take-up reel motor is running in the reverse direction, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF → ON)

Error Messages (when AUTO OFF lamp lights)

On counter display	On TV monitor	Description	VTR operation (restart action)
REEL TENSION ERROR	REEL TENSION ERROR	When abnormal tension at the supply side is detected in the reel mode, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF → ON)
SERVO COMM ERROR	SERVO COMM ERROR	When the servo microcomputer does not follow the instructions of the system control microcomputer even after 10 seconds have elapsed, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF → ON)
SERVO CONTROL ERROR	SERVO CONTROL ERR	When there is no response from the servo microcomputer for 1 or more seconds, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF → ON)
SERVO ERROR	SERVO ERROR	When only the servo microcomputer was reset in an instantaneous power failure, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF → ON)
S-FF/REW TIMEOVER	S-FF/REW TIMEOVER	When the start or end processing operation fails to be completed, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF → ON)
S REEL ROTA TOO FAST	S REEL TOO FAST	When the supply reel motor rotates at an abnormally fast rate, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF → ON)
S REEL TORQUE ERROR	S REEL TORQUE ERR	When an abnormal torque applied to the supply reel motor is detected or an abnormal current flowing to the current-sensing resistor is detected, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF → ON)
T REEL ROTA TOO FAST	T REEL TOO FAST	When the take-up reel motor rotates at an abnormally fast rate, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF → ON)
T REEL TORQUE ERROR	T REEL TORQUE ERR	When an abnormal torque applied to the take-up reel motor is detected, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF → ON)
UNLOAD ERROR	UNLOAD ERROR	When the tape has not been wound up during unloading, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF → ON)
WINDUP ERROR	WINDUP ERROR	If, after the total tape amount has been detected, the amount of tape wound up on the take-up reel and the amount of tape supplied by the supply reel differ to an abnormal extent while the tape is travelling, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF → ON)
WINDUP REEL NOT ROTA	W-UP REEL NOT ROTA	If, after the cassette has been inserted, the tape take-up reel has not wound up the tape while the total tape amount is not detected and while the tape is travelling, the AUTO OFF lamp lights, and the message display flashes.	Stop (power OFF → ON)

RS-232C Interface

1. Introduction

(1) The VTR can be operated by commands when the RS-232 interface is used.
(See command tables on pages 68 to 70.)

(2) Conditions for acknowledging commands from the RS-232C interface.
The front panel REMOTE/LOCAL switch must be set to REMOTE.
The setup menu item No. 204 (RS232C SEL) must be set to ON.

If the above conditions are not met, [ACK] + [STX] ER001 [ETX] is returned to the external unit.
Whether the [ACK] code is returned depends on the setting which has been selected for setup menu item No. 209 (RETURN ACK).

2. Hardware specifications

External interface specifications

(1) Connector specifications

Connector: D-SUB 25-pin (crossover cable supported)

Pin No.	Signal	Circuit name	Description
1	FG	Protective ground	Frame ground
2	RXD	Received data	Data is sent to PC.
3	TXD	Transmitted data	Data is received from PC.
4	CTS	Clear to send	Shorted with pin 5.
5	RTS	Request to send	Shorted with pin 4.
6	DTR	Data terminal ready	Not processed
7	SG	Signal ground	Signal ground
20	DSR	Data set ready	+ voltage output after communication enable status

(2) Example of connections with controller (PC)

(Using crossover cable with D-SUB 25-pin connectors)

PC side
(D-SUB 25-pin connector)

(Using crossover cable with D-SUB 9-pin and 25-pin connectors)

PC side
(D-SUB 9-pin connector)

RS-232C Interface

3. Software specifications

Protocol

1) Communication parameters

Communication system	Asynchronous, full duplex
Baud rate	300, 600, 1200, 2400, 4800, <u>9600</u> bps
Data length	7 bits or <u>8 bits</u>
Stop bit	<u>1 bit</u> or 2 bits
Parity bit	<u>None</u> , odd or even
ACK code	ACK code <u>returned</u> or not returned <Note> The ACK code is what is returned from the VTR to the controller when data has been sent successfully from the controller.

"_" denotes the factory setting.

Changes to the settings can be made using the setup menu items listed below.

Communication parameter	Setup menu item
Communication system	No. 205 BAUD RATE
Data length	No. 206 DATA LENGTH
Stop bit	No. 207 STOP BIT
Parity bit	No. 208 PARITY
ACK code	No. 209 RETURN ACK

2) Send format [controller (PC) → VTR]

■ Data format

[STX] [command] [:] [data] [ETX]
 02h XX XX XX 3Ah XX-XX 03h ← (ASCII code: symbols, numbers, upper-case letters)

20h<XX<7Fh

- [command]: Command identifier; a 3-byte identifier (ASCII code: symbols, numbers, upper-case letters) is sent as the command.
- [:]: The colon serves as a delimiter between the command and data.
- [data]: Data (ASCII code: symbols, numbers, upper-case letters) can be added in the number of bytes required.

■ Outline of procedure for sending data from controller

- The send command starts with STX (start of text = 02h). The command is then identified by COMMAND which follows, and the data is added as required. The format ends with ETX (end of text = 03h).
- When a different command is to be sent, a response is awaited from the VTR, and then the command is sent. (See page 67)
- If STX is sent again before ETX is sent, the receive data buffer inside the VTR is cleared. A command error is returned to the controller, and the data is newly processed with STX, which was received again, at the head.

RS-232C Interface

(3) Return format [VTR → controller (PC)]

The following responses are made to the command. If necessary, more than one response may be made.

■ When the communication has terminated normally

- The receive completion message is returned.

[ACK]
 06h

- The execution completion message is returned.

[STX] [command] [data] [ETX]
 02h XX XX XX XX-XX 03h

- [command]: This is the message (data) which is returned or the execution completion message identifier.

- [data]: This is the data to be returned. It can be omitted.

[example]: Send command Return message (data)
 [STX] OPL [ETX] → [ACK] [STX] OPL [ETX]

■ When the communication has terminated abnormally

[NACK]
 15h

■ When processing is not possible due to incorrect data or trouble in the VTR

- The receive completion message is returned.

[ACK]
 06h

- An error code is returned.

[STX] E R N₁ N₂ N₃ [ETX]
 02h Error code 03h

4. Error code table

- ER001: Invalid command
- Unsupported command received
 - Error in command execution
- ER002: Parameter error
- ER102: VTR mode error (front loading motor)
- ER103: VTR mode error (loading motor)
- ER104: VTR mode error (drum, capstan system)
- ER105: VTR mode error (reel system)
- ER106: VTR mode error (tension system)
- ER108: VTR dew (condensation) error
- ER1FF: VTR system error

RS-232C Interface

5. Command table

(1) Commands relating to operation control

<Notes>

- Under the "return (completion) message", only the execution messages which are returned after [ACK] is returned when data is received are listed.
- In the case of commands not listed in the table, ER001 (invalid command) is returned after [ACK] has been returned.

VTR operation	Send command	Return (completion) message	Supplementary notes
STOP	[STX] OSP [ETX]	[STX] OSP [ETX]	This command is for stopping the tape travel.
EJECT	[STX] OEJ [ETX]	[STX] OEJ [ETX]	This command is for ejecting the cassette tape. The output picture status differs according to the setup menu item No. 111 (FRZ MODE SEL) setting. For details, refer to the setup menu item.
PLAY	[STX] OPL [ETX]	[STX] OPL [ETX]	This command is for starting playback.
REWIND	[STX] ORW [ETX]	[STX] ORW [ETX]	This command is for rewinding the tape. The maximum tape speed differs according to the setup menu item No. 102 (FF. REW MAX) setting. For details, refer to the setup menu item.
FAST FORWARD	[STX] OFF [ETX]	[STX] OFF [ETX]	This command is for fast forwarding the tape. The maximum tape speed differs according to the setup menu item No. 102 (FF. REW MAX) setting. For details, refer to the setup menu item.
SHTL FORWARD	[STX] OSF:data [ETX]	[STX] OSF [ETX]	This is the forward direction shuttle command. data = n: speed data 0: STILL (STILL) 1: x0.03 (x0.03) 2: x0.1 (x0.1) 3: x0.2 (x0.2) 4: x0.5 (x0.5) 5: x1 (x1) 6: x1.85 (x1.85) 7: x4.1 (x3.1) 8: x9.5*1 (x9.5*1) 9: x16*1 (x16*1) A: x32*1 (x32*1) *1: [This speed differs according to the setup menu item No. 101 (SHTL MAX) setting.] The speeds for the DV format are given in parentheses.

RS-232C Interface

VTR operation	Send command	Return (completion) message	Supplementary notes
SHTL REVERSE	[STX] OSR:data [ETX]	[STX] OSR [ETX]	This is the reverse direction shuttle command. data = n: speed data 0: STILL (STILL) 1: x0.03 (x0.03) 2: x0.1 (x0.1) 3: x0.2 (x0.2) 4: x0.5 (x0.5) 5: x1 (x1) 6: x1.85 (x1.85) 7: x4.1 (x3.1) 8: x9.5*1 (x9.5*1) 9: x16*1 (x16*1) A: x32*1 (x32*1) *1: [This speed differs according to the setup menu item No. 101 (SHTL MAX) setting.] The speeds for the DV format are given in parentheses.
STANDBY OFF	[STX] OBF [ETX]	[STX] OBF [ETX]	This command is for setting the VTR to STANDBY OFF.
STANDBY ON	[STX] OBN [ETX]	[STX] OBN [ETX]	This command is for setting the VTR to STANDBY ON.

RS-232C Interface

(2) Commands related to inquiries

<Notes>

- Under the "return (completion) message", only the execution messages which are returned after [ACK] is returned when data is received are listed.
- In the case of commands not listed in the table, ER001 (invalid command) is returned after [ACK] has been returned.

VTR operation	Send command	Return (completion) message	Supplementary notes
CTL/TC DATA REQUEST	[STX] QCD [ETX]	[STX] CD data [ETX] data = f w gh mm ss ff f = F w = S gh = CTL: g = SP (20h): for a plus display - (20h): for a minus display h = 0-9: hours TC: gh = 00-23: hours mm = 00-59: minutes ss = 00-59: seconds ff = 00-24: frames (625 mode) = 00-29: frames (525 mode)	This command is for inquiring about the counter value. CTL or TC is returned, whichever corresponds to the front display mode.
STATUS REQUEST	[STX] QOP [ETX]	[STX] xxx [ETX] xxx = OEJ: EJECT OFF: FAST FORWARD OPL: PLAY ORW: REWIND OSP: STOP (including STANDBY ON) SRS: PREROLL OBF: STANDBY OFF OSF: SHTL FORWARD OSR: SHTL REVERSE OJG: JOG FORWARD/REVERSE OSW: VAR FORWARD/REVERSE	This command is for inquiring about the VTR's operation mode.
ID (VTR No.) REQUEST	[STX] QID [ETX]	[STX] data [ETX] data = AJ-D940E (625 mode) AJ-D940 (525 mode)	This command is for inquiring about the VTR used.

1. Disassembly Method

1-1. Removal of Top Panel

Loosen 2 screws.

Loosen 2 screws and remove the top panel.

1-2. Removal of Bottom Panel

(1) Loosen the screw 1.

(2) Remove the 4 screws numbered 2.

(3) Slide the bottom panel and remove it.

1-3. Removal of Upper Front Panel

(1) Remove the 4 screws at right and left, then draw the upper front panel.

1-4. Removal of Front Panel

(1) Remove the 4 screws at left and right. Then draw it and remove the connector and remove the Front Panel.

1-5. Removal of Front Loading Unit

(1) Remove the connectors at front loading motor and interconnection board. Then rotate the emergency eject gear (red) counterclockwise until the screw which is used to fix the front loading u can be seen.

Remove 2 connectors.

(2) Remove the 4 screws of the loading unit as shown below.

1-6. Removal of Power Supply Unit

- (1) Remove 5 connectors with the Power Supply unit on the VTR bottom side.
- (2) Remove 2 screws with the Power Supply unit on the VTR bottom side.

- (3) Remove 1 screw with the Power Supply unit on the VTR top side.

- (4) Remove 2 screws at VTR Rear panel which are used to fix the Power supply unit.

1-7. Removal of Mechanism Unit

1. Remove the front loading unit.
2. Remove the connector P1 and P2 which are connected to mech interface at VTR bottom.

Remove the A/C Head cable from the intermediate point, and remove the P5003 and P5002 which are connected between the cylinder unit and Head Buffer board. Then remove the 3 screws and remove the mechanism unit.

1-8. Removal of Fan Motor

1. Remove the Rear Jack by removing 7 screws.

2. Remove 2 screws and Power 2 connector P14 then remove the fan motor.

3. Remove 2 screws and mother board connector P32, then remove fan motor.

2. Maintenance Parts Chart

	Name	Part No.	Hours of Use (unit hours)					
			2,000	4,000	6,000	8,000	10,000	12,000

Symbol	Maintenance	Remark
●	Replacement	
■	Greasing	Wipe the old grease and apply new grease.
△	Cleaning	This mark means cleaning is necessary.
▲	Lubrication	The lubrication is necessary (VFK0906)
◎	Replacement	These parts are included in Mech Chassis Unit.

Note: Hours of Use are based on the head rotation hours.

Hours of Use are recommendation. It may depend on temperature, humidity or dust.

Hours of Use are listed as the reference of maintenance. They do not mean guaranteed hours.

3. Cleaning Procedures

Note: Turns power off during cleaning.

Make sure the power is OFF before cleaning.

Use ethanol (more than 99% purity) as cleaning liquid.

3-1. Cleaning of Head Chips: (Daily)

Clean heads by applying even pressure and rotating cylinder a few times. Never wipe in up and down motion. Never touch a cylinder by naked hand. First wipe with a cloth soaked by cleaning liquid. Then wipe with dry cloth.

3-2. Cleaning of Drum Lead: (Weekly)

Be careful not to touch a head chip. Clean the drum lead with a pick.

3-3. Cleaning of A/C Head: (Weekly)

Wipe the A/C head with a cloth soaked by cleaning liquid. Wipe again with a dry cloth.

3-4. Cleaning of Pinch Roller and Capstan: (Weekly)

Wipe the Pinch Roller and Capstan with a cloth soaked by cleaning liquid.

3-5. Cleaning of Post: (Weekly)

Wind a cloth on a pick. Wipe each post dry with that pick. Wipe again with a dry cloth. For metal posts wipe with cleaning liquid. Then wipe dry again.

Note: Use the clean cloth for cleaning purpose. Do not use any dirty cloth.

2014-2015

[illegible]

1. Mechanism Adjustment

1-1. Name of tape transportation

1-2. Pinch Solenoid Position Adjustment

Specification	T = 0.3mm
Test Point	Space at T portion
Adjustment	A, B
Mode	EJECT (Power Off)
Tool	VFK0357 (Eccentric Driver)

1. Turns power off.
2. Close the pinch roller to the capstan shaft.
3. Press the pinch solenoid by your hand and touch the pinch roller with the capstan shaft.
4. Loosen the 2 screws A and adjust B portion so that the Gap T is in the specification by VFK0357.
5. Tighten the 2 screws A after adjustment.

1-3. Main Brake Torque Confirmation

Specification	A: more than 80g B: more than 15g
Test Point	S Reel, T Reel
Mode	EJECT (Power OFF)
Tool	VFK71(150g), VFK1191(45g), VFK1152

1. Remove the cassette compartment.
2. Attach the Adaptor (VKK1152) with the torque meter.
3. Attach the torque meter with the S Reel table and rotate it to A direction (CW).
4. Confirm the reel torque is in the specification when the brake is released and the reel starts rotation.
5. Confirm T Reel torque in the same way with S Reel torque.
6. Remove the Adaptor (VKK1152) and attach the adaptor with the torque meter (VFK1191).
7. Attach the torque meter with the S Reel table and rotate it to B direction (CCW).
8. Confirm the reel torque is in the specification when the brake is released and the reel starts rotation.
9. Confirm T Reel torque in the same way with S Reel torque.

1-4. Post Height Pre-Adjustment

Mode EJECT (Power OFF)

Tool VFK1153, VFK1154 (flange tool)

1. Insert M cassette tape, and eject the tape.
2. Turns power off and remove the cassette compartment and set mechanism plate (VFK153).
3. Place the flange tool (VFK1154) as shown in the figure and adjust the post height.
4. Adjust the S4 and T5 post height by VFK1149 and adjust T3 and T4 by VFK1151.

Name	Limit	Post Driver
S5 Post	Note 1	VFK1149
S4 Post	Note 1	VFK1149
T3 Post	Lower Limit	VFK1151(2.5mm Nut Box)
T4 Post	Lower Limit	VFK1151 (2.5mm Nut Box)

Note 1: Rotate CCW one turn from the lower limit.

Plastic parts
Set mechanism plate with thinner tape detection switch pushing

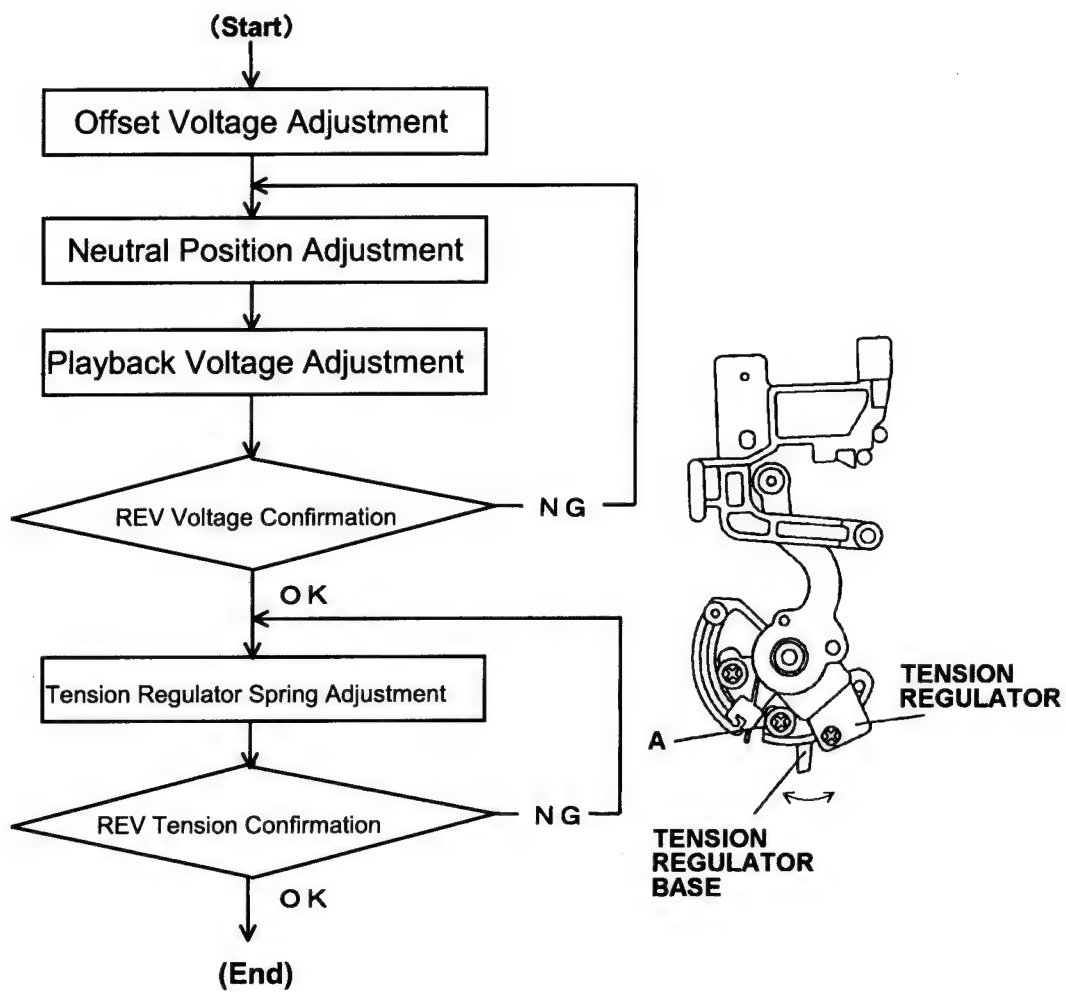

Lower Limit

Upper Limit

1-5. Tension Arm Adjustment Procedures

1-6.Tension Arm Offset Voltage Adjustment

Board	SERVO
Specification	$2.5 \pm 0.05V$
Test Point	TP201(SERVO:F1)
Adjustment	VR1(Mech. IF)
Mode	EJECT
M. EQ.	Digital Volt Meter

1. Set the VTR in EJECT mode and confirm the voltage at TP201 is in the specification.
2. If it is not, adjust VR1 on the Mech. I/F Board so that the voltage is in the specification.

S Brake Solenoid Side View

1-7. Neutral Position Adjustment

Board	SERVO
Specification	$2.5 \pm 0.1V$
Test Point	TP201(SERVO:F1)
Adjustment	Tension Regulator Board Base Position
Mode	STOP
M. EQ.	Digital Volt Meter VFK1208(Black, with a hole)

1. Remove 4 screws on the Front Loading Unit and Remove it, then set the VFK1208 (Black , with a hole).
2. To set the VTR in no tape loading mode, set the DIP SW1 at the rear panel ON to open the service menu. Then select "T REEL TRQ" and press JOG/SHTL key. During adjustment JOG/SHTL key must be hold. Do not touch the Magnetised screw driver to the Reel FG magnet.
3. Adjust the Tension Regulator Board Base Position so that the voltage at TP201 is in the specification in STOP mode. To adjust the Tension Regulator Board Base Position, loosen the screw A and move the knob D portion by a screw driver without magnetization and tighten the screw A.

Adjust A and D at the same time.

1-8. Tension Arm PLAY & REV Voltage Confirmation and Adjustment

Board	SERVO
Specification	(PLAY) $3.8 \pm 0.05V$ (REV) $1.2 \pm 0.3V$
Test Point	TP201(SERVO:F1)
Adjustment	VR2
Mode	STOP
M. EQ.	Digital Volt Meter. VFK1156(Black: PLAY) VFK1155(White: REV)

1. Remove 4 Screws on the Front Loading Unit and Remove it, then set the VFK1156 (Black).
2. To set the VTR in no tape loading mode, set the DIP SW1 on the rear of the front panel to ON to open the service menu. Then select "T REEL TRQ" and press JOG/SHTL key. During adjustment JOG/SHTL key must be hold. Do not touch the Magnetised screw driver to the Reel FG magnet.
3. Confirm the voltage at TP201 is in the specification.
4. If it is not, adjust VR2(Mech. I/F) so that the voltage is in the specification.
5. Then set VFK1155.
6. If it is not, adjust "Tension Arm Neutral Position Adjustment" again.
If it is out of specification after this adjustment, replace the tension post unit.

S Brake Solenoid Side View

1-9. Tension Regulator Spring Adjustment

Board	SERVO
Specification	$11 \pm 1\text{gf}$
Test Point	TP201(SERVO:F1)
Adjustment	Tension Regulator Spring Hook (B)
Mode	STOP
M. EQ.	Digital Volt Meter. VFK1188(30g Dial Tension Meter)

1. Set the VTR in no tape loading.
2. Press the tension post by the Dial Tension Meter to R direction.
3. Read the Dial Tension Meter when the voltage is 3.8 V (PLAY position) at TP201, and adjust the Tension Regulator Spring Hook (B).
4. To adjust the Tension Regulator Spring Hook (B) position, loosen the Tension Regulator Spring position and after adjustment tighten the screw C.

1-10. REV Tension Confirmation

Board	SERVO
Specification	$18 \pm 2\text{gf}$
Test Point	TP201
Mode	STOP
M. EQ.	Digital Volt meter VFK1188(30g Dial Tension Gauge)

1. Place the VTR into no tape loading.
2. Press the tension post by the Dial Tension Meter to R direction in STOP mode.
3. Read the Dial Tension Meter when the voltage is 1.2 V (REV position) at TP201, and adjust the Tension Regulator Adjustment again.
4. Grew the screw A, B and C after Tension Arm adjustment. The grew quantity at B is half of A and C.

1-11. Tension Confirmation

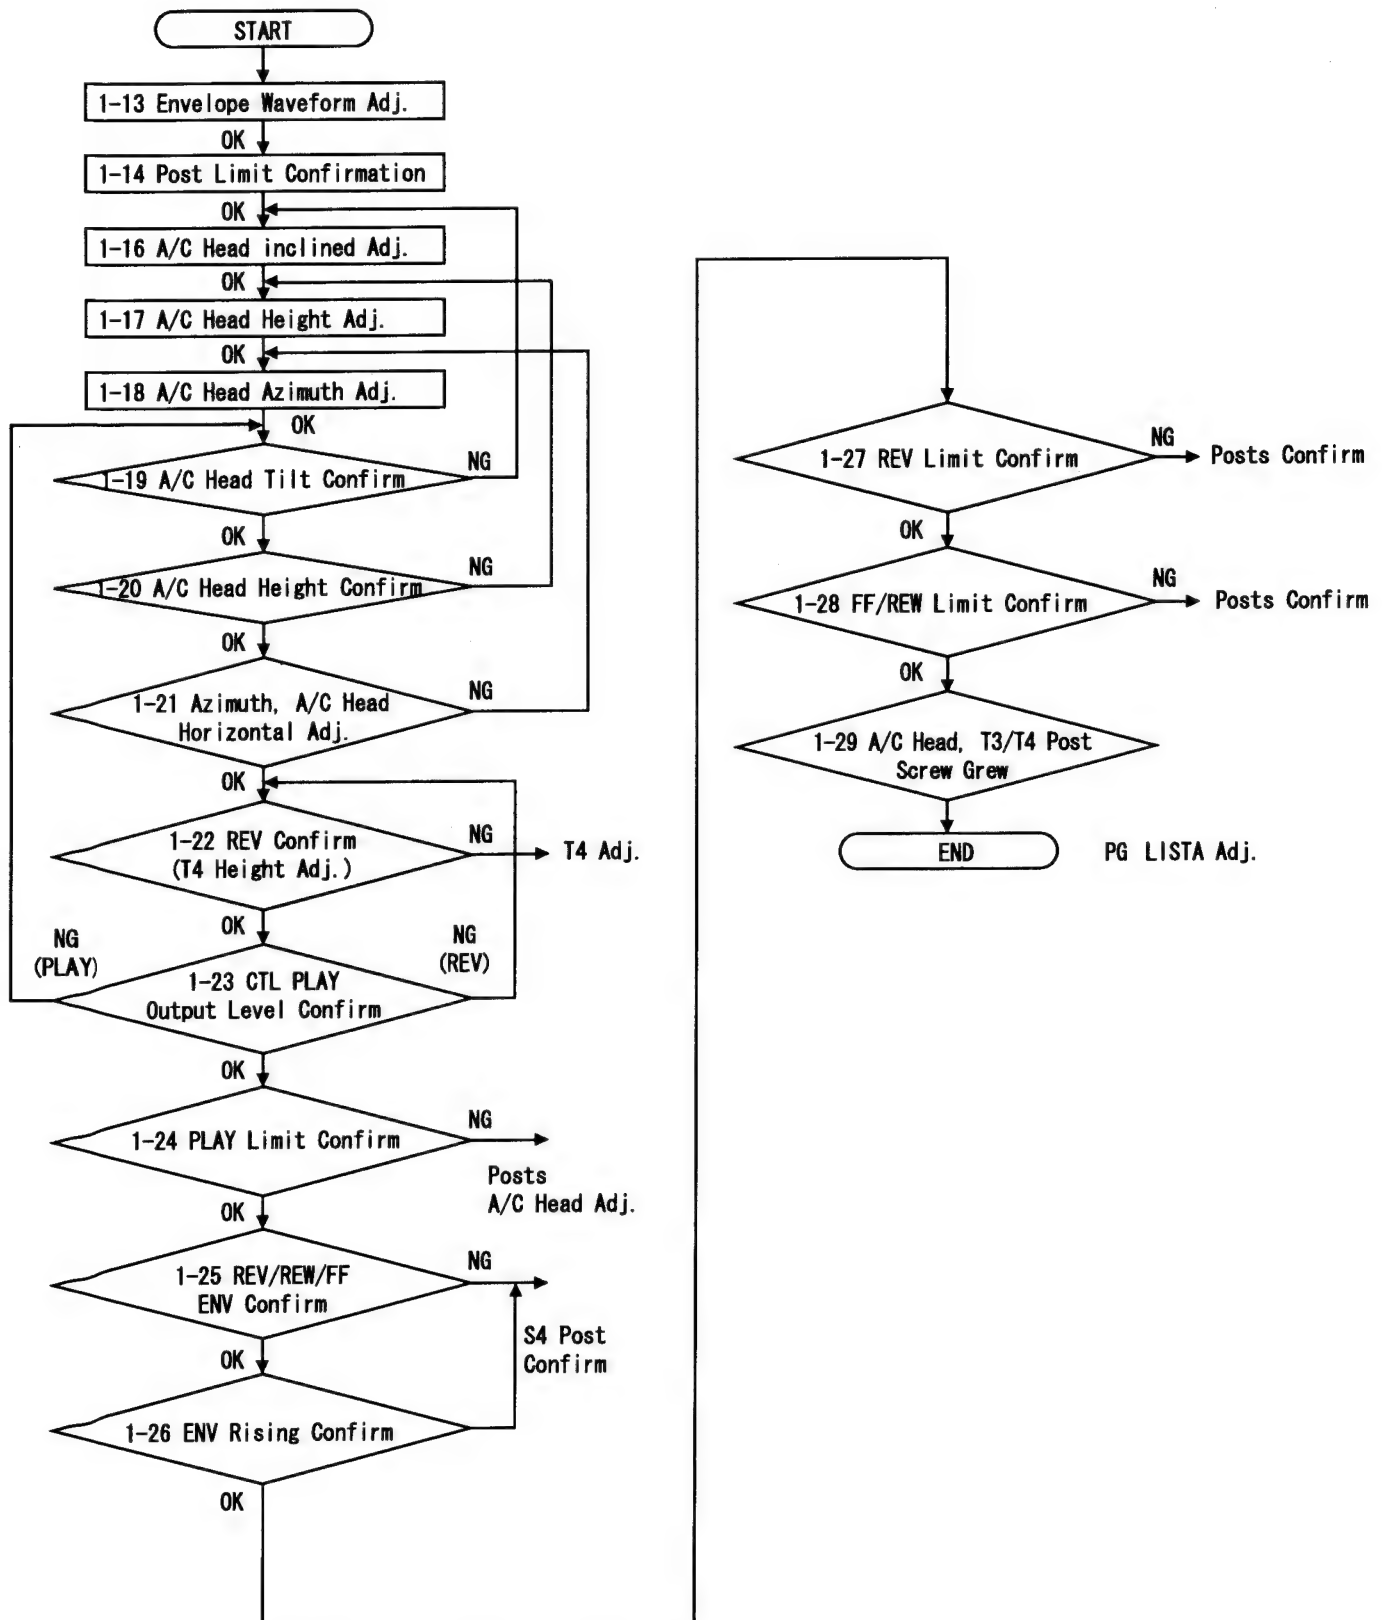

Specification	(PLAY) $6.0 \pm 1\text{gf}$ (REV) $9.0 \pm 2\text{gf}$
Mode	PLAY, REV $\times 1$
Tape	Beginning of 63min.M Cassette
Tool	VFK1145(Tension Meter)

1. Playback the beginning of 63min. M cassette.
2. Set a tension meter between S3 and S4 post.
3. Confirm the tension is in the specification.
4. Set the VTR is in REV mode.
5. Set the tension meter between S4 and S5 posts.
6. Confirm the tension is in the specification.

Do not damage a tape during measurement.

1-12. Tape Pass Adjustment Procedures

1-13. ENV waveform Adjustment

Specification	$V1/V_{max}, V2/V_{max}, V3/V_{max} \geq 0.8$
Test Point	TP722(F1) for Trigger TP201 R/P ENV L:H3/ R:H4
Adjustment	S1, T1PostHeight
Mode	PLAY(ATF)
Tape	VFM3580KM(No.1)
M. EQ.	Oscilloscope
Tool	VFK1149(Post Driver)

1. Playback the color bar portion of the alignment tape.
2. Adjust S1 and T1 post height so that the R/P envelope output is in the specification.
3. When the S1 and T1 posts are adjusted, first raise the post height and make small the entrance and exit side of the envelope, then down the post until envelope becomes flat.
4. Adjust T1 post and makes exit side of the envelope flat then adjust S1 post.
5. After the adjustment, unload the tape then loading the tape. Confirm the waveform style.

1-14. Post Limit Confirmation (Play)

Specification	No curl at the Tape edge All Post Limit
Mode	PLAY
Tape	Signal recorded Tape
Tool	VFK1149(Post Driver) VFK1151(Nut Driver)

1. Confirm the each Post Limit is as shown in figure, if it is not adjust the post height.
2. Confirm that there is no tape problem as D, E, F in the figure.

Post	Limit	Adjustment
S5	Free or Lower Limit	S5 Post Height
S4	Lower Limit	S4 Post Height
S1	Upper Limit	Linearity Coarse
T1	Upper Limit	Linearity Coarse
T3	Lower Limit	T3 Post Height
T4	Free or Lower Limit	T4 Post Height

A Upper

B Free

C Lower

D Curl

E Bend

F Drop

1-15. A/C Head ADJUSTMENT Method (summary)

Item	Screw	Adjustment	Torque
Tilt Adjustment	A	CW --- Decrease CUE Level CCW --- Increase CUE Level	(Adjustment)
Height Adjustment	B	CW --- If the level is increased at "k". CCW --- If the level is increased at "j".	(Adjustment)
Azimuth Adjustment	F	Adjust phase by the screw F.	(Adjustment)
A/C Head Horizontal Position Adj.	C D	Adjust A/C Head Horizontal Position by VFK0357 (Eccentric Driver) at long hole E, then tighten the screw C and D.	2.5 Kgf · cm
Tilt	G	Adjust by tightening the screw except tilt and azimuth adjustment.	1.0 Kgf · cm
Height Fix	H	After the Height Adjustment, tighten screw H to fix the A/C Head Height.	

Screw	Tool
A	VFK1178 (0.89 mm Nut Driver)
B	VFK1150 (5.5 mm Nut Driver)
F	VFK1148 (1.5 mm Nut Driver)
C, D, G	VFK1209 (Torque Driver) VFK0912 (1.5 mm Hex Driver Bit)
H	VFK1190 (1.5 mm L type Hex Wrench)

1. Each Adjustment must be done keeping the screw G tighten.
2. When tilt is adjusted, confirm the screw A is tighten. (A/C Head must be touch with the fix plate.)
3. When tilt is adjusted confirm that there is no tape damage at T3 Post.
4. When Height is Adjusted, loosen the screw H. After the adjustment tighten screw H.
5. When the each Adjustment is done, each adjustment screw must be rotated CW.

And hit slightly the L part to remove the mechanical distortion.

6. Adjust or confirm alternately each Adjustment and Envelope Output waveform Adjustment

A/C HEAD HEIGHT

1-16. A/C Head Tilt Adjustment

Specification	No curling and bending at tape edge. T3 Post Lower Limit
Adjustment	Screw A, G (A/C Head)
Mode	PLAY
Tape	Signal recorded Tape
Tool	VFK1148, VFK1178 (Hex Wrench)

1. Adjust A/C Head Tilt by screw A so that the Tape is at lower limit at T3 Post.
2. For this Adjustment, loosen screw G and make tape curling at T3 lower flange then gradually tighten screw G to make the tape flat. The screw G tightening torque is 1.0 Kgf · cm.

(Reference)

1. Screw A CW: Tape up
Screw A CCW: Tape down
2. It is necessary to tighten the each adjustment screw when the adjustment is completed.
3. Confirm and adjust alternately this adjustment and A/C Head each adjustment (Azimuth and Height).

1-17. A/C Head Height Adjustment

Board	SERVO
Specification	CTL Max (C1,C2=1.8V or more)
Test Point	TP30(SERVO:F1)
Adjustment	Screw B, H (A/C Head)
Mode	PLAY
Tape	VFM3580KM (No.1)
M. EQ.	Oscilloscope
Tool	VFK1150(Nut Driver) VFK1190(Hex Wrench)

1. Connect a scope to TP30 on Servo (F1) board to observe CTL level.
2. Confirm that CTL level is decreased when A/C head is up and down at the point shown in the figure. If the CTL level is increased adjust nut B so that the CTL level is max.
3. Tighten screw H with 2.0 Kgf · cm torque then confirm the CTL level again.

(Reference)

1. Confirm and adjust alternately this adjustment and A/C Head each adjustment (Azimuth and Height).

A/C HEAD HEIGHT

1-18. A/C Head Azimuth Adjustment

Board	SERVO
Specification	C1, C2 : Max
Test Point	TP30 (SERVO:F1)
Adjustment	Screw F (A/C Head)
Mode	PLAY
Tape	VFM3580KM (No.1)
M. EQ.	Oscilloscope
Tool	VFK1148 (Hex Wrench) VFK1209 (Torque Driver)

1. Connect a scope to TP30 on Servo (F1) board. Then adjust A/C Head Azimuth by the screw F so that the CTL level is max.
2. For this Adjustment, loosen screw G and adjust screw F then tighten screw G with 1.0Kgf · cm torque.

(Reference)

Confirm and adjust alternately this adjustment and A/C Head each adjustment (Azimuth and Height).

1-19. A/C Head Tilt Confirmation

Specification	A/Amax = 0.8 or more
Test Point	TP101 (CUE:H1)
Adjustment	Screw A, G (A/C Head)
Mode	PLAY
Tape	VFM3580KM (No.1)
M. EQ.	Oscilloscope
Tool	VFK1178, VFK1148 (Hex Wrench) VFK1209 (Torque Driver)

1. Playback the alignment tape CUE audio 6 kHz portion.
2. Confirm that screw G and H are tighten.
3. Connect a scope to TP101 and move the tension arm to B direction until T2 post is not moved, then confirm the output level variation is in the specification.
4. If it is not loosen screw G and adjust screw A then tighten screw G with 1.0 Kgf · cm torque.
5. It is necessary to complete the adjustment with screw A tighten and confirm that screw A is not loosen.
6. If this is adjusted confirm the Play Limit Confirmation (PLAY).

1-20. A/C Head Height Confirmation

Specification	A=0.95 X Amax or more C1, C2 = 1.8V or more
Test Point	TP101 CUE AUDIO(CUE:H1) TP30 CTL(SERVO:F1)
Adjustment	Screw B, H (A/C Head)
Mode	PLAY
Tape	VFM3580KM (No.1)
M. EQ.	Oscilloscope
Tool	VFK1150, VFK1190(Hex Wrench)

1. Playback the alignment tape CUE audio 6 kHz portion.
2. Connect a scope to TP101 and raise the A/C head or push down it to confirm the CTL level is not increased.
3. If it is increased, slightly adjust the "A/C Head Height Adjustment" and confirm the CTL level is correct.
4. If A/C Head Height is changed the azimuth is changed also. Therefore A/C Head azimuth must be adjusted and confirm alternately.
5. When A/C Head Height is fixed, tilt is changed by tightening screw H and the height is changed. Therefore Height confirmation must be done after tightening screw H.

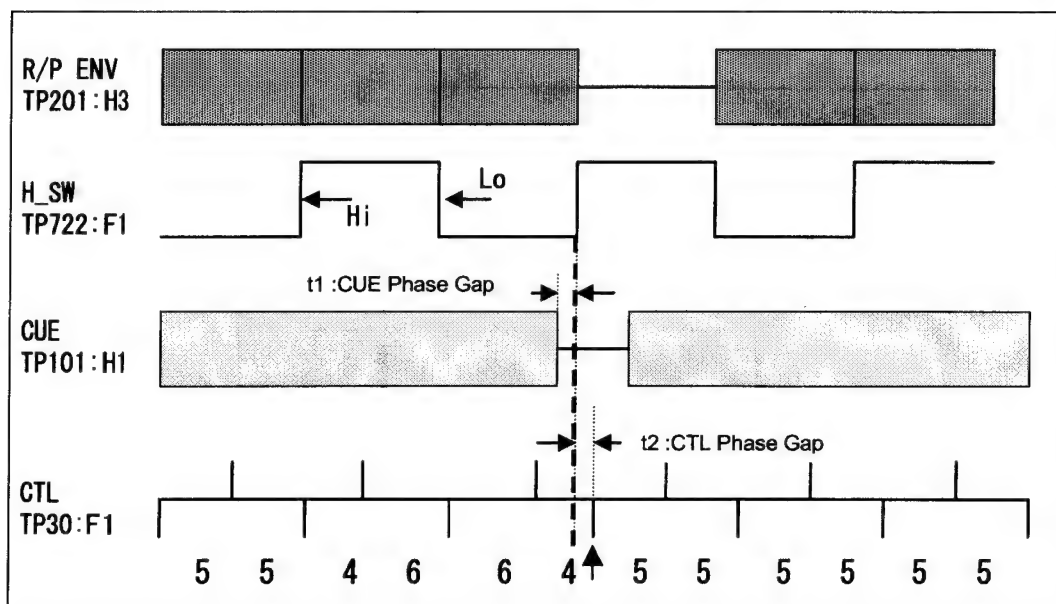

A/C HEAD HEIGHT

1-21. A/C Head Azimuth and Horizontal Position Adjustment

Specification	25M Mode $-250\mu s \leq t_1, t_2 \leq +250\mu s$ 50M Mode $-125\mu s \leq t_1, t_2 \leq +125\mu s$	Test Point	TP201 R/P ENV L(RFEQ:H3) TP722 R/P HSW (SERVO:F1) TP101 CUE AUDIO (CUE:H1) TP30 CTL (SERVO:F1)
Adjustment	A/C Head	M. EQ.	Oscilloscope
Mode	Playback	Tool	VFK0357(Eccentric Driver)
Tape	VFM3582KM (A/C Head H. Position)		

1. Set the VTR in 25M Mode and playback an Alignment Tape (A/C Head H. Position).
2. Adjust Azimuth so that the CTL and CUE drop portion is match (Refer to Azimuth Adjustment).
3. Connect a scope CH1 to TP201 on H3 board and CH2 to TP722 on F1 board. Then find the R/P ENV lack portion, and remember the H_SW is High or Low at the portion. (H_SW High or Low is changed at each tape loading.)
4. Adjust A/C Head Horizontal Position so that the memorized H_SW and CTL trigger at the frame start is matched. The frame start CTL is located at the falling edge between 6:4 and 5:5 portion. To adjust the Horizontal position loosen screw C and D then adjust horizontal position by eccentric driver at hole E.
5. After adjustment, tighten the screws with 2.5kgf · cm torque and hit gently at L portion to remove the mechanical distortion. Confirm the above specification.
6. Set VTR into 50M PB Mode, and confirm the timing is in the specification. If it is not adjust this item again.

1-22. REV Confirmation and Adjustment (T4HeightAdjustment)

Specification	$C1, C2 \geq Cp1, Cp2 \times 0.75$ Lower Limit at T3Post in REV	Tape	VFM3580KM (No.1)
Test Point	TP30 (SERVO:F1)	M. EQ.	Oscilloscope
Adjustment	T4 Post Height	Tool	Nut Driver
Mode	REV X 1		

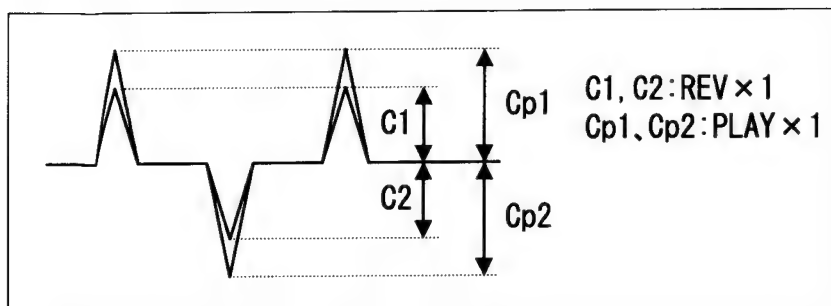

1. Run the Tape in REV x -1 mode, and confirm that the above specification is satisfied. If it is not, adjust the following items.
2. Rotate the T4 nut 45 degrees each and confirm the specification and repeat this adjustment until the specification is satisfied.
3. Specification: CTL level in REV x -1 speed is more than 75 % of Playback CTL level.
Tape runs in lower limit at T3 Post, and tape has no curling and bending at T3, T4 upper and lower limit.
4. If the Specification is not satisfied, use height adjustment tool.

T4 Nut Adjustment Direction

T4 Nut Adjustment Direction	REV CTL Output	REV T3 Post Lower Limit
CW	Increase	More
CCW	Decrease	Less

Post Limit

Post	Tape Limit					
	A	B	C	D	E	F
T3Post	NG	NG	OK	NG	NG	NG
T4Post	OK	OK	OK	NG	NG	NG

1-23. CTL PLAY Output Level Confirmation

Specification	Refer to Figure
Test Point	TP30 (SERVO:F1)
Mode	PLAY
Tape	VFM3580KM(No.1)
M. EQ.	Oscilloscope

A/C Head must be fixed.

1. Set the VTR to 25M Mode, and playback an Alignment Tape. Then observe the CTL.
2. The CTL level is in the specifications in the following table.

CTL Output Level C1,C2

PLAY	REV × 1	REV × 0.2
$C1, C2 \geq 1.8V$	$C1, C2 \geq 1.4V$	$C1, C2 \geq 1.2V$

1. If the PLAY Output Level is NG. Then confirm the A/C Head Height.
2. If the REV Output Level is NG. Then confirm the T4 Post Height.

1-24. PLAY Mode Limit Confirmation

Specification	Confirm the each Post Limit is in the following table.
Mode	PLAY
Tape	M Cassette (MP Tape) Tape begin / Tape end

Post	Tape Limit (Refer to Figure)						Adjustment Point	
	A	B	C	D	E	F		
S5 Post	NG	OK	OK	NG	NG	NG	S4, S5Post	Post Height Pre-Adj.
(S4) Tension Post	NG	NG	OK	NG	NG	NG		
S1 Post	OK	NG	NG	NG	NG	NG	S1Post	Envelope waveform Adj.
T1 Post	OK	NG	NG	NG	NG	NG	T1Post	Envelope waveform Adj.
T3 Post	NG	NG	OK	NG	NG	NG	A/C Head Tilt	A/C Head Tilt Adj.
T4 Post	NG	OK	OK	NG	NG	NG	T4 Post	Post Height Pre-Adj.

1. Playback a Tape, and confirm the tape limit at each post is as shown in the above table.
2. If it is not adjust each item according with the Adjustment Point in the above table.

1-25. REV/REW/FF Envelope Confirmation

Specification	Refer to Figure
Test Point	TP201 ENV (RFEQ:H3)
Mode	REV, REW, FF
Tape	VFM3580KM (No.1)
M. EQ.	Oscilloscope

1. Place the VTR in REV, REW, FF and confirm that the Waveform is the same diamond style.
2. Peak level V is always in the following specification.

$$V/V_{max} \geq 0.9$$
3. If it is not confirm the S4 Post Height.

OK

NG

1-26. Envelope Confirmation

Test Point	TP201 ENV (RFEQ:H3)
Mode	REW/REV to PLAY Loading completion to PLAY FF to PLAY
Tape	L cassette (123 min pre-recorded) Tape begin
M. EQ.	Oscilloscope

This Adjustment must be done after "Envelope waveform Adjustment".

1. Confirm that the envelope waveform becomes stable immediately in the following transition mode, REW to PLAY, REV to PLAY, FF to PLAY, Loading completion to PLAY.
2. If it is not, confirm S4 Post Height.

OK

NG

1-27. REV Limit Confirmation

Specification	Confirm the Post Limit is as shown in the following table.
Mode	REV
Work Tape	M Cassette (MP Tape) Tape begin and Tape end

Post	Tape Limit (Refer to Figure)					
	A	B	C	D	E	F
S5 Post	OK	OK	OK	NG	NG	NG
Tension Post	NG	OK	OK	NG	NG	NG
S1 Post	OK	NG	NG	NG	NG	NG
T1 Post	OK	OK	OK	NG	NG	NG
T3 Post	NG	NG	OK	NG	NG	NG
T4 Post	NG	NG	OK	NG	NG	NG

1. Run a tape in Reverse mode and confirm that the tape limit is as shown in the above table.
2. This confirmation is done after each adjustment.

1-28. FF, REW Limit Confirmation

Specification	Confirm the Post Limit is as shown in the following table.
Mode	FF, REW
Work Tape	M Cassette (MP Tape) Tape begin and Tape end

Post	Tape Limit (Refer to Figure)					
	A	B	C	D	E	F
S5 Post	OK	OK	OK	NG	NG	NG
Tension Post	NG	OK	OK	NG	NG	NG
S1 Post	OK	NG	NG	NG	NG	NG
T1 Post	OK	OK	OK	NG	NG	NG
T3 Post	OK	OK	OK	NG	NG	NG
T4 Post	OK	OK	OK	NG	NG	NG

1. Run a tape in FF, REW mode and confirm that the tape limit is as shown in the above table.
2. This confirmation is done after each adjustment.

1-29. A/C Head and T3, T4 Post Screw Grew

[A/C Head Screw Grew]

	Screw A	Other Screw
Grew amount	About 3 mm	About 5 mm

1. Grew after A/C Head Adjustment.
2. Remove the screw grew before Adjustment.

[T3 Post, T4 Post Grew]

	T3 Post	T4 Post
Grew amount	About 3 mm	About 5 mm

1. After A/C Head Adjustment, grew the Plastic Nut part of T3 and T4 posts.
2. Remove the screw grew before Adjustment.

1-30. LISTA

LISTA Process

1-31. LISTA Connection and Start

Test Point	TP732 ATF ERR (SERVO:F1) TP722 R/P HSW (SERVO:F1) TP723 PB HSW (SERVO:F1) TG510 GND (SERVO:F1)
M. EQ.	PC (AD Board must be installed.), Oscilloscope
Tape	VFM3580KM (ENV LEVEL), VFM3581KM (LISTA)
Tool	VFK1481 (LISTA Software), VFK1186(LISTA Cable)

1. Connect the LISTA cable with the A/D board in the PC.

2. Connect the LISTA clips to the following Test Points.

(1) ATF:TP732 (F1)

(2) HSW:TP722(RP HSW) or TP723(PB HSW)

(3) GND:TG510

3. Run the LISTA software.

Installation and Operation

Make a directory like C:LISTA and copy the all files in the floppy disk of VFK1481.

Type Lista.exe in the DOS mode to run the LISTA software.

4. Select the model of AJ-D940 in the menu.

5. Select a alignment tape to use LISTA Adjustment. If it is not displayed choose one of the listed tape and type Y (Y)es or (N)o and resist the data which is supplied with the alignment tape.

1-32. Alignment Tape Data Registration

1. Select <4> Alignment Tape in the LISTA software main menu.
 2. Select <2> ENTRY in the Alignment Tape Menu.
 3. When << Alignment tape Data Entry >> is displayed, input the tape serial number according with the menu instruction. The serial number is stumped on the alignment tape. Then select the PAL or NTSC. Type 0 or ENTER to choose DVCPRO.
 4. Then input the all data (37 items for NTSC) and check sum. IF the data is incorrect registration is not completed so check and input again.
- After data registration select <1> SELECT.

1-33. RP Head Sensitivity Adjustment (25M Mode)

Specification	Sensitivity 150 ± 15 (mV/um)
Mode	Playback
Test Point	(1) ATF:TP732 (2) HSW:TP722(RP HSW) (not TP723(PB HSW) (3) GND:TG510
Adjustment	SERVO Adjustment Menu:"A09 RP GAIN P"
Tape	VFM3581KM or VFM3581KL

Before this Adjustment adjust RFEQ (H3/H4) ENV Level Adjustment(L/R).

Set the LISTA software in 25M Mode. Select AJ-D950 in the PC menu and displays the main menu. 25M and 50m mode can be changed by "0" key.

1. Set the VTR in Service Mode to open the service menu and select the item of "A09 RP GAIN DP" in the "SERVO ADJUST" menu.
2. Playback a LISTA alignment tape (VFM3581KM).
3. Select the LISTA (6) ATF Error Signal Monitor and "1.2% Speed..." and type Enter to start the software.
4. When the picture is appeared as shown in figure adjust ATF Gain so that the "Sens. Value:" is in the Specification.
To return the main menu press ESC key.

1-34. RP Head Sensitivity Detection (25M Mode)

Specification	Sensitivity 150 ± 15 (mV/ μ m)
Mode	Playback
Test Point	(1) ATF:TP732 (2) HSW:TP722(RP HSW) (not TP723(PB HSW) (3) GND:TG510
Adjustment	SERVO Adjustment Menu: "A09 RP GAIN DP"
Tape	VFM3581KM or VFM3581KL

Before this adjustment RP Head Sensitivity Adjustment (25M Mode) must be completed.

1. Select "A09 RP GAIN DP" in the Service Menu.
2. Playback a LISTA Alignment Tape (VFM3581KM).
3. Select LISTA Main Menu "(1) Sensitivity Measurement" Press enter when "1.2% Speed..." is appeared to start the Sensitivity measurement.
4. Confirm that the specification is satisfied when << Sensitivity Measurement Finish>> and "Sensitivity = sensitivity value" are appeared.

1-35. LISTA Linearity Adjustment and Waving Measurement (25M Mode)

Specification	Linearity is less than 3 μ m, Waving is less than 1.5 μ m.
Mode	SERVO Adjustment Menu:"A10 RP LINEAR DP"
Test Point	(1) ATF:TP732 (2) HSW:TP722(RP HSW) (not TP723(PB HSW) (3) GND:TG510
Adjustment	S1 and T1 Post Height
Tape	VFM3581KM or VFM3581KL

1. Open the Service Menu and select "A10 RP LINEAR DP" in the "SERVO ADJUST"
2. Playback a LISTA alignment Tape (VFM3581KM).
3. Select "(2) Linearity Measurement" then Linearity waveform is appeared.
4. When the following waveform is appeared press "BS" (Back Space) key to centering the waveform. Adjust S1 and T1 Post Height so that the Linearity waveform is flat. Confirm the ENV waveform is flat.
Red dot lines shows the specification, so linearity waveform should be in the lines.

Points

- (1) The left of linearity (Entrance) is changed by S1 Post Height and right of linearity (Exit) is changed by T1 Post Height.
- (2) Lower of the monitor is changed by the lead of the cylinder.
- (3) When the Post Driver is released from the Post linearity may be changed.
- (4) After Adjustment is completed, EJECT the tape end load it again and confirm the waveform is not changed.

5. After the Linearity Adjustment measure the waving.

Waving Measurement

1. While the linearity is displayed on the monitor press "SPACE" key to hold the Peak (30 seconds).
2. Press "SHIFT" and "]" keys together and "Waving" value is displayed at left bottom of the monitor. Then confirm the waving is 1.5 μm or less, and the waving is constant from the entrance to exit. If the waving is out of specification adjust S1 (Entrance) and T1 (Exit) Post Height.
3. After measurement press ESC key to return the main menu.

1-36. PB Head LISTA Sensitivity Adjustment (25M Mode)

Specification	Sensitivity 150 ± 15 (mV/um)
Mode	SERVO Adjustment Menu "A11 PB GAIN DP"
Test Point	(1) ATF:TP732 (2) HSW:TP723(PB HSW) (not TP722(RP HSW) (3) GND:TG510
Adjustment	SERVO Adjustment Menu: "A11 PB GAIN DP"
Tape	VFM3581KM or VFM3581KL

1. Open the Service Menu and select "A11 PB GAIN DP" in the "SERVO ADJUST" menu.
2. Playback a LISTA alignment Tape (VFM3581KM).
3. Select LISTA Main Menu "(6) ATF Error Signal Monitor" Press enter when "1.2% Speed..." is appeared to start the Sensitivity measurement.
4. When the picture is appeared as shown in figure adjust ATF Gain so that the "Sens. Value:" is in the Specification.
5. After Adjustment press ESC key to return the main menu.

1-37. PB Head Sensitivity Detection (25M Mode)

Specification	Sensitivity 150 ± 15 (mV/ μ m)
Mode	Playback
Test Point	(1) ATF:TP732 (2) HSW:TP723(PB HSW) (not TP722(RP HSW) (3) GND:TG510
Adjustment	SERVO Adjustment Menu:"A09 RP GAIN P"
Tape	VFM3581KM or VFM3581KL

Before this adjustment PB Head Sensitivity Adjustment (25M Mode) must be completed.

1. Open the Service Menu and select "A11 PB GAIN DP".
2. Playback a LISTA alignment tape (VFM3581KM).
3. Select LISTA Main Menu "(1) Sensitivity Measurement" Press enter when "1.2% Speed..." is appeared to start the Sensitivity measurement.
4. Confirm that the specification is satisfied when << Sensitivity Measurement Finish>> and "Sensitivity = sensitivity value" are appeared.

1-38. LISTA Consumer DV Compatibility Playback Confirmation

Specification	Sensitivity 130 ± 30 (mV/um)
Mode	Servo Adjustment Menu: "A08 RP GAIN"
Test Point	TP321: ATF Error (Servo Board: F1) TP233: HSW_R/P (Servo Board: F1) TP510: GND (Servo Board: F1)
Adjustment	LISTA Set
Tape	VFM3000EDS (LISTA Master Tape for consumer DV)

1. Select "A08 RP GAIN" of the Servo Adjustment menu.
2. Select "(4) LISTA Alignment Tape" of LISTA menu and Select the "NTSC or PAL" number of DV tape number which is used for adjustment.

Note: The Alignment tape (VFM3000EDS) is common use NTSC and PAL.

Please be careful select the "NTSC" or "PAL" on the above menu, which is follow the VTR.

3. Playback the consumer DV LISTA master Tape.
4. Select the "(6) ATF Error Signal Monitor" and display the sensitivity data.
5. When the sensitivity data is displayed, adjust ATF Gain so that the sensitivity value at the upper-left on the monitor is in the specification.
6. ATF Gain is adjusted by rotating the JOG Dial while pressing the JOG/SHTL key.
7. After completion of adjustment, press ESC key to return menu and select (1) sensitivity Measurement.
8. Confirm the sensitivity value is in the specification.

1-39. RP Head Sensitivity Adjustment (50M Mode)

Specification	Sensitivity 150 ± 15 (mV/um)
Mode	Playback
Test Point	(1) ATF:TP732 (2) HSW:TP722(RP HSW) (not TP723(PB HSW) (3) GND:TG510
Adjustment	SERVO Adjustment Menu:"A05 RP GAIN ED"
Tape	VFM3581KM or VFM3581KL

1. Set the LISTA software in 50M Mode. Select AJ-D950 in the PC menu and displays the main menu. 25M and 50m mode can be changed by "0" key.
2. Open the SET-UP Menu and set #012: 422 #013: MANUAL.
3. Set the VTR in Service Mode to open the service menu and select the item of "A05 RP GAIN ED" in the "SERVO ADJUST" menu.
4. Playback a LISTA alignment tape (VFM3581KM).
5. Select the LISTA (6) ATF Error Signal Monitor and "1.2% Speed..." and type Enter to start the software.
6. When the picture is appeared as shown in figure adjust ATF Gain so that the "Sens. Value:" is in the Specification.
To return the main menu press ESC key.

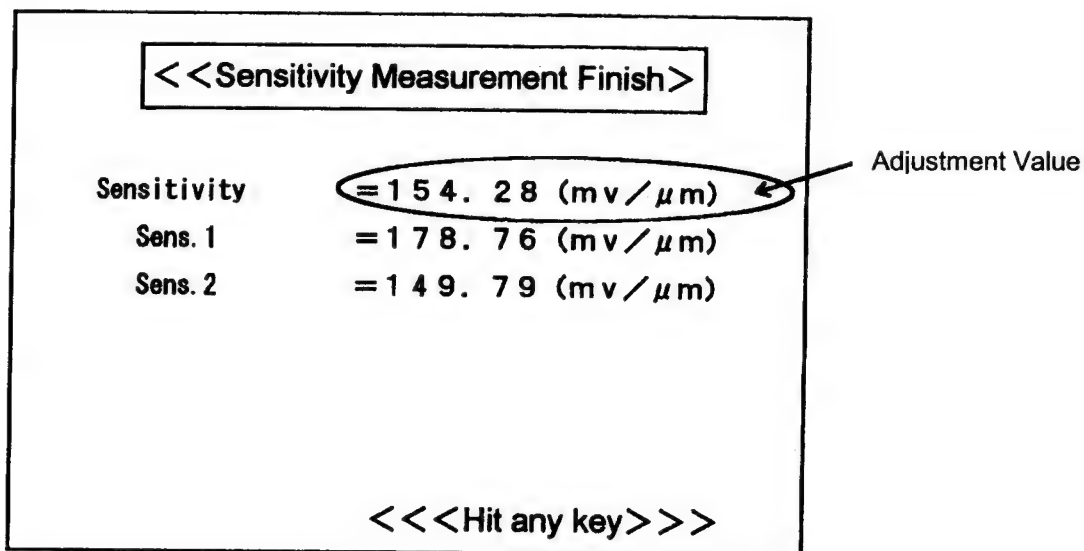

1-40. RP Head Sensitivity Detection (50M Mode)

Specification	Sensitivity 150 ± 15 (mV/ μ m)
Mode	Playback
Test Point	(1) ATF:TP732 (2) HSW:TP722(RP HSW) (not TP723(PB HSW) (3) GND:TG510
Adjustment	SERVO Adjustment Menu: "A05 RP GAIN ED"
Tape	VFM3581KM or VFM3581KL

Before this adjustment RP Head Sensitivity Adjustment (25M Mode) must be completed.

1. Select "A05 RP GAIN ED" in the Service Menu.
2. Playback a LISTA Alignment Tape (VFM3581KM).
3. Select LISTA Main Menu "(1) Sensitivity Measurement" Press enter when "1.2% Speed..." is appeared to start the Sensitivity measurement.
4. Confirm that the specification is satisfied when << Sensitivity Measurement Finish>> and "Sensitivity = sensitivity value" are appeared.

1-41. LISTA Linearity Confirmation and Waving Measurement (50M Mode)

Specification	Linearity is less than 3 μ m, Waving is less than 1.5 μ m.
Mode	SERVO Adjustment Menu:"A06 RP LINEAR ED"
Test Point	(1) ATF:TP732 (2) HSW:TP722(RP HSW) (not TP723(PB HSW) (3) GND:TG510
Adjustment	S1 and T1 Post Height
Tape	VFM3581KM or VFM3581KL

1. Open the Service Menu and select "A06 RP LINEAR ED" in the "SERVO ADJUST"
2. Playback a LISTA alignment Tape (VFM3581KM).
3. Select "(2) Linearity Measurement" then Linearity waveform is appeared.
4. When the following waveform is appeared press "BS" (Back Space) key to centering the waveform. Adjust S1 and T1 Post Height so that the Linearity waveform is flat. Confirm the ENV waveform is flat.

Red dot lines shows the specification, so linearity waveform should be in the lines.

After the Linearity Adjustment measure the waving.

Waving Measurement

1. While the linearity is displayed on the monitor press "SPACE" key to hold the Peak (30 seconds).
2. Press "SHIFT" and "]" keys together and "Waving" value is displayed at left bottom of the monitor. Then confirm the waving is 1.5 μm or less, and the waving is constant from the entrance to exit. If the waving is out of specification adjust S1 (Entrance) and T1 (Exit) Post Height.
3. After measurement press ESC key to return the main menu.

1-42. PB Head LISTA Sensitivity Adjustment (50M Mode)

Specification	Sensitivity 150 ± 15 (mV/um)
Mode	SERVO Adjustment Menu "A07 PB GAIN ED"
Test Point	(1) ATF:TP732 (2) HSW:TP723(PB HSW) (not TP722(RP HSW)) (3) GND:TG510
Adjustment	SERVO Adjustment Menu: "A07 PB GAIN ED"
Tape	VFM3581KM or VFM3581KL

1. Open the Service Menu and select "A07 PB GAIN ED" in the "SERVO ADJUST" menu.
2. Playback a LISTA alignment Tape (VFM3581KM).
3. Select LISTA Main Menu "(6) ATF Error Signal Monitor" Press enter when "1.2% Speed..." is appeared to start the Sensitivity measurement.
4. When the picture is appeared as shown in figure adjust ATF Gain so that the "Sens. Value:" is in the Specification.
After Adjustment press ESC key to return the main menu.

1-43. PB Head Sensitivity Detection (50M Mode)

Specification	Sensitivity 150 ± 15 (mV/um)
Mode	Playback
Test Point	(1) ATF:TP732 (2) HSW:TP723(PB HSW) (not TP722(RP HSW) (3) GND:TG510
Adjustment	SERVO Adjustment Menu:"A07 PB GAIN ED"
Tape	VFM3581KM or VFM3581KL

Before this adjustment PB Head Sensitivity Adjustment (50M Mode) must be completed.

1. Open the Service Menu and select "A07 PB GAIN ED".
2. Playback a LISTA alignment tape (VFM3581KM).
3. Select LISTA Main Menu "(1) Sensitivity Measurement" Press enter when "1.2% Speed..." is appeared to start the Sensitivity measurement.
4. Confirm that the specification is satisfied when << Sensitivity Measurement Finish>> and "Sensitivity = sensitivity value" are appeared.

1-44. PLAY Envelope Confirmation

Specification	$V1/V_{max}, V2/V_{max}, V3/V_{max} \geq 0.8$
Test Point	TP201 R/P ENV L:H3/ R:H4
Adjustment	S1,T1PostHeight
Mode	PLAY
Tape	VFM3580KM(No.1)
M. EQ.	Oscilloscope
Tool	VFK1149 (Post Driver-)

1. Playback an alignment Tape.
2. Confirm the R/P Envelope Level is in the specification.
3. If it is not adjust ENV waveform Adjustment and LISTA Adjustment.

2. Measure Parts Replacement and Adjustment

General

Note the following items for each part replacement.

1. Turn Power Off before replacement.
2. Use the correct tool in the Jigs and Tools list.
3. After replacement clean the VTR according with the cleaning procedures.

2-1. Cylinder Unit Replacement

(Removal of Cylinder Unit)

1. Remove the T1 guide and cleaning arm unit. (Refer to the cleaning arm unit replacement.)
2. Remove 2 connectors (P5002, P5003) on the Head Buffer board and remove the screw on the flexible cable.

Note: Be careful to remove the flexible cable from the connector. Do not touch on the cylinder surface by finger directly.

3. Remove the connector P33 on the Mech. Interconnection board at bottom of VTR. Then remove 3 screws (with spring) and draw out the cylinder unit without touching any parts.

Note: Do not touch the cylinder surface by finger directly.

(Installation of cylinder)

1. Install a Cylinder unit as reverse order of its removal.

Note: Set the Mechanical Chassis pins are matched with the specified cylinder holes on the bottom of the cylinder.

2. After T1 Guide installation, T1 Guide Position Adjustment is necessary. (Refer to Cleaning Arm Unit Replacement and T1 Guide Position Adjustment.)

2-2. Cleaning Arm Unit Replacement

(Removal of Cleaning Arm Unit)

1. Remove 2 screws (A) and remove the T1 Guide.
2. Hang off the tip portion (B) of Cleaning Arm Unit and hang off the spring from Cleaning Arm Unit, then remove the Cleaning Arm Unit as shown in the figure.

(Installation of Cleaning Arm Unit)

1. Install a Cleaning Arm Unit to the T2 Arm Unit. Then remove the spring from the cleaner base plate and hook to cleaning arm unit. Push the cleaning arm unit into T2 Arm Unit.
2. Push the Cleaner Solenoid. Rotate the cylinder and confirm that the cleaner roller is rotated by the cylinder movement.
3. Install a T1 Guide.
4. After T1 Guide installation, T1 Guide position adjustment is necessary.

2-3. T1 Guide Position Adjustment

1. Set the VTR in no tape loading mode.

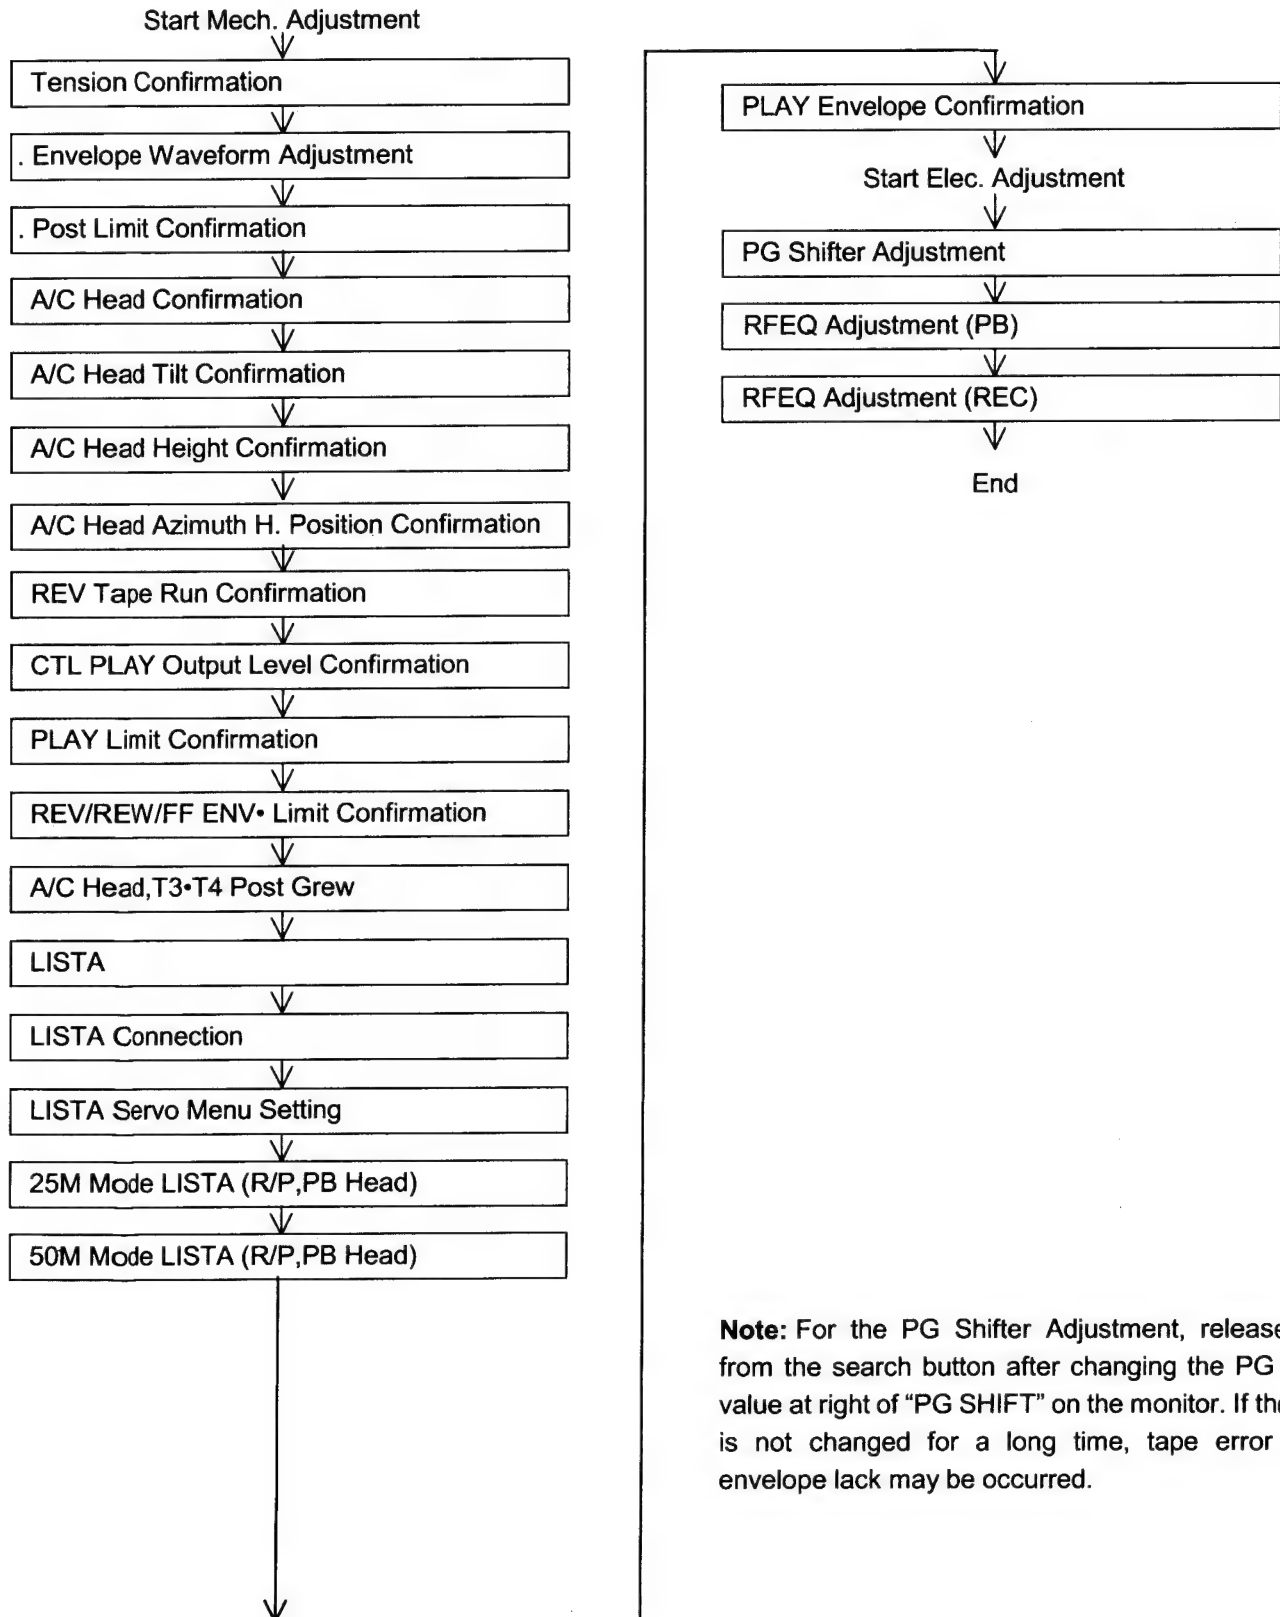

< No tape loading procedures >

- Open the "Servo Adjust" menu in the "Service Menu".
 - Select the item "T TORQUE" and press the search button to make the loading condition. Then turn power off.
2. Confirm that the clearance between T Guide and T1 Post is 0.2 mm to 0.5 mm. (A little clearance is necessary.)
 3. If it is not, loosen the 2 screws (A) and adjust the position of T1 guide by moving arrow direction (B)

2-4. Adjustments after Cylinder Unit Replacement

1. Adjust following items after cylinder unit replacement.

Note: For the PG Shifter Adjustment, release hand from the search button after changing the PG Shifter value at right of "PG SHIFT" on the monitor. If the value is not changed for a long time, tape error or ITI envelope lack may be occurred.

2-5. A/C Head Replacement

Replacement Procedures

Tool

Nut Driver (5.5mm)(VFK1150)

Hex Driver (VFK1148)

Hex Wrench (VFK1190)

(Removal of A/C Head)

1. Remove the top panel.
2. Loosen the hex screw (B) and remove the nut (C) then hang off the height adjustment spring (a). Remove the A/C Head Unit.

Note: Remember the Nut (C) height before removing it.

3. Remove 2 screws (A) and remove P1 on AC HEAD I/F board and P2030 on Mech. I/F board, then remove A/C Head.
4. Remove 2 screws (D) and remove the shield case.
5. Unsolder the Lead wire from the A/C Head. (When unsolder the lead wires, do not unsolder all at the same time.)

(Installation of A/C Head)

1. Remove the shield case from a new A/C Head and solder the each lead wires.
2. Install the shield case.
3. Install the A/C head to the A/C head plate by 2 screws (A). Then set to parallel the gap between A/C Head and A/C Head Plate.
4. Install the A/C Head unit.
5. Hang on the Head Height Adjustment Spring and tighten the Nut (C).
6. Clean the surface of the A/C Head.
7. A/C Head Adjustment is necessary.

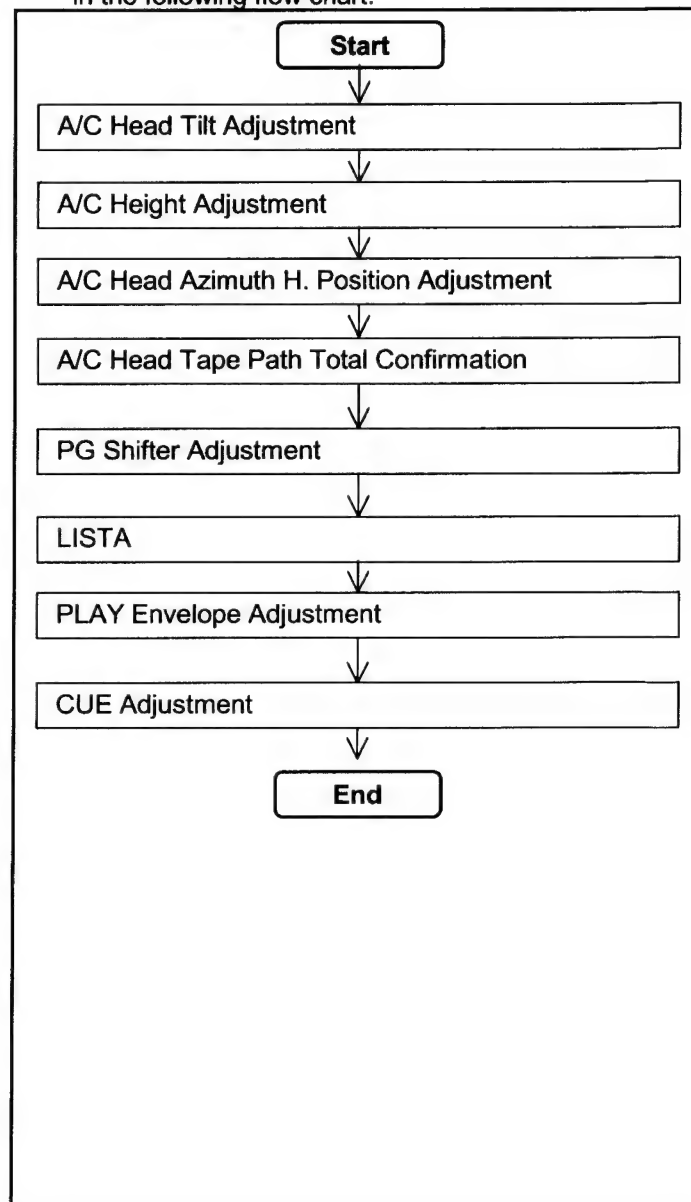

A/C Head Side	Cable Color		Connector No.
1	PINK	YELLOW	P1
2	WHITE		
3	PINK	RED	
4	WHITE		
5	PINK	GREEN	P30
6	WHITE		
7	WHITE	YELLOW	
8	BLACK		

2-6. A/C Head Adjustment

- After A/C Head Replacement, from the item of A/C Head Tilt to the item of A/C head horizontal position adjustment are necessary.

Note: Keep loosen the hex screw (B) at the side of A/C head until A/C head height adjustment completion.

- A/C Head Adjustment and Confirmation are shown in the following flow chart.

2-7. Supply and Take-up Reel Unit Replacement

(Removal of Supply and Take-up Reel Unit)

1. Remove the top panel.
2. Remove the front loading unit.
3. Remove the bottom panel.
4. Remove the connector P34 and P35 on the Mech. I/F board.
5. Rotate CW the Red Plastic Screw which is used for manual tape eject and load the S1 Post to make the space for screw (C).
6. Confirm that the S and T brake solenoid iron core are released.
7. Push the M Stopper Solenoid to release the M Stopper.
8. Remove 4 Screws (C), (D) and (E).
9. The Reel Table is hooked with inner rail. Slightly lift the Reel Table so that it does not touch the brake release arm. Then remove the Reel Table.

Note: Memorize the groove position of Reel Base which is inserted the pin of Drive Arm Unit. (The position can remember by the attached grease.)

(Installation of Supply and Take-up Reel Unit)

1. Insert the outer rail at the new Reel Table.
2. Hook the Reel Table Unit at the inner rail. Then install a Reel Table so that its groove is matched with the pin of Drive Arm Unit.
3. Tighten 4 screws (C), (D) and (E) then confirm the Reel Table moves smoothly on the Rail by hand.
4. Move the Reel Rotor Unit to front side by hand and pull up the iron core of M stopper solenoid
5. Unload completely by rotating the Red Plastic screw CCW.
6. Insert the flexible cable into P34 and P35 on the Mech. I/F board.
7. Confirm the Main Brake Torque. (Refer to the Main Brake Torque Confirmation.)
8. Adjust the Motor Torque Offset. (Refer to the Motor Torque Offset Adjustment.)
9. Confirm the Tension Value. (Refer to the Tension Confirmation.)

Mech. IF Board

Removal Reel Rotor Unit

Installation of Reel Rotor Unit

2-8. Supply and Take-up Brake Arm Unit Replacement

(Removal of Brake Arm Unit)

1. Remove the top panel.
2. Remove the front loading unit.
3. Push the supply and take-up brake solenoids to release brake.
4. Remove 2 cut washers (A) and remove supply and take-up brake arm unit.

(Installation of Brake Arm Unit)

1. Install new supply and take-up brake arm units as reverse order of removal.

Note: Hook the brake arm spring at the position shown in the figure.

2. After the Brake Arm Unit Installation, confirm the Main Brake Torque. (Refer to the Main Brake Torque Confirmation.)

Reel Brake Arm Unit Replacement

2-9. Supply Brake Solenoid Replacement and Adjustment

(Removal of Supply Brake Solenoid)

1. Remove the top panel.
2. Remove the front loading unit.
3. Remove the bottom panel.
4. Remove the connector P15 on Mech. Interconnection board.
5. Remove 2 screws (A) and remove the Supply Brake Solenoid Base Unit.
6. Remove 2 screws (B) and remove the Supply Brake Solenoid from its unit.

Supply Brake Solenoid Removal

(Installation of Brake Solenoid)

1. Install a new supply brake solenoid as reverse order of its removal.

Note: Set the supply brake spring at the position shown in the figure.

2. After installation, adjust following procedures.

(Adjustment Procedures)

1. Set the Reel Table at M cassette position.
2. Confirm the gap (A) between Brake pad and Turn table is 0.2 mm to 0.5 mm.
3. If the gap (A) is out of specification, loosen 2 screws and adjust brake solenoid unit as arrow direction so that the gap is in the specification.
4. After the above adjustment move the Reel Table to S cassette or L cassette position and confirm the gap is in the specification.

Brake Solenoid Position Adjustment

2-10 Take-up Brake Solenoid Replacement and Adjustment

(Removal of Take-up Brake Solenoid)

1. Remove the top panel.
2. Remove the front loading unit.
3. Remove the bottom panel.
4. Remove the connector P18 on the Mech. Interconnection board.
5. Remove 2 screws (A) and remove the take-up brake solenoid base unit.
6. Remove 2 screws (B) and remove the Brake Solenoid from the Take-up Brake Solenoid Base Unit.

Take up Brake Solenoid Removal

(Installation)

1. Install a new Take up Brake Solenoid as reverse order of its removal.
Note: Install a take up brake spring as shown in the figure.
2. After installation adjust the gap between brake pad and turn table. (Refer to Supply Brake Solenoid Replacement and Adjustment.)

2-11. Pinch Solenoid Replacement

(Removal of Pinch Solenoid)

1. Remove the top panel.
2. Remove the front loading unit.
3. Remove the bottom panel.
4. Remove 2 screws (A) and remove the Pinch Solenoid Unit.
5. Remove 2 screws (B) and remove the Pinch Solenoid Angle.
6. Remove 2 screws (C) and remove pinch solenoid base then remove Pinch Solenoid.

(Installation of Pinch Solenoid)

1. Install a new Pinch Solenoid as reverse order of its removal. After installation Pinch Solenoid Position Adjustment is necessary. (Refer to Pinch Solenoid Position Adjustment.)

Pinch Solenoid Removal

2-12. Pinch Arm Unit Replacement

(Removal of Pinch Arm Unit)

1. Remove the top panel.
2. Remove the front loading unit.
3. Remove the bottom panel.
4. Disconnect the connector P20 on the Mech. Interconnection board.
5. Remove the Pinch Solenoid Unit.
6. Remove 2 Screws (A) and remove the Pinch Solenoid Unit.
7. Remove the cut washer (B) and remove the Pinch Solenoid Lever.
8. Remove the cut washer (C) and remove the Pinch Arm Unit.

(Installation of Pinch Arm Unit)

1. Install a new Pinch Solenoid as reverse order of its removal. After installation adjust Pinch Solenoid Position Adjustment. (Refer to Pinch Solenoid Position Adjustment.)

Pinch Arm Unit Replacement

2-13 Loading Motor Replacement

(Removal of Loading Motor)

1. Remove the top panel.
2. Remove the front loading unit.
3. Remove the bottom panel.
4. Disconnect the connector P21 on the Mech. I/F board. Which is shown in the Supply an Take-up Reel Unit Replacement.
5. Remove the Pinch Solenoid Unit. (Refer to Pinch Solenoid Replacement.)
6. Remove the screw (B) and remove the Emergency Shaft.
7. Remove 2 screws (C) and remove the Loading Motor Neutral Unit.
8. Remove 2 screws (D) and remove the Loading Motor.

(Installation of Loading Motor)

1. Install a new Loading Motor with 2 screws (D) to the Loading Motor Neutral Unit.
2. Install the Loading Motor unit with 2 screws (C). For this installation, be careful that the pin of Mode SW unit should be matched to groove position of main Cam Gear.
3. Install the emergency shaft with screw (B).
4. Install the Pinch Solenoid Unit. After installation adjust Pinch Solenoid Position Adjustment. (Refer to Pinch Solenoid Position Adjustment.)
5. Connect the connector P21.

Removal of Loading Motor

2-14. Mode Switch Unit Replacement

(Removal of Mode Switch Unit)

1. Remove the top panel.
2. Remove the front loading unit.
3. Remove the bottom panel.
4. Disconnect P22 on the Mech. Interconnection board.
5. Remove the Pinch Solenoid Unit and Loading Motor Neutral Unit. (Refer to Loading Motor Replacement.)
6. Remove 2 screws (D) and remove the Mode Switch Unit from the Loading Motor Neutral Unit.

(Installation of Mode Switch Unit)

1. Install a new Mode Switch Unit in reverse order of its removal.
Note: Set the pin of the Mode Switch to the groove of the Main Cam Gear.
2. After Pinch Solenoid Unit, adjust Pinch Solenoid Position Adjustment. (Refer to Pinch Solenoid Position Adjustment.)

Removal of Mode Switch Unit

2-15. Main Cam Gear Replacement

(Removal of Main Cam Gear)

1. Remove the top panel.
2. Remove the front loading unit.
3. Remove the Pinch Solenoid Unit and Loading Motor Neutral Unit. (Refer to Loading Motor Replacement and Pinch Arm Unit Replacement.)
4. Remove the Main Cam Gear.

(Installation of Main Cam Gear)

1. Install a new Main Cam Gear in reverse order of its removal. For this installation, set the pin of the Income Arm Unit to the groove of the Main Cam Gear.

Removal of Main Cam Gear

2-16. S5 Post Base Unit Replacement

(Removal of S5 Post Base Unit)

1. Remove the top panel.
2. Remove the front loading unit.
3. Remove the screw (A) and remove the S5 Post Base Unit.

(Installation of S5 Base Unit)

1. Install the new S5 Post Base Unit as reverse order of its removal.
(Note) Install the S5 Post by the position fix as shown in the figure.
2. After installation, Post Pre-adjustment and Linearity adjustment are necessary.

Removal of S5 Post Base Unit

2-17. Replacement of Tension Arm Unit

(Removal of Tension Arm Unit)

1. Remove the top panel.
2. Remove the front loading unit.
3. Remove the cut washer (A) and remove the tension regulator spring from its hook then remove the tension arm unit.

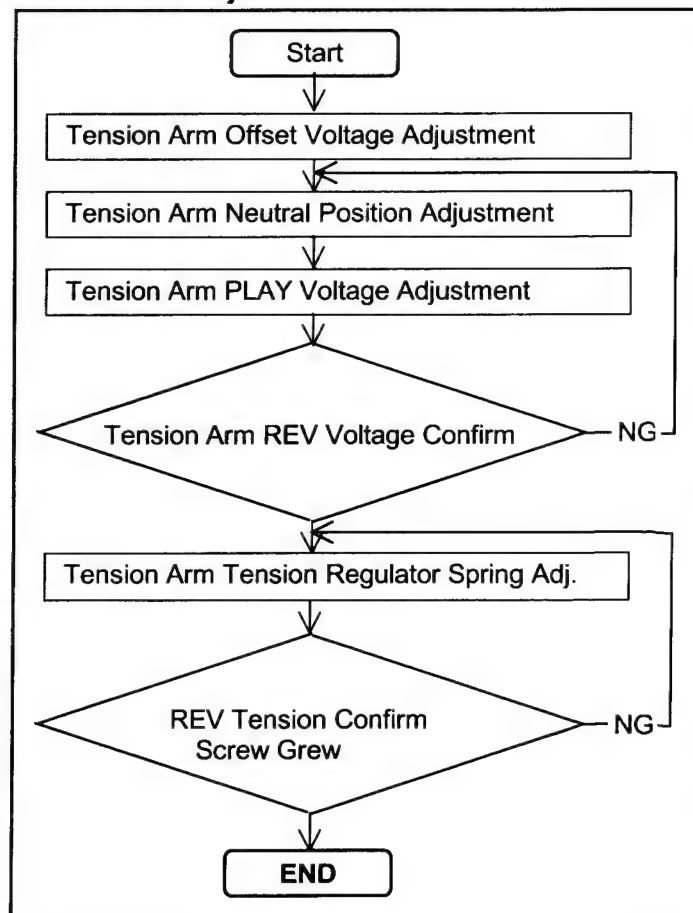

(Installation of Tension Arm Unit)

1. Install the new Tension Arm Unit as reverse order of its removal.
2. After installation adjust tension arm adjustment following the tension arm adjustment flow chart.

Removal of Tension Arm Unit

Tension Arm Adjustment Flow Chart

2-18. S1 Post Loading Arm Unit Replacement and Adjustment

(Removal of S1 Post Loading Arm Unit)

1. Remove the top panel.
2. Remove the front loading unit.
3. Remove the S5 Post Base Unit. (Refer to S5 Post Base Unit Replacement.)
4. Remove the tension arm unit. (Refer to Tension Arm Unit Replacement.)
5. Remove the screw (A) and remove the S1 Post from the loading rail.
6. Remove the E ring (A) and remove the S1 Loading Arm Unit.

(Installation of S1 Post Loading Arm Unit)

1. Install a new S1 Post Loading Arm Unit as reverse order of removal. After its installation S1 Post Loading Arm Unit Phase Adjustment is necessary.
2. After its installation confirm the S1 Post moves smoothly on the loading rail. Then Adjust the Tension Arm and Linearity.

(Adjustment Procedure)

1. When S1 Post Loading Arm is installed, the hole (A) and (B) must be parallel.

S1 Post Loading Arm Unit Removal

2-19. T1 Boat Unit Replacement

(Removal of T1 Boat Unit)

1. Remove the top panel.
2. Remove the front loading unit.
3. Remove the screw (C) and remove the T1 Post from the Loading Rail.
4. Remove the T1 Boat Unit from the T1 Loading Arm Unit.

(Installation of T1 Boat Unit)

1. Install a new T1 Boat Unit as reverse order of its removal.
2. After its installation, confirm the T1 Post moves on the Loading Rail. Then Linearity Adjustment is necessary.

2-20. T1 Loading Arm Unit Replacement and Adjustment

(Removal of T1 Loading Arm Unit)

1. Remove the top panel.
2. Remove the front loading unit.
3. Remove the cylinder unit. (Refer to the cylinder unit replacement.)
4. Rotate the emergency eject shaft CW to load the T1 Post and make a space to remove the screw (D) as shown in Fig. 6-15-1.
5. Remove the screw (A) and (C) then remove the S1 and T1 Posts from the Loading Rail.
6. Remove the screw (D) and (E) and remove the Loading Rail.
7. Remove the T1 Boat Unit from the T1 Loading Unit.

(Installation of T1 Loading Arm Unit)

1. Install a new T1 Loading Arm Unit as reverse order of its removal. For this installation the following adjustment is necessary.

(Adjustment Procedures)

1. Install T1 Loading Arm Unit so that the Hole (A) and Hole (B) are in parallel.
2. After installation, confirm that the T1 post moves smoothly on the Loading Rail. Then Linearity Adjustment is necessary.

T1 Loading Arm Unit Position Adjustment

2-21. Cleaner Solenoid Replacement and Adjustment

(Removal of Cleaner Solenoid)

1. Remove the top panel.
2. Remove the Front Loading Unit.
3. Remove the connector P11 on the Mechanical Interconnection Board.
4. Remove two screws (A) and remove the Cleaner Solenoid Unit.
5. Remove two screws (B) and remove the Cleaner Solenoid.

(Installation of Cleaner Solenoid)

1. Install a new Cleaner Solenoid as reverse order of its installation.
2. After its installation adjust Cleaner Solenoid Position.

Cleaner Solenoid Replacement

2-22. Cleaner Solenoid Position Adjustment

Tool

Eccentric Driver (VFK0357)

1. Push the Cleaner Solenoid Shaft and confirm the clearance between Cleaning Arm Unit and Cleaner Base Plate (D) is 0.5 mm to 0.7 mm.
2. If it is out of specification, loosen 2 screws (A) and move the cleaner solenoid arrow C direction and adjust the clearance (D) is in the specification.
3. Push the cleaner solenoid shaft and confirm that the cleaner roller touches the cylinder. Then confirm that the cleaner roller returns original position when the shaft is released.
4. Push the Solenoid shaft and rotate the cylinder and confirm that the cleaner roller is rotated by the cylinder movement.

Cleaner Solenoid Position Adjustment

Cleaner Solenoid Position Adjustment

Note: If the Cleaner Base Plate is moved, Cleaner Roller Position Adjustment is necessary.

2-23. Cleaner Roller Position Adjustment

Tool

Eccentric Driver (VFK0357)

1. Confirm that the clearance (A) between cylinder unit and cleaner roller is 1.0 mm to 1.2 mm.
2. If it is out of specification loosen screw (B) and move the cleaner base unit and adjust its position by the eccentric driver.

Cleaner Roller Position Adjustment

2-24. M Stopper Solenoid Replacement and Adjustment

(Removal of M Stopper Solenoid)

1. Remove the top panel.
2. Remove the front loading unit.
3. Remove the connector P24 on the Mech. Interconnection board.
4. Remove 4 screws (A) and (B) and remove the M Stopper Solenoid.

(Installation of M Stopper Solenoid)

1. Install a new M Stopper Solenoid as reverse order of its removal.
2. After its installation following adjustment is necessary.

M Stopper Solenoid Removal

(Adjustment Procedures)

1. Set the Reel Table at L cassette position.
2. Release the M Stopper by pushing the M Stopper Solenoid Shaft.
3. Loosen the screw (A) and adjust the M Stopper Solenoid Unit Position so that the Gap (A) between Mech. Chassis and M Stopper is 1.1 mm to 1.3 mm.

M Stopper Solenoid Position Adjustment

2-25. MIC Rail Unit Replacement

(Removal of MIC Rail Unit)

1. Remove the top panel.
2. Remove the front loading unit.
3. Remove the bottom panel. (Refer to the bottom panel removal.)
4. Remove the connector P17 on the Mech. Interconnection board.
5. Remove the MIC Drive REV Spring.
6. Remove 3 screws and remove the MIC Rail Unit.

(Installation of MIC Rail Unit)

1. Install a new MIC Rail Unit as reverse order of its installation.
2. Confirm that M and L cassette touches MIC Rail Unit.

MIC Rail Unit Removal

2-26. Reel Drive Motor Unit Replacement

(Removal of Reel Drive Motor Unit)

1. Remove the top panel.
2. Remove the front loading unit.
3. Remove the connector P16 on the Mech. Interconnection board.
4. Remove 2 screws (A) and remove the Reel drive sensor board.
5. Remove 2 screws (B) and remove the Reel Drive Motor Unit.

(Installation of Reel Drive Motor Unit)

1. Install a new Reel Drive Motor Unit as reverse order of its removal.

Reel Drive Motor Unit Removal

2-27. L-M Brake Release U. Replacement

(Installation of L-M Brake Release Unit)

1. Remove the top panel.
2. Remove the front loading unit.
3. Remove the screw (A) and remove the L-M Brake Release Unit.

(Installation of L-M Brake Release Unit)

1. Install a new L-M Brake Release Unit as reverse order of its removal.

L-M Brake Release Unit Removal

10. Remove the cut washer (E) and remove the supply and take-up side base drive arm unit.
11. Remove the cut washer (F) and remove the slide load.

Slide Rod Unit Removal

Reel Drive Arm Unit Removal

2-28. Slide Rod Unit Replacement and Adjustment

(Removal of Slide Rod Unit)

1. Remove the top panel.
2. Remove the front loading unit.
3. Remove the L-M Brake Release Unit. (Refer to L-M Brake Release Unit Replacement.)
4. Remove the Reel Drive Sensor board. (Refer to Reel Drive Motor Unit Replacement.)
5. Remove the cut washer (A) and remove the Reel Drive Cam Gear.
6. Remove the cut washer (B) and remove the MIC Drive Arm Unit.
7. Remove the cut washer (C) and remove the MIC intermittent gear.
8. Remove the cut washer (D) and remove the Reel Drive Arm Unit.
9. Remove the supply and take-up reel rotor unit. (Refer to Supply and Take-up Reel Table Unit Replacement.)

(Installation of Slide Rod Unit)

1. Install a new Slide Rod Unit as reverse order of its removal.
2. When Reel Drive Cam Gear and MIC Intermittent Gear are installed phase adjustment is necessary.

(Adjustment Procedures)

1. Install a MIC Intermittent Gear.
2. Set the Reel Rotor Unit at M Cassette Position by hand.
3. Install a MIC Drive Arm Unit.
4. Rotate the MIC intermittent Gear by hand so that the Distinction SW is as close as possible.

Gear Position

5. Install a Reel Drive Cam Gear so that its hole is at MIC intermittent gear hole.
6. Install 3 cut washers (A), (B) and (C).

Adjustment Note:

- 1) Close the Reel Table to M Cassette position.
- 2) Set the MIC SW (Distinction SW) to the nearest position from the Reel.
- 3) MIC Drive Arm Unit Pin position is as shown in the above figure.
- 4) Reel Drive Came Gear Hole and MIC Intermittent Gear phase are matched.

2-29. T4 Post Position Adjustment

1. Set the VTR unloading condition.
2. Confirm the T4 post hole is at the T4 connection gear (B).
3. Confirm that © and hole (A) position is as shown in the figure.
4. If the T4 post position is incorrect adjust following procedures.

T4 Post Position Adjustment

2-30. Thrust Screw Replacement and Adjustment

1. Remove the Thrust Screw.
2. Supply oil (VFK0906) as shown in the figure and set the capstan housing.
3. While rotating the capstan shaft CCW tighten the thrust screw CW slowly and stop it when the rotation becomes smoothly.
4. Rotate another 180 degrees or 270 degrees from the stop position of item 3.
5. Grew the thrust screw.
6. Confirm the oil seal as shown in figure.

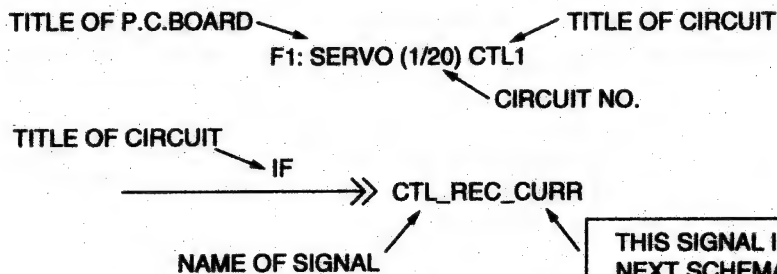

SECTION 4

SCHEMATIC DIAGRAMS

Note:

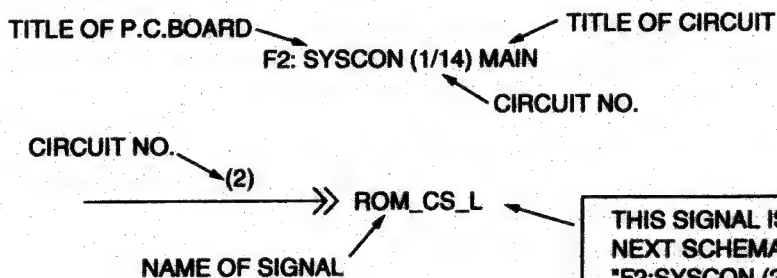

1. Do not use the part number shown on the schematic diagram or P.C.Board layout for ordering.
The correct part number for ordering is shown in the Exploded Views/Parts List section.
2. Unless otherwise specified, all resistors are in OHMS,
K=1,000 OHMS, all capacitors are in MICROFARADS (μ F), P= μ F.

(EX1)

THIS SIGNAL IS CONNECTED TO NEXT SCHEMATIC. PLEASE REFER TO "F1:SERVO (20/20) IF"

(EX2)

THIS SIGNAL IS CONNECTED TO NEXT SCHEMATIC. PLEASE REFER TO "F2:SYSCON (2/14) MAIN"

* mark ⇒ Parts value, see table in the schematic diagram.

(EX:)

	AJ-D940P	AJ-D940E	
R2018	10K	10K	← 10K Ω
R2019	20K	*PAT	← No part

NOTE:

DO NOT USE THE PART NUMBER SHOWN ON THIS DRAWING FOR ORDERING. THE CORRECT PART NUMBER SHOWN IN THE PARTS LIST.
AND MAY BE SLIGHTLY DIFFERENT OR AMENDED SINCE THIS DRAWING WAS PREPARED.

SCHEMATIC DIAGRAMS

CAUTION

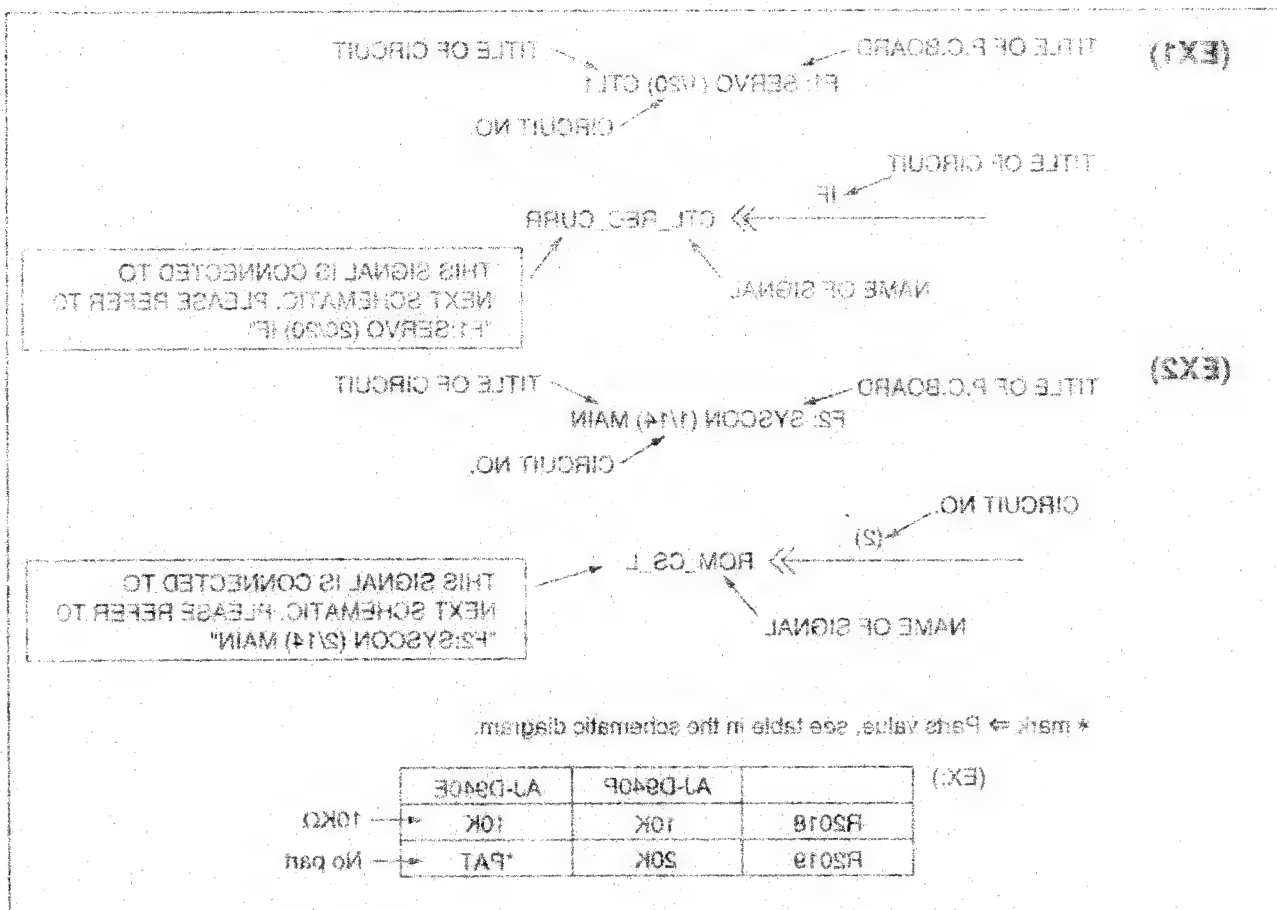

THE  MARK INDICATES THE PRIMARY CIRCUIT TO DISTINGUISH THE PRIMARY FROM THE SECONDARY CIRCUIT.

PAY ATTENTION NOT TO RECEIVE AN ELECTRIC SHOCK DURING REPAIR AND SERVICE OF THE PRODUCTS.

IMPORTANT SAFETY NOTICE:

COMPONENTS IDENTIFIED WITH THE MARK  HAVE THE SPECIAL CHARACTERISTICS FOR SAFETY. WHEN REPLACING ANY OF THESE COMPONENTS, USE ONLY THE SAME TYPE.

1. The correct part number for ordering is shown in the Parts List.
2. Unless otherwise specified, all resistors are in OHMS, all capacitors are in MICROFARADS (uF), P=1000 OHMS, K=1000 OHMS.

CARRIGE P.C. BOARD (VEP80856A)	PCB-28

NOTE:

DO NOT USE THE PART NUMBER SHOWN ON THIS DRAWING FOR ORDERING. THE CORRECT PART NUMBER SHOWN IN THE PARTS LIST.
AND MAY BE SLIGHTLY DIFFERENT OR AMENDED SINCE THIS DRAWING WAS PREPARED.

CAUTION

THE  MARK INDICATES THE PRIMARY CIRCUIT TO DISTINGUISH THE PRIMARY FROM THE SECONDARY CIRCUIT.
PAY ATTENTION NOT TO RECEIVE AN ELECTRIC SHOCK DURING REPAIR AND SERVICE OF THE PRODUCTS.

IMPORTANT SAFETY NOTICE:

COMPONENTS IDENTIFIED WITH THE MARK  HAVE THE SPECIAL CHARACTERISTICS FOR SAFETY.
WHEN REPLACING ANY OF THESE COMPONENTS, USE ONLY THE SAME TYPE.

警告

感電注意 + 感電ややけどの可能性
があります。

AC100V の加わっている活
電部 (充電部、活電部) に
直接触れないでください。

- ① 警告 印の部品は安全上重要な部品です。
交換するときは、安全および性能維持のため必ず指定の部品をご使用
ください。
- ② 内は充電部です。 AC 100V が加わっておりますので点検、修理のときは感電
しないよう充分ご注意ください。
- ③ 部品交換時には、電源プラグをぬいてから行ってください。
- ④ 一次側 (充電部) の電圧・波形は、一次側アースを基準に測定してください。
- ⑤ 部品品番は、部品価格表で確認の上交換ください。

CAUTION

THE MARK INDICATES THE PRIMARY CIRCUIT TO DISTINGUISH THE PRIMARY FROM THE SECONDARY
CIRCUIT.
PAY ATTENTION NOT TO RECEIVE AN ELECTRIC SHOCK DURING REPAIR AND SERVICE OF THE PRODUCTS.

IMPORTANT SAFETY NOTICE:
COMPONENTS IDENTIFIED WITH THE MARK HAVE THE SPECIAL CHARACTERISTICS FOR SAFETY.
WHEN REPLACING ANY OF THESE COMPONENTS, USE ONLY THE SAME TYPE.

SECTION 6

EXPLODED VIEWS & REPLACEMENT PARTS LISTS

Note:

1. *Be sure to make your orders of replacement parts according to this list.
2. Unless otherwise specified, all resistors are in OHMS, K=1,000 OHMS, all capacitors are in MICROFARADS (μ F), P= μ μ F.
3. The P.C. Board untils marked with "■" shown below the main assembled parts.
4. The parts marked with (E) on the exploded view show the electric parts.
5. **IMPORTANT SAFETY NOTICE**
Components identified with the mark Δ have the special characteristics for safety. When replacing any of these components, use only the same type.
6. The marking (RTL) indicates the retention time is limited for this item.
After the diacontinuation of this assembly in production, it will no longer be available.
